INFORMATION CENTER

SPECIAL ANNOUNCEMENT

NEW CONTRACTOR SELECTED FOR ERIC DOCUMENT REPRODUCTION SERVICE (EDRS)

The U.S. Department of Education has awarded a new contract for the operation of the ERIC Document Reproduction Service (EDRS). Effective February 1991, Cincinnati Bell Information Systems (CBIS Federal Inc.) will take over the operation of EDRS from Computer Microfilm Corporation (CMC), which has operated EDRS (the microfiching and document delivery arm of ERIC) since the mid-1970's.

The new EDRS is currently being established (see address below) and should soon be fully operational. As the new EDRS operator, CBIS Federal looks forward to serving all current and future ERIC microfiche subscribers and on-demand requestors. New customer service programs and new ERIC-related products will also be offered.

ERIC Document Reproduction Service (EDRS)

7420 Fullerton Road, Suite 110 Springfield, Virginia 22153-2852

Telephone: (703)-440-1400

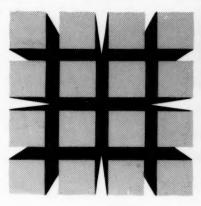

1-800-443-ERIC

FAX: (703) 440-1408

All orders for ERIC documents will be acted upon by CBIS promptly as soon as this transition is complete. However, if your need for an ERIC microfiche or reproduced document is urgent, you may wish temporarily to use one of the many "ERIC Information Service Providers"* geographically closest to you. Most of these service points have the ERIC microfiche collection and provide some document delivery services.

We regret any problems that this change of contracts may cause ERIC users, but assure you that they will be only temporary and brief in nature. The services and products to be offered by the new EDRS contractor will ultimately benefit the ERIC program, its users, and its contributors.

^{*}see Directory of ERIC Information Providers, available from ACCESS ERIC (1-800-USE-ERIC)

EDUCATIONAL RESOURCES

Resources in Education (RIE) is processed for printing by ARC Professional Services Group, under contract with the U.S. Department of Education, Office of Educational Research and Improvement (OERI), and is published monthly by the U.S. Government Printing Office (GPO) with printing funds approved by the Office of Management and Budget. The contents of RIE do not necessarily reflect official OERI policy.

Subscriptions to RIE (12 issues/year), individual issues, and semi-annual indexes (January-June and July-December) are available from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402. Inquiries regarding prices should be directed to the Superintendent of Documents.

Introduction

RESOURCES IN EDUCATION (RIE) — A monthly abstract journal announcing recent report literature related to the field of education, permitting the early identification and acquisition of reports of interest to the educational community.

Sponsor: Educational Resources Information Center (ERIC)
Office of Educational Research and Improvement (OERI)

U.S. Department of Education Washington, D.C. 20208

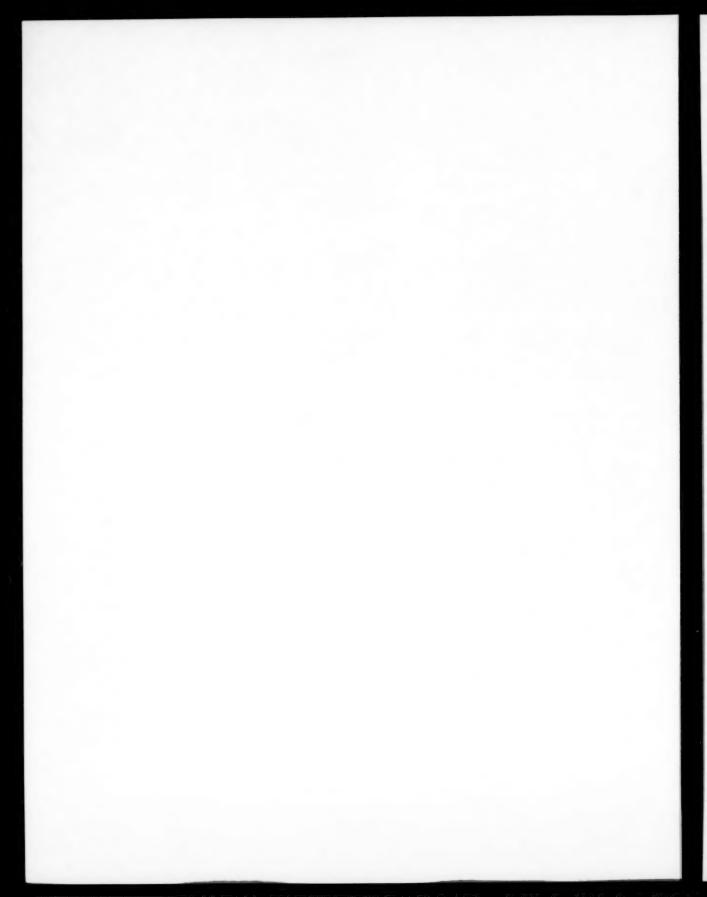

ERIC is a nationwide information network for acquiring, selecting, abstracting, indexing, storing, retrieving, and disseminating significant and timely education-related reports. It consists of a coordinating staff in Washington, D.C. and 16 clearinghouses located at universities or with professional organizations across the country. These clearinghouses, each responsible for a particular educational area, are an integral part of the ERIC system. The clearinghouses are listed on the inside back cover.

Organization of Journal: Resources in Education is made up of resumes and indexes. The resumes provide descriptions of each document and abstracts of their content. Resumes appear in a "Document Section" and are numbered sequentially by an accession number beginning with the prefix ED (ERIC Document). The indexes appear in an "Index Section" and provide access to the Resumes by Subject, Personal Author, Institution, and Publication Type.

Availability of Documents: The documents cited in *Resources in Education*, except as noted, are available from the ERIC Document Reproduction Service (EDRS), in both microfiche (MF) and paper copy (PC), or microfiche only. Availability in microfiche only may be determined by the source, for proprietary or copyright reasons, or by ERIC for reasons related to legibility and reproducibility. The price per document is based on the number of pages and is subject to change over time. An ERIC Price Code Schedule permits the user to convert all price codes to actual dollar amounts. Current price information for documents, microfiche, and subscriptions to microfiche collections is to be found in the section entitled "How to Order ERIC Documents" in the most recent issue of RIE.

How to Submit Documents to ERIC: If you have documents that you would like to have considered for announcement in *Resources in Education* (RIE), you should send clean, legible copies (in duplicate, if possible) to the ERIC Processing and Reference Facility, 2440 Research Boulevard, Rockville, MD 20850. A reproduction release, giving ERIC permission to reproduce in paper copy and microfiche (or microfiche only), and signed by the author or official representative of the source institution, is requested for all documents selected for inclusion in RIE. Standard reproduction release forms may be obtained from the ERIC Facility (a sample appears at the back of this issue of RIE).

How To Order RIE: The U.S. Government Printing Office (GPO) prints *RIE* and functions as subscription agent. Detailed subscription information appears on the page in the back of *RIE* entitled "How to Order Resources in Education."

ERIC Clearinghouse Publications

This page highlights publications announced in this issue of *Resources in Education* which were created by the ERIC Clearinghouses and which have been selected as having special significance for educators. For each brief citation appearing here, there is a full abstract appearing under the same ED number in the pages of the issues.

In addition to collecting the literature of education for announcement in *Resources in Education* and *Current Index to Journals in Education*, the ERIC Clearinghouses analyze and synthesize the literature in a number of different formats designed to compress the vast amount of information available and to meet the varying needs of ERIC users. These formats include research reviews, state-of-the-art studies, interpretive studies on topics of high current interest, research briefs, annotated bibliographies, and compilations. While some publications are comprehensive reviews designed for those who are interested in pursuing a subject in depth, others are brief analyses designed for the busy practitioner whose time for staying abreast of new developments in education is limited.

ERIC publications are published either by the ERIC Clearinghouses responsible for producing them or through cooperative arrangements with other organizations. Copies are usually available directly from the responsible Clearinghouse or from the source listed in the citation. In addition, the publications announced in *Resources in Education* are contained in all ERIC microfiche collections, and are available in paper copy and/or microfiche from the ERIC Document Reproduction Service (EDRS), 7420 Fullerton Road. Suite 110, Springfield, Virginia 22153-2852.

This publication contains a brief discussion and employment information concerning occupations for professional and technical workers, managers and administrators, skilled trades, sales workers, clerical workers, and service workers. In order for women to take advantage of increased labor market demands, employer attitudes toward working women need to change and women must: (1) receive better career planning and counseling, (2) change their career aspirations, and (3) fully utilize the sources of legal protection and assistance that are Abstractor's Initials. available to them. (SB)

Document Resumes

The document resumes in this section are arranged in numerical order by ED number, and also alphanumerically by Clearinghouse prefix and Clearinghouse accession number,

As explained in the Introduction, each Clearinghouse focuses on a specific aspect of education. The reader who is interested in one of these major aspects (e.g., Reading) may, however, find pertinent resumes among the entries of virtually any Clearinghouse, dependent on the orientation of the document. For this reason, it is important to consult the Subject Index if a comprehensive search is desired.

The following is a list of Clearinghouse prefixes and names used in this Section, together with the page on which each Clearinghouse's entries begin:

Identifiers-*Resources in Education

Resources in Education (RIE) is a monthly ab stract journal that announces (catalogs, indexes, abstracts) documents of interest to the educational stracts) documents of interest to the educational community (including researchers, teachers, students, school board members, school administrators, counselors, etc.). Each issue announces approximately 1,100 documents and provides indexes by Subject, Personal Author, Institution, Publication Type, and ERIC Clearinghouse Number. This special Computer Output Microfiche (COM) edition is prepared directly from the ERIC magnetic tape database prior to publication of the printed journal and therefore is lacking the cover and other regular introductory and advertising matter contained in the printed journal. The COM edition contains only the first three of the five indexes in the printed edition. The first accession in each issue of RIE is the issue itself. In this way, the monthly microfiche collection for each issue is immediately preceded by a microfiche index to that collection. This practice began with the RIE issue for May 1979. (CRW/WTB)

This document reports the development of an in-Into document reports the avevelopment of an in-structional design model for facilitating students' higher order thinking in vocational education pro-grams. It is intended to help those who establish training requirements, identify training problems, diagnose student learning needs, develop training programs, and evaluate program effectiveness. The development process described is considered replicable in other vocational knowledge domains. first chapter introduces the research project that produced the document and discusses the significance of developing the design model. Chapter 2 outlines the research underlying knowledge domain development. Chapter 3 describes domain structure and development, including: identification of a goal action structure; development of a task environment structure; and identification of domain-relevant thinking processes. Chapter 4 reports the develop-ment and validation of appropriate instructional materials. Among the eight appendices are a list of: the main goals for a goal action structure on sup-porting children's social development; the subgoals associated with each main goal; recommended ac-tions for each goal and subgoal; a list contrasting actions that foster control of students with those that support students; and rules for establishing pri-orities among competing goals. (A 70-item bibliog-raphy is included). (CML)

This document reports on a national symposium that constituted the first phase of a research study designed to determine how to use intrinsic motiva tion and self-empowerment concepts to retain spetion and self-empowerment concepts to retain spe-cial needs learners who are potential dropouts in postsecondary vocational education programs. The first chapter (by Brown and Wotruba) contains the project's rationale, an overview of related activities, and a 56-item bibliography. The second chapter (by Brown and Retish) provides a summary of the issues identified during the symposium, the implications for postsecondary vocational education, recommen-dations regarding research that should be con-ducted, and a seven-item bibliography. The ducted, and a seven-item bibliography. The remainder of the document consists of appendices remainder of the document consists of appendices devoted to presentations and reactions to presentations made at the symposium. Appendix A is entitled "Intrinsic Motivation and Special Education" (Deci). Appendix B is "Empowering People with Disabilities" (Hockenberry). The reactions to that presentation by a panel of experts (Goldberg, Beck, Brunberg, Imdike, Krantz, Erlichman, Wilke, and Orke) and the audience are in Appendix C. Appendix D contains "Metacognition and Empowerment: Implications for Vocational Training" (Borkowski). Appendix E contains a reaction to Borkowski's presentation (Turnure). Appendix F provides a summary of the symposium and review comments (Evans). (CML)

[dentiflers—Behavioral Event Interview

Identifiers-Behavioral Event Interview This paper asserts that task analysis and related task-based approaches to assessing leadership attributes provide a limited view of how leaders function in educational settings. It proposes that several assessment approaches show promise in identifying vocational education administrator leadership attrivocational education administrator readersing attri-butes. Strengths and limitations associated with var-ious leadership assessment strategies are examined. Several strategies are discussed that focus on the more subtle aspects of vocational education leader-ship. Use of one such strategy, the Behavioral Event Interview, is discussed in relation to an ongoing project that seeks better ways to prepare vocational education administrators. Examples of information gathered via personal interviews with practicing ad-ministrators are used to highlight the Behavioral Event Interview's utility in applied settings. The pa-per includes 28 references. (KC)

"Technological Advancement Identifiers—"Deskilling, Textile Industry Changes in the economy and the workplace are changing job skill requirements and the process of changing job skill acquisition. A study analyzed occupational trends and projections, performed case studies of four industry sectors (apparel and textile, account-ing, management consulting, and software developmg, management consulting, and sortware develop-ment), and reviewed research on changing skill demands and educational responses. Conflicting views of job skills emerged-whether jobs would in-creasingly become "deskilled" or require increas-ingly higher order skills. Intensified competition, changing demand for goods and services, and an changing demand for goods and services, and an accelerated rate of change necessitate economic restructuring. Coping with these conditions requires changes in the organization of companies and industries and in relationships between suppliers and customers. There are implications for education and tomers. Incre are implications for education and training in the changes in the relative numbers of high- and low-skilled positions, a more uncertain and less well-defined environment, and more com-plex interactions among people. Whether and how much of the preparation of the work force should take place in schools or the workplace is at question. One conclusion is that rather than deskilling, technological advances demand more conceptual and problem-solving abilities at all leads of the conceptual and problem-solving abilities at all levels of the employ-ment hierarchy. The traditional distinctions between academic and vocational education are being challenged, and learning must now be viewed as a continuous, lifelong process. (Includes an appendix on occupational structure, 6 tables, and 86 references.) (CML)

Work force growth will slow dramatically in the 1990s. To ensure a more prosperous future, productivity and competitive position must be improved.

New high performance forms of work organization operate very differently from the system of mass manufacturing. These work organizations require large investments in training. The approach to work and education must fundamentally change. Recommendations include the following: (1) a new educational performance standard should be set for all students, to be met by age 16, with the standard established nationally and benchmarked to the highest in the world; (2) states should take the responsibility for assuring that virtually all students achieve the Certificate of Initial Mastery (CIM), with new local Employment and Training Boards creating and funding alternative learning environ-ments for those who cannot attain the CIM in regular schools; (3) a comprehensive system of Technical and Professional Certificates and associ-Technical and Professional Certificates and associate's degrees should be created for the majority of students and adult workers who do not pursue a baccalaureate degree; (4) all employers should be given incentives and assistance to invest in the further education and training of their workers and to pursue high productivity forms of work organization; and (5) a system of Employment and Training Boards should be established by federal and state governments, together with local leadership, to organize and oversee the new school-to-work transiganize and oversee the new school-to-work transi-tion programs and training systems. This document contains the viewpoints of five providers of education and training of adults at Britansia.

ish institutions on the subject of which indicators should be used to measure the quality of performance. According to the representative of the Unit for the Development of Adult Continuing Education (Powell), measures applied to adult education have tended to concentrate on economy and effi-ciency, but because these measures are based on the concept of full-time students and courses, they have become outmoded. If performance indicators are not to distort institutional objectives, they must re-flect the value of the education and training pro-vided as understood by learners, teachers, and those who pay for the education-individuals, employers, or the community at large. The REPLAN perspective (Buffton) is that enrollment is a key area in assessing a college's effectiveness in meeting the needs of the community. According to Buffton, col-leges' mission statements (which should include statements about access, equity, and entitlement) can be translated into measurable achievements. A map for the development of performance indicators is provided. The view from an unnamed institute (Gibson) is that performance indicators should give a clear profile of strengths and weaknesses in orgaa clear profile of strengths and weaknesses in orga-nization (including cost and resource monitoring) and quality of service. A description of adult educa-tion in West Sussex (Holliday, Harris) shows that adult education is delivered through 3 colleges of further education and 16 community schools and colleges whose staff agreed on performance indicators that may be summarized as inputs, processes, and outputs. Finally, an urban perspective, supplied by Wilson, explains that the Manchester local education authority uses both quantitative and qualitative measures of performance. (CML)

A descriptive research study of the educational outreach activities conducted by Ohio theatres used a mail questionnaire to survey the 36 professional and large community theatres within the state. Thirty responded, for a response rate of 83.3 per-cent. For each theatre, the instrument sought infor-mation on the kind of theatre, the number of staff, number of paid hours worked by staff, the number of main stage and other productions performed each year, staff titles, the kinds of staff training offered, the criteria used to select productions, and activi-ties. Those activities that were reported by more than half the respondents included developing bro-chures (93.3 percent), posters (86.7 percent), news-paper advertising (70 percent), radio commercials (60 percent), program notes on performers and staff (93.3 percent), program notes on subject matter (83.3 percent), program notes on authors (76.7 per-(83.3 percent), program notes on autnors (76.7 percent), newspaper critiques (80 percent), public speaking by staff (76.7 percent), and postperformance receptions (66.7). Various conclusions were inferred from the data, among them that: (1) more audience education is necessary in view of the criteria for play selection, which include "challenge to audience"; (2) more training of volunteers is needed; (3) although theatres purport to be educational, most of their activities concern marketing or audience development: (4) there are very few educations of the concern and the concern audience development: (4) there are very few educations of the concern and the concern audience development: (4) there are very few educations of the concern and the concern audience development: (4) there are very few educations of the concern and the concern audience development: (4) there are very few educations of the concern and the concern audience development: (4) there are very few educations of the concern and the concern a audience development; (4) there are very few edu-cation directors and volunteer coordinators in the theatres surveyed; and (5) fewer than half those surveyed do any outreach for special constituencies, including providing Artists-in-the-schools programs. Each dimension has two variables, the control of the company of

of cognitive ability. Each dimension has two variables. The variables of cultural stability are (1) technological adoption and organizational adaptation and (2) structure of work and work processes. For cognitive ability, the variables are training and skills. This model suggests that successful technology adoption and organizational adaptation require a fit between culture and cognitive ability by the employees. Such a fit will enable the organization to offer the necessary training where it is needed most, thereby allowing employees to acquire the necessary skills to perform well with the new technology. The legal environment will affect the interrelation-The legal environment will affect the interrelation-The legal environment will affect the interrelationship between technology adoption and organizational adaptation profoundly. Culture may be an important factor since labor laws may differ across provinces and most certainly between countries. Thus, action strategies employed by a company must differ due to local labor laws. In less-developed countries, firms may introduce technology and automatically lay off redundant workers in large numbers. In Canada, if technology adoption results in more than 50 layoffs within any 4-week period, the group termination falls under the Canada Labour Code and a joint committee consisting of displaced workers and management must be established to determine severance pay, retraining support, and

determine severance pay, retraining support, and any other compensation. The practical implication for managers is the need for an integrated training strategy considering cultural factors. A firm must

strategy consumering cultural factors. A first miser provide three types of training; job-specific training; in training in company cultural habits and action strategies; and training for understanding and using the organizational culture to everyone's advantage.

of State, *International Military Education and Training Prog A review of the International Military Education and Training (IMET) Program, which trains foreign military personnel in skills related to equipment provided to their countries by the United States, is reported in this document. The review sought to determine whether the Departments of State and Defense had complied with program policies and procedures and met the U.S. foreign policy objective of exposing IMET trainess to U.S. values, including human rights, The review also obtained U.S. tive or exposing IME1 traines to U.S. values, in-cluding human rights. The review also obtained U.S. and foreign officials' views on the program's bene-fits and the desirability and feasibility of expanding nation-building training in the program in such fields, for example, as medicine, engineering, and logistics. The review found that the IMET program generally complies with government policies and procedures. However, the lack of (1) procedures for reviewing new training requirements that are added after programs are approved; (2) a system for evaluating the success of the program; and (3) guidelines for monitoring the use of IMET graduates contributes to the departments' inability to ensure that IMET funds are efficiently and effectively used. Recommendations are made for a coordinated ef-fort between the two departments to develop proce-dures to remedy these defects. (KC)

Economic changes in the United States over the past decade and growing concerns about the state of education have led many people to look for successful models for workplace education. As a result, here is a new and deeper interest in apprenticeship training. The form and practice of apprenticeship training. The form and practice of apprenticeship has changed little over time. Today, as always, young people who seek mastery of a particular trade or skill are trained by experienced practitioners over a period of years, typically 3-5 years before "journeyman" status is reached. Apprenticeship training combines hands-on training, classroom work, and neyman' status is reached. Apprenticeship training combines hands-on training, classroom work, and practical work experience, and it is governed by formal standards. The elements of the training are always changing to meet changing conditions. To-day the AFL-CIO trains 80 to 90 percent of all registered apprentics in the United States. The training is provided through jointly administered, local union-management apprenticeship committees which help union workers acquire high-level, high-pay skills, and these in turn help to ensure employers a steady stream of highly qualified employers centralized funding ensures that training standards are met nationally, while providing training materials at lower cost than if they were produced locally. Instructor training is provided through colleges or universities to journeyworkers who train apprentices. Since the early 1970s, minority groups have increasingly entered union apprenticeship programs; today 22 percent of registered apprentices are minorities and 7 percent are women. Union-sponsored and union-related apprenticeship training for entry workers and skill upgrading for experienced workers will help the nation meet the looming skill shortage of the 1990s. (KC)

Identifiers—*New York City Board of Education In 1989, the New York City Division of High Schools developed three summer programs de-signed to meet the needs of disadvantaged students: signed to meet the needs of disadvantaged students: the Institute for Career Exploration (ICE), the Basic Skills Academy/Comprehensive Competency Program (BSA/CCP), and the Career Employment Center (CEP) Summer School Program. The ICE program had three components: ICE J (Jobs), ICE-C (Cultural), and ICE C-Cultural-English as a Second Language. During the summer, 6,159 students attended ICE classes at 52 sites. Seventy-eight percent of students improved in writing, thus eight percent of students improved in wriang, thus meeting program goals. Just under 60 percent of the students completed an occupations course for credit, just missing program objectives. The third objective-that 70 percent of the students would meet attendance requirements—was not met. The BSA/CCP was designed to provide individualized instruction in reading, mathematics, and/or English as a second language for 100 students at 3 high schools. The program did not meet its primary objective that 70 percent of students would show a 0.4 grade level increase in these subjects; however, the grade level interests in tieses subjects, nowever, the program's objective of providing academic remedia-tion was considered highly successful by staff. The CEC program provided academic remediation and enrolled homeless students in school; the program met and surpassed both of its objectives. (KC)

Employment Dropout Prevention (AIDP) Program Incomment Dropout Prevention (AIDP) Program In New York City provided job-readiness training in New York City provided job-readiness training

in New York City provided job-readiness training and job placements in an effort to motivate students to improve academic achievement and school attendance. Programs were implemented at schools with dance. Programs were implemented at schools with a student attendance rate at or below the citywide median of 87 percent. During the 1988-89 school year, 17 community-based organizations provided job-readiness training, counseling, and job placements to students in 24 targeted high schools. Overments to students in 24 targeted high schools. Overments to students in 24 targeted high schools. Overments to students who attended by the program. Eighty-four percent (5,786) received job readiness training; of the students who attended at least one readiness session, 51 percent (2,970) obtained jobs. Students worked an average of 19 weeks, had a mean 84 percent school attendance, and passed 68 percent of courses, comparable to the previous year of the program and on a par with the general school population. However, in several schools, student program participants fared better than the rest of the students in both categories. The program was found to be effective in increasing students' job readiness and self-confidence. The quality of the program was and self-confidence. The quality of the program varied greatly from site to site. Recommendations were made to improve the program by expanding the job preparation/career awareness component, provid-ing teacher/coordinators with more time to administer the program, developing a uniform monitoring plan, and creating an internship component for younger students. Identifiers-New York

This report examines the issue of child labor and This report examines the issue of child labor and makes recommendations for changes in New York's child labor laws. It reviews the relationship of child labor to education, the relationship of child labor to social development, child labor and workplace safety, and the role of young workers in the economy. It concludes that simply relaxing child labor laws, as some states have done, to meet the needs of employers for entry-level, part-time workers in a tight job market ignores the fact that the best place children can develop those skills is in school. The report recommends placing the highest priority on protecting children and ensuring that their work experiences enhance rather than detract from their educational experience. Guaranteeing children an educational experience. Guaranteeing children an education will result in a labor force of workers with education will result in a labor force of workers with the flexibility to keep up with changes in technol-ogy. At the same time, the report recommends mak-ing some changes in allowable working hours for child workers and making laws more flexible to ben-efit both young workers and employers. (KC)

Study, Vocational Education Identifiers—North Carolina

This curriculum guide is designed to help horticul-ture teachers in North Carolina high schools plan and deliver instruction. The guide contains a list of the 39 competencies included in Horticulture I and the 44 competencies included in Horticulture II. It also contains five units of instruction for Horticul-ture I and eight units for Horticulture II. For each unit of instruction, the following are identified: course name and number, teaching unit title, ap-proximate teaching time, competency statement, and instructional objectives. This page is followed and instructional cojectives. In its page is followed by a content outline, teaching activities, and resources. A reference list keyed to the resources section includes titles and/or vendor names for textbooks, slide sets, filmstrips, videotapes, periodicals, and computer programs. (KC)

Model Curriculum Standards, Program Framework, and Process Guide for Industrial and Technology Education in California.

This three-section document contains the model curriculum standards, program framework, and pro-cess guide that will assist schools in California in providing career-vocational education programs that are responsive to a world marketplace charac-terized by constantly changing technology. The standards and frameworks can be implemented to

provide a K-12 sequenced curriculum that is coordiprovide a K-12 sequenced curriculum that is coordinated and articulated to form a total program. The standards address general employability, occupational clusters, job-specific skills, and student leadership skills. In addition, they complement and reinforce the core academic skills that are applicable to each of the career models. The guide's first section, the model program framework, sets forth the broad conceptual components of the program and defines the application of each component. The model curriculum standards section describes in detail the objectives, application, and organization of the model standards. Each standard is organized in a format that includes an initial statement, the stana format that includes an initial statement, the standard, and cademic core skills enhancement. Standards are provided for children, for explorations, and for specialized fields. The curriculum process guide section provides information on: (1) the curriculum comparison process; (2) using the state model to construct a course outline; (3) using the model curriculum standards to construct a lesson plan; and (4) teacher-developed student materials. Appendices provide: (1) California Basic Educational Data System codes; (2) a program sequence example; (3) sample district course outline; (4) a glossary; and (5) 30 references. (KC)

A project was conducted to recommend the acquisition and installation of state-of-the-art computer laboratories, software, and teacher training that will better prepare students in Delaware formployment in information processing occupations. Four major activities were undertaken: (1) a survey of 1,426 Delaware office workers to determine the computer hardware and software being used by and computer hardware and software being used by and skill requirements for entry-level office workers; (2) a survey of 31 comprehensive high school and area vocational schools to determine the type and number of computers in the business department and the ber of computers in the business department and the computer applications integrated in each business course; (3) the formation of a steering/technology committee to review the survey results and any proposals; and (4) the formation of a task force of business teachers, business and industry representatives, computer specialists, and school and state administrators to discussa labor market needs in office occupations and propose information processing methodology and instructional activities. As a result of the study, recommendations were made for hardware and software purchase. Specific recommendations and budgets for these purchases were drawn up for comprehensive and vocational high schools. (Appendices include lists of hardware and software used in businesses and high schools and proposed curriculum sequences for data processing occupations.) (KC) tions.) (KC)

The broad objectives of this curriculum are to: (1) develop skills that lead to effective decision making, problem solving, and management in the home, school, community, and workplace; (2) develop concepts and skills basic to home and family responsibilities; and (3) develop personal skills that will enhance employment potential. The syllabus notes

that New York State requires that every student complete a home and career skills unit by the end of eighth grade. Performance objectives and supporting competencies are listed for each topic and are mandatory. Following a course overview, four modules are described. The first module deals with process skills, including decision making, problem solving, and management. The second module is on personal development, examining the meaning of self-concept and the relationship of self to others. The third module, on personal and family resource management, examines responsible consu money management, nutrition management, cloth-ing management, and personal environment management. The fourth module is on career planning, and deals with introduction to work, tentative plans, and entrepreneurship. Each module includes an overview; performance objectives with supporting competencies; suggested instructional strategies with emphasis on hands-on activities; and sugges-tions for students with special needs. This document describes a comprehensive preserrice and inservice training program for local admin-istrators of adult education in Florida's regions III and IV. The program served as a pilot project for later statewide participation. The program incorpo-rated academic work, directed field-based experi-ences, and eight 12-hour seminars. The introduction describes the target population, gives a rationale for the program, and explains how administrator com-petencies were identified. The second section describes the instructional content of the program, grading, the requirements for program completion, and the instructional delivery system. The third section contains summaries of the planning and evaluation reports of each of the eight seminars. Seminar were leadership, communications, management, finance, program areas/student services, curriculum, community relations, and professional development. The fourth section reports the results of the final program evaluation administered to the participants at the completion of the year. The appendices provide: copies of the admission, feedback, and site visit forms; administration competency questionnaire; rosters; competency lists; and memo-randa considered essential to the program. (Portland)

A survey was distributed to 27,832 employees of 33 Portland-area businesses in 1987 to determine 33 Portland-area businesses in 1987 to determine how many employees had responsibilities to care for elderly persons and what those responsibilities were. A total of 9,573 survey forms were returned and analyzed. The results of the survey showed that nearly one in four employees reported earing for at least one person who is 60 years of age or older. More than one-third of the caregivers also care for children under age 18 living in their homes. Compared with employees with no elder care responsipared with employees with no elder care responsi-bilities, caregiving employees are, on average, 5 years older, more likely to be women, and more likely to have worked longer for their present employer. Caregiving employees are not very different from employees with no elder care responsibilities with respect to the types of positions held, whether they work full or part time, the shift they work, and their ethnicity. Caregiving tasks ranged from check-ing with persons on the telephone, visits, providing meals, absoning or transportation, to complete meals, shopping, or transportation, to complete care. Forty-two percent of the caregivers report that they are the only or main caregiver. Employees who they are the only or main caregiver. Employees who are caregivers to the elderly generally miss more days of work, are interrupted more often at work to deal with family-related matters, and find it more difficult to combine work and family than employees with no elder care responsibilities. The findings cument the potentially serious deleterious effects of elder care responsibilities for employees and as a result, their employers, and the need for employer support in this area. (KC)

Kingdom, West Germany
The United States' economic performance in the world economy is compared with that of Canada France, Germany, Italy, Japan, and the United Kingdom (the Summit 7 countries). Competitiveness is assessed by four economic indicators: stan-dard of living, trade, manufacturing productivity, and investment. The United States continues to ou-tinvest the other Summit 7 countries only because threes the oner summir countries on your because the U.S. gross domestic product is so much higher than any other individual country's. The other countries have higher savings rates than the United States. Although the United States invests more in education, there is a performance gap. High dropout rates, inadequately prepared graduates, and the shortage of trained scientists will have severe ramifi-cations for future U.S. industry. U.S. levels of spendcations for future U.S. industry, U.S. levels of spending for education as a percent of GDP have declined slightly since 1972. Over the past 2 decades, U.S. manufacturing productivity has declined relative to the other Summit 7 countries' average. In 1989, for the first time since 1981, U.S. manufactured exports the first time since 1981, U.S. manufactured exports grew more rapidly than the average of the other Summit 7 countries. The U.S. standard of living continued to decline. Although the United States still has a higher standard of living than the other Summit 7 average, its standard of living has, on average, not grown as rapidly as that of the rest. Since 1972, the U.S. standard of living has grown by 34 percent. The other Summit 7 countries averaged a 50 percent increase over the same period. (CML)

A review of the literature on the use of the work-

A review of the literature on the use of the workplace as a learning site in vocational education identified alternative models used to combine workplace learning with school-based programs and identified a framework and criteria for evaluating programs using the workplace as part of their instructional process. Although there is some evidence that the use of cooperative education and internships is inuse of cooperative education and internships is in-creasing in postsecondary schools and colleges, the basis for increased use is probably more a function of perceptions than empirical data. One of the as-sumptions is that work experience is a powerful mo-tivator. Few studies have explored the contribution of experientially based work programs to the social pment, educational advancement, or psychodevelopment, educational advancement, or psychological maturity of participants. Little research has specifically examined the link between participation in the many unique forms of work-based experiential learning and later success in the labor market. The methodology most often used to study experiential learning is self-report of participants. Little attention has been focused on postsecondary schools' use of experiential learning. There is a need to examine more closely what intern, faculty, and to examine more closely what interns, faculty, and field supervisors do to ensure that students learn and that host organizations are appropriately served. This study, applied previously identified cognitive.

This study applied previously identified cognitive theory and research to the development of an in-structional design model for teaching mental asstructional design model for teaching mental as-pects underlying work and family activities in a context of rapid change and high technology. The model was tested by developing a prototype, materi-als required by the prototype were developed, and the design was tested for effectiveness in facilitating development of the mental aspects underlying activities within the selected domain. In the development of the model, four factors were identified as particuof the model, four factors were identified as particularly significant in supporting learners' knowledge construction: fidelity of the learning situation to the real world, visualization, range and depth of learners' experiences, and mediation of learners' interpretations of their experiences. Knowledge constructed by learners was intended to: (1) integrate goals, intentions, and actions with features of external world and domain-knowledge concepts and principles; (2) focus attention on deep-level fea-tures; (3) facilitate interpretations in terms of powtures; (2) facilitate interpretations in terms of powerful, superordinate-level concepts and principles; and (4) support sensitivity to subtle but important variations among cases. A computer-based videoisc learning environment was developed as a prototype, and its intermediate level of instruction was tested. Findings supported the effectiveness of the learning environment in elaborating, modifying, and reorganizing knowledge structures in ways that enhance capacities to detect deep-level features and to apply knowledge in making judgments regarding ac-tions that fit a situation. tionship Since 1983, two waves of reform and analysis have swept through education in the United States. The literature from these reform efforts has probed The literature from these retorm efforts has probed some of the more complex reasons for the lack of achievement of the education system and called for many often-unrelated changes. However, the literature has not offered a cogent and integrated agenda for reforming education. In order to offer a plan to restructure the system as a whole rather than to tinker with single issues, the Aspen Institute convened two groups of educators, business representatives, and civic leaders in March and May 1989 to discuss the condition of and reform in education. These groups and three later groups of business leaders arrived at a consensus on the need for the following items: (1) clear and compelling national goals for public education; (2) sensible assessment of individual schools against local expressions of national goals; (3) a fundamental restructuring of national goals; (3) a fundamental restructuring of the education system at all levels, usually including site-based management, a reaffirmation of the aca-demic purpose of schooling, and an acknowledg-ment of a reasonable role of the school site for the delivery of social services to school-age children and their families; (4) business involvement in the delivery of social services to school-age children and their families; (4) business involvement in the development and sustenance of long-term, broad-based education reform coalitions at the community, state, and national levels; (5) harnessing technology for improving teaching, learning, and administration; (6) a commitment to improving the educational outcomes for all children, particularly for those children most at risk; and (7) strengthen-ing and empowering teachers and school leaders. This document reports results of a study that examined the status of and need for vocational education by juveniles and adults in state correctional institutions and local jails in Ohio. The study report includes the following: (1) an overall picture of crime and criminal justice in Ohio; (2) a rationale for providing vocational skill training for incarcera-ted juveniles and adults in Ohio; (3) significant trends and occurrences that have had an impact upon vocational education in corrections since 1982; (4) numbers and characteristics of incarcera-ted juveniles and adults in Ohio; (5) a current profile of vocational programs in correctional institutions in Ohio; (6) teachers' perceptions of the vocational in Ohio; (6) teachers' perceptions of the vocational education delivery system in correctional institutions in the state; and (7) a profile of educational programming in Ohio's jail system. Thirteen recommendations for improving vocational education services for the incarcerated are presented. These recommendations address a broad range of concerns, including: vocational program structures, program offerings, policy, facilities, skill certification, program supervision, teacher education, communication networks, and follow-up of released offenders. Appendixes to the report describe the youth services facilities and adult correctional facilities in Ohio. (KC)

Act 1984 *South Carolina

Act 1984, *South Carolina This document describes the Business and Indus-try Forum conducted by the South Carolina Council on Vocational and Technical Education to solicit public input on the present and future needs of business and industry, how the companies represented perceive the role of secondary vocational and post-secondary vocational education in today's society, and the private sector role in the education of to day's work force. Following introductory material on the council and the Carl D. Perkins Vocational Education Act that mandates the council, the document describes the demographics and employment situation in South Carolina. The next section explains the purpose of the forum, how participants were selected, who participated, how they were pre-pared, and the forum audience. The largest section contains 23 questions and responses from the forum participants, covering: current requirements for employment; training and retraining programs; drop-outs, handicapped persons and other special needs populations; the companies' relationship to vocational and technical education; promotions of em-ployees; and employers' needs during the next 5 to 10 years. The council's recommendations include emphasizing basic skills in all occupational pro-grams and also teaching interpersonal skills and de-sirable work behavior; making sure teachers of programs in which computers are used are profi-cient at computers; adding occupational specialists to help students make career decisions; and adding cooperative and apprentice programs. The appendi-ces contain an agenda, glossary, and eight refer-ences. (CML)

(East), Germany Reunification of Germany, democratic changes in Reunification of Germany, democratic changes in Eastern European countries, and new government policies of the Soviet Union will lead to the reduc-tion of U.S. troops in West Germany. As a Depart-ment of Defense contractor providing associate degrees to soldiers in Europe, Central Texas College (CTC) will be severely affected by the troop reduc-tions. CTC administrators have initiated actions that will slow down the possible removal of the instithat will solve down the possible removal of the insti-tution from Europe. As a vocational college with a wide selection of specialized programs, CTC's courses can easily be related to specific military jobs, as now required by the armed services. A pro-posal is being drafted to offer a transition program that will service arrives who are leaving the that will assist service members who are leaving the Army. Training of child care personnel has been requested by military communities. With good planning and the ability to respond to changing requirements, CTC has not experienced any hardships as a result of the political changes in Europe. However, severe shortages in tuition assistance funds have severe shortages in tuition assistance funds have made it more difficult for individual soldiers who wish to pursue undergraduate degrees. Tuition benefits for graduate students were discontinued in Pebruary 1990. Students are being encouraged to apply for Pell grants and Stafford loans and to take advantage of the GI Bill benefits. However, the number of students using financial aid will never be large enough to offset enrollment losses caused by shortage of tuition assistance money. (16-item bibliography) (CML)

*Evaluation Criteria, Evaluation Methods, *In-Tevaluation Criteria, Evaluation Mennols, "Industrial Arts, Postsecondary Education," Preservice Teacher Education, Program Evaluation, Research Methodology, "Technology, Test Construction, Trade and Industrial Education A study developed and validated measures that can be used to assess the effectiveness of the change from an industrial arts teacher education program to

from an industrial arts teacher education program to technology teacher education. A modified threephase Delphi design was used to answer two ques-tions: (1) is the program technology teacher educa-tion (i.e., has the change progressed to the point where the program, taken as a whole, meets the criteria for inclusion in the category of technology teacher education, rather than industrial arts, vocational, or technical teacher education)? and (2) To what degree has the program moved effectively accomplish the change to technology teacher edu-cation in terms of the criteria established by the accrediting agencies and by the consensus of experts consulted for this research? Initially, a panel of 22 technology education leaders was selected and asked to suggest criteria that could serve to indicate that the change to technology education had been accomplished effectively. The panel also proposed

assessment procedures that could be used in the evaluation process. In the second phase, the criteria and procedures were compiled and submitted to the panel members for their rankings of the importance of the items and for their suggestions. From these responses, the assessment instrument, the Technology Teacher Education Checklist (TTEC), was developed, compared to guidelines of the International Technology Education Association, and revised. The TTEC should be useful to the faculty of a technology teacher education program or to an external evaluator in conducting assessment of the change to technology education. (Includes 34 references and a list of panelists, the questionnaires, and panelists' rankings, responses, and comments.) (KC

This curriculum guide provides an overview of the 16-level occupational component of the integrated occupational program for grades 10-12 in Alberta. The integrated occupational program is a vocational education program for students who have experieducation program for students who have experienced difficulty in learning. The program consists of both core and complementary courses designed to develop the skills necessary for everyday living at home, in the community, and on the job. The first 10 sections of the guide provide information on the following aspects of the integrated occupational program: rationale; philosophy; goals; model for the occupational component; interpersonal skills and the social sphere; required and elective components; learning resources; planning; methodology; and

evaluation. The final, largest section provides an overall scope and sequence for the program and scope and sequence charts for: agribusiness, busiand office operations, construction, creative arts, natural resources, personal and public services, tourism and hospitality, and transportation educa-tion programs. Identifiers-*Alberta

This resource manual is designed to assist vocational education teachers in Alberta in implementing each of the 20 courses that comprise the 16-level occupational component of the integrated occupa-tional program. The manual contains specific infor-mation regarding the goals of the integrated occupational program, course organization, cooperative planning, required/elective components, com-munity partnerships, instructional strategies, and teacher support material. The guide first focuses on 10 concepts, skills and attitudes: introductory skills; organizational skills; communication skills; reading skills; writing skills; mathematical skills; visual skills; entrepreneurship; community partnerships; and work skills. The guide provides the goals to be accomplished in each of these areas and suggests methods of integrating these skills into vocational education courses. Activities are suggested for teaching each of the skills and attitudes. The second part of the guide provides teacher support material, such as lesson plans and learning activities, for courses in 20 areas of vocational education. (KC)

Educational reform efforts have thus far excluded vocational education. Recently, there has been a great deal of interest in reevaluating vocational education's role in facilitating academic excellence and economic competitiveness. Inadequate basic skills remain a significant and growing problem. There is a direct relationship between basic skills and the a direct relationship between basic skills and the economic well-being of individuals, families, and businesses as well as the country. A better understanding of what basic skills employers want appears necessary to identifying which skills students should be learning in school. The following benefits of integration and vocational education. should be learning in school. The following should be learning academic and vocational education have been observed: increased quality of vocational instruction; increased quality of academic instruction; increased quality of academic instructions are all the properties of the prop tion; upgraded curriculum; improved "coherence"

in sequencing of 4-year programs of study; im-proved integration and increased understanding be-tween academic and vocational teachers; decreased segregation of academic and vocational students; and increased enthusiasm of teachers for teaching and students for learning. There is no one model for integrating academic and vocational course work that can or should be considered the best approach for all students or all schools. Care must be taken so that large groups of students, especially those most at risk of academic and economic failure, are not excluded from such efforts. (15 references) (CML)

The principal roles for publicly sponsored retrain-

The principal roles for publicly sponsored retraining programs are twofold: (1) to reduce the private and social costs associated with unnecessary delays and social costs associated with unnecessary delays in the reemployment process; and (2) to assist in the replacement of specific human capital lost when a permanent layoff takes place. Nine different demonstration projects and operating programs were examined through available research reports to determine how well public retraining programs for displaced workers fulfilled these roles. Programs extended to the desired of the program extended the desired of the program extended to the desired of the program extended to the progr amined included federally funded projects and programs, state retraining programs in California and Minnesota, Canadian training programs, and Australian training programs. One unambiguous finding was that job search assistance strongly affected a variety of labor market outcomes, including earn-ings, placement and employment rates, and level of unemployment insurance benefits. Given its cost effectiveness, job search assistance should be the effectiveness, job search assistance should be the core of any adjustment assistance services offered to displaced workers. There was no clear evidence that either classroom or on-the-job training had a significant net impact on employment or earnings. (Contains 51 references, 29 tables, and an index). (CML)

Identifiers—*Job Training Partnership Act 1982
Case studies of a wide variety of state and local job related education and training programs revealed enough about the range of coordination activities nationally to permit generalizations about the current state of coordination. In a 2-year effort to examine the coordination of vocational education and Job Training Partnership Act (JTPA) programs, lit-tle evidence of duplication was found. Some isolated instances of destructive competition, primarily caused by local interest group politics, were found, but evidence of substantial destructive competition in the job training system was not found. Coordination can improve program effectiveness by ensuring that contracts are awarded to the most competent providers; that resources are allocated to the most appropriate education, training, and other job-re-lated services; or by making possible a related set of services that are more effective than their individual components. It was found that collaborative service delivery, rather than collaborative planning, was emphasized, and that collaborative planning does not necessarily lead to the development of more effective programs through the coordination of re-sources. The emerging role of welfare-to-work programs in the education and training system is discussed and alternatives for federal policy and emerging issues in the "system" of work-related education and training are presented. A 29-item reference list is included. (CML)

Tennessee, Washington

This document provides the case studies for an original report on the status of coordination among job related education and training programs. The document contains case studies of state-level coordination in Georgia, Illinois, Massachusetts, Minnesota, Tennessee, and Washington. It also includes a section on coordination in selected California Service Delivery Areas (SDAs). To compile the case studies, interviews were conducted with state offi-cials in the secondary and postsecondary vocational education system, officials involved in Job Training Partnership Act (JTPA) administration, and individuals from the welfare department of each state. Additionally, administrators in vocational educa-tion, JTPA, and welfare-to-work programs were in-terviewed in two to five local areas in each state. Five communities were selected in California where vocational education officials, SDA administrators, and welfare-to-work administrators were inter-viewed. Each of the state-level case studies begins by discussing state-level efforts, and then goes on efforts and activities on the local level. (CML)

This guide is written for college students, faculty,
administrators, and staff who would like to get in-

administrators, and staff who would like to get involved in literacy work. Following an introduction, chapter 2 provides basic information about literacy in the United States. Chapter 3 uses a question and answer format to tell how to start a campus pro-gram. Chapter 4 discusses how to work with learngram. Chapter 4 discusses how to work with learners, community literacy programs, and other community organizations and agencies. Chapter 5 gives program ideas, including: tutoring; testing learners; learner orientation; tutor orientation and training; learning materials production; recruiting volunteers and learners; providing child care, transvolunteers and learners; providing child care, transportation, and other support services; fundraising; public relations; conferences and meetings; and award ceremonies. Chapter 6 suggests integrating college curriculum and the provision of services to literacy programs. Chapter 7 concentrates on recruiting learners and tutors and promoting the program. Chapter 8 gives overall advice about training and supervising literacy work. Developing funds is the subject of chapter 9. Existing programs at 13 colleges are described in chapter 10. Chapter 11 is nitended to give readers a sense of the variety of intended to give readers a sense of the variety of issues that concern people who work with and study iliteracy. Chapter 12 contains information on how to contact 21 organizations that are considered resources for literacy work. The document concludes with a 17-item bibliography and a list of 6 related publications. (CML)

Education, Educational Administration, Educational Trends, Education Work Relationship, Fortional Trends, Education work Relationship, rot-eign Countries, Futures (of Society), Government School Relationship, Intervention, *Labor Force Development, Labor Relations, Lifelong Learn-ing, *On the Job Training, Outcomes of Education, Unions Identifiers—*Sweden

Written mainly for a non-Swedish audience, this document has a twofold purpose: (1) to examine how and to what extent the further education and training of the labor force is both presently and pro-spectively dealt with in collective bargaining agreements and other workplace negotiation processes in the Swedish labor market; and (2) to examine the potential and limits of government intervention in the area of human resource development in working life. Eight of nine substantive chapters deal with the following topics: the development of continuing ed-ucation in Sweden; training policy in the Swedish model; the volume, cost, and benefits of adult education and training; labor relations and collective bargaining: legal arrangements for training policy; negotiated contracts involving training policy; the views of Swedish trade unions on future training policy; and the views of Swedish employers on future training policy. A final chapter presents conclusions of the study with research to training policy in ture training policy. A linal chapter presents consistent is sions of the study with regard to training policy in collection negotiations, the regulation of training policy, the financing of training policy, the properts for training policy during the 1990s, and the need for explanatory research. The appendix consists a 28-mestion interview guide for members of tains a 28-question interview guide for members of the major partners in the Swedish labor market. The document includes a list of 108 references. (CML)

A study investigated the contribution of adult education in complementing and mediating the effects ucation in complementing and mediating in effects of early formal schooling on life chances, job satisfaction, and general well-being. Data collected for the cohort of Swedish men followed up in the Malmo study from 1938 to 1988 were examined. The study used measures of home background, discretions of learn in the absence of the properties of the control of the co position to learn in the classroom, cognitive ability assessed in childhood and early adulthood, youth educational attainment, and indicators of occupaeducational attainment, and indicators of occupa-tional status, earned income, job satisfaction, and well-being measured during the early, middle, and late stages of life career. Measures of participation in adult education were available from 30 to 56 years of age. Path models were investigated using linear structural relations analysis. The findings in-dicate that: (1) youth education influences partici-pation in adult education at all ages; (2) early participation in adult education also influences participation in adult education also influences adult participation during subsequent periods; (3) relative to the diminishing effects of youth education on occupational status after 30 years of age, the effects of adult education on occupational status increase with increasing age; and (4) the direct effects of another direct effects. crease with increasing age; and (4) the direct effects of youth education on earnings increase sharply from 25 to 40 years of age and diminish gradually thereafter. The study concludes that research that has used short-term indicators of the effects of adult education has underestimated the contribution of

adult education because participants have not been followed up for a sufficient length of time. In gen-eral, participants in adult education regard their lives as more worthwhile, full, rich, and interesting than those who do not take part. (Over 270 references, 43 tables, and 23 figures are included.) (Au-

Data from the Malmo (Sweden) longitudinal study were examined for the effects of continuing adult educational attainment and formal schooling aguit educationa attainment and format schooling on subsequent socioeconomic achievement over the life span of the individual worker. The results sugest that acquired level of formal schooling directly influences occupational success and earnings in the early, middle, and late phases of the career cycle investigated. The effect of continuing education attainment on occupational success increases considerably from age 35 to 52. The results do not indicate that continuing education exerts a significant effect on earnings. Continuing education may function as a second road to occupational mobility partially in-dependent of acquired level of formal schooling. The results generated, however, do not lend support The results generated, nowever, do not lend support to the assumption that recurrent adult education may significantly affect the relative earnings differentials between the various status groups in society. (Part 1 of this document establishes the theoretical analysis and conceptual frameworks of continuing analysis and conceptual frameworks of continuing education. Part 2 reviews Swedish developments from 1960-1985. Part 3 describes the aims, methodology, and findings of the 45-year Malmo study. Appendices contain 24 tables, and a list of over 300 references is included. (CML)

This document describes a project intended to: (1) render the description, assessment, and evaluation of adult education more relevant to administrators, politicans, and the general public; (2) quantitative and qualitative indicators of relevance to the evaluation of adult education in Sweden; and (3) make recommendations to the Swedish National Board of Education regarding appropriate procedures and methods for the monitoring of adult education on a regular basis. Part 1 summarizes a review of the literature on the definition of indicators applicable to the operation of a monitoring system for policy implementation processes in adult education, with particular reference to Sweden. Part 2 presents a theoretical framework comprising societal, institu-tional, and individual levels of analysis. Those levels are contrasted with program dimensions of adult education in terms of allocation, processes, and out-comes. Part 3 describes several techniques for measuring disparities in the utilization of adult

education that correspond to the dimensions in the framework described in part 2. Part 4 presents examples of application areas, using statistical infor-mation to study equity relationships in Swedish adult education. The document contains 4 figures, 12 tables, and 151 references, some of which are in Swedish. (CML)

Several of the articles in this document arose out of the International Council for Adult Education's World Assembly held in Bangkok, Thailand, in Jan-uary 1990. The first article is on the 1989 evaluation of the Hilltribe Development Project, a long-term project undertaken in the north of Thailand. The article briefly describes various aspects of the project, their objectives, the level of participation, and outcomes. The next article (by Elizabeth Cox) is on making and using training materials for nutri-tion education in a community development project in Papua New Guinea that has used printed materials, slogans, songs, acting, role playing, and screen-printed T-shirts. The next article (by Marjoscreen-printed T-shirts. The next article (by Marjorice Crombie) describes one visitor's 2-day visit to the Nang Naew cattle raising project in Thailand. Fund raising in China's adult schools, which are no longer funded by the state, is the subject of the next article (by Wang Hong Ye). The article on defining popular education for the next decade in Thailand (by Gotham Arya) offers practical advice and recommends a holistic view. The next article (by Francis Hezel) is on what can be done to prevent suicide cis Hezel) is on what can be done to prevent suicide in Micronesia. The last article (by M. Mahbubur Rahman) is about the Community Information and Planning System, a training and action research ex-perience in the Asia Pacific region. (CML)

An evaluation was conducted to describe Tech

An evaluation was conducted to describe Tech Prep prototypes as they have been implemented in five sites in Indiana and to determine the effectiveness of the programs. Tech Prep is a curriculum initiative that: is performance based, provides students with skills necessary to gain employment or to pursue further education upon high school graduation, relates to a broad scope of occupations, includes academic skills taught through practical application, and allows for credit in high school and college and cooperative arrangements. Information was collected through site visits; document review; review of course materials; interviews with students, teachers, counselors, and administrators; and class-room observation. Results of the survey provided a room observation. Results of the survey provided a description of the Tech Prep program as imple-mented at the five sites. The study concluded that each pilot program is well managed and staffed by enthusiastic teachers. It also found that all sites have done a good job of planning, developing, and implementing the pilot activities. No one curriculum model emerged as best; each had strengths and weaknesses and focused on specific needs of the communities and students in its area. Tech Prep has not been labeled a science, mathematics, or vocational program in any of the sites-this is viewed as a positive result that will facilitate dissemination. Recommendations were made for improving and expanding the Tech Prep program. (Appendix includes questionnaires.) (KC)

A large body of literature was reviewed to examine the concept of community education. The re-view was based on the sociological concept of power as it pertains to education-how power enters into educational institutions through formal decisionmaking procedures, methods of assessment, and views of knowledge. The study began with a sche-matic review of literature on the sociology of education to set the context for a discussion of the notion of community education. The study found that many researchers were concerned with the relationship of schooling to social inequality and suggested, explicitly or implicitly, ways of changing education toward a situation of greater equality. It also found that community education locates domination and power in the decision-making processes that affect curriculum and instruction. Curriculum and instrucclass pupils a sense of failure and incompetence.

Advocates of community education thus view the Advocates of community education trus view the school in ways that promote combining learning with social action. However, there are theoretical objections and practical problems with community education, such as parental attitudes, power, examinations, pupil resistance, and lack of resources. These problems may stem from limitations in the institution of the problems of the prob implicit theory of power used by advocates of community education. (An extensive, 302-item reference list is provided in this paper.) (KC)

A two-part study was conducted to determine the

A two-part study was conducted to determine the impact of adolescent employment on the tasks associated with adolescence: transition to adulthood and the development of social and personal responsibility. The first part of the study examined a body of literature around the question. Some of the studies focused on the intrinsic value of work and examined the school-work connection. Others recommended more work experiences for students to help them become more productive members of the commu-nity. The outcomes associated with working while in high school have been the subject of a plethora of studies. Some found positive outcomes of student employment, such as increased punctuality, dependability, and motivation, whereas others sug-gested that work can have undesirable effects. The problem with adolescent work, these studies suggest, is that it is usually low level and does not use basic academic skills. Few students were found to be involved in cooperative education. The second part of the study was based on work in progress in a national longitudinal study of employed and unem-

oyed high school students in rural and urban sites. ployed high school students in rural and urban sites. Data from this study tended to support a tentative conclusion that work benefits students when it is school related and that there are positive effects from school-based work experience programs. A serious problem in home study in recent years has been that, too often, some schools have been paying little attention to student services. They have

paying little attention to student services. They have concentrated their budgets on advertising to recruit new students, while doing little to encourage pres-ent students or new recruits to stay in the program. Efforts have been made to reduce the level and amount of services and to cut expenses in misguided attempts to ensure institutional survival and profitability. High technology has often eroded rather than enhanced services, as machine-graded, objec-tive tests replaced teacher-made tests and instructor's comments. As a result, course cancellations and dropout rates are climbing, students express dissatisfaction with their experiences, and the method of home study education has thereby been diminished. Correspondence students are mostly mature, self-motivated adults. They are generally paying their own tuition out of their own pockets, and they expect quality and are willing to pay for it. If a school is spending less than one-third of tuition dol-lars received on serving the enrolled students, then it can likely expect less than satisfied students and eventual erosion of its position in the marketplace. Professional service is an important key to financial and educational success in home study today. This booklet includes lists of the goals of student ser-vices, what constitutes excellence in student ser-vices, and a checklist for types of services. (KC)

EDRS Price - MF01/PC01 Plus Posta Descriptors—Developed Nations, Experiential Learning, Foreign Countries, Home Study, Management Development, Open Universities, "Management Development, Open Universities, Outcomes of Education, Postsecondary Education, Professional Continuing Education, "Program Effectiveness, Staff Development, "Student Motivation, Teaching Methods Identifiers—"England Home study is practiced by most managers, who read or write reports, reflect on work projects and

problems, and catch up on professional journals at home. A goal of home study advocates is to make such home study as useful as possible. A manage-ment development process known in England as action learning requires that 60 percent of study be done at home, 20 percent in groups at work, and 20 percent in tutor-led sessions away from work. It achieves completion rates of more than 75 percent (unheard of in most home-study-only programs) and is frequently very effective. By positioning the action learning combination study program in the workplace and requiring the wholehearted support of employers and colleagues, the motivation and commitment of those involved is transformed. Action learning works so well because: (1) the worktion learning works so wen occuse: (1) the work-place offers an excellent laboratory to explore ideas; (2) many workplace colleagues can act as unofficial tutors and mentors; (3) the workplace offers oppor-tunities to take action and thereby reinforce earn-ing; and (4) the at-work context of learning demands wisdom in the use of knowledge-normally a missing ingredient in educational performance. Action learning can produce more effective manage

ers and can be more powerful than stand-alone home study. This report describes briefly seven ac-tion learning projects and lists eight ways action learning programs use home study. (KC)

Education, Program Improvement, Student Motivation, "First Construction, Test Format, "Testing In home study, testing is the primary method of interacting and exchanging information with students. However, both the testing methods and the administration of most home study examinations are disappointing. The preparation of most examinations is often an afterthought, with little if any attention given to how such exercises might contribattention given to how such exercises might contrib ute to a student's educational experience. Feedback is important; it should identify errors, postulate the is important; it should identify errors, postulate the probable cause of the error, and suggest a solution or a way to improve. Personal computers can be used for testing and feedback if their capabilities are exploited to the fullest, rather than just using them to provide number scores. Computers can be used to write good feedback letters that are well worth it in terms of student satisfaction and course completions. Test formats include: essay, true-false, multi-ple choice, and open book. Multiple-choice, ple choice, and open book. Multiple-choice, open-book testing may be most suitable for many home study tests. Better testing leads to better teaching and improves the content and process of home study. (KC)

Survey

The purpose of this study was to describe the re-The purpose of this study was to describe the re-cent extent and distribution of work experience of young people in Scotland, using data from the Scot-tish Young People's Survey (SYPS). SYPS, based on a 10 percent sample of all schools in Scotland, is conducted biennially in spring by mail and achieves a response rate of around 80 percent. In the 1987 survey, 20 percent of the respondents reported that they had had a work experience placement. Analy-sis of earlier surveys indicated that this was the highest percentage over the past decade. The range across local education authorities for work experience was from 12 percent to 32 percent. More girls, ence was from 12 percent to 32 percent. More girls, 22 percent, went on work experience than boys, 18 percent. The 5 Technical and Vocational Education Initiative (TVEI) pilot projects had 70 percent of their students in work experience placement. The extent of part-time work during the school term was 45 percent, compared to the 20 percent of work experience placement. A greater proportion of girls than boys had a part-time job. It is suggested that the use of students' own part-time jobs could help to achieve work experience for all students. Integrating the part-time work of some punils into work ing the part-time work of some pupils into work experience provision would enable schools to con-centrate on finding additional placements for the 44 percent of students who have neither part-time jobs in term-time nor go out on work experience. A study of a random sample of 220 male inmates
at New York State's Sing Sing Correctional Facility
was conducted in the summer of 1989. Questionnaires were distributed directly to the inmates. A
questionnaire in Spanish was administered when appropriate. It was found that 79 percent were high
school dropouts, including 78 percent of the black
respondents, 69 percent white, and 87 percent Hispanic. Dropouts experienced a significantly greater
rate of grade retention, school transfers, misbehavior, poor attendance, and poor academic perforrace or graue retention, senior transiers, imsteriavier, poor attendance, and poor academic performance than did graduates in prison. They also had significantly less extracurricular activity. Major reasons for dropping out were wanting to work and being bored with courses. In their last 2 years of school only half had had contact with a counselor. Adverse socioeconomic conditions and poor role modeling probably contributed to dropping out and criminality. At the time of arrest only 52 percent of the dropouts were employed, compared to 71 per-cent of the graduates. Both graduates and dropouts cent of the graduates. Both graduates and dropouts exhibited prevalent furg use, gang affiliation, and relatively low income. Most dropouts regretted their decision to drop out. Eighty-five percent of the sample had participated in the prison's educational programs. Of the 173 dropouts, 103 had acquired a General Educational Development (GED) diploma, with 89 acquiring the GED in prison. Sixteen previous dropouts and 11 graduates attained college degrees while incarcerated. (English and Spanish questionnaires and a 10-page bibliography are included.) (CML)

Seven middlings for enhancing direct mail marginal programs.

Work Experience Flog.

Identifiers.—Direct Mail
Seven guidelines for enhancing direct mail marketing are as follows: target the most promising audience; frame the right message for the audience; state the benefits of making a positive response; send the message at an appropriate time; tell the reader what response is desired; plan follow-upmailings or other contact; and measure results. Suggestions for designing direct mail pieces include: (1) mailings or other contact; and measure results. Suggestions for designing direct mail pieces include: (1) involving all experts at the earliest planning stages; (2) always including a cover letter; (3) targeting messages to each market segment; (4) keeping materials brief and direct; (5) highlighting the benefits that will be received rather than explaining the features of the program; and (6) evaluating what is working and what is not. A direct mail checklist identifies the objectives of the mailer, the mailing list, the frequency of use of the mailer, the costs, and the format. (CML)

In working with the institutional public relations

staff, the following are important: maintaining easy-to-access files; keeping ready-to-use photographs; providing all of the information that is needed for the story; preparing tip sheets that list several story ideas; and keeping in touch with the public relations staff. With the electronic media, cooperative education programs can prepare public service announcements and participate in public affairs programs. Institutional resources, such as special publications and new technologies, should be used. If the institution has a problem that will attract public attention, get the facts, decide on one spo-kesperson, rehearse an interview with all of the toughest questions, and do not lie. (CML)

The Palm Beach Post newspaper in Florida provides a workplace literacy program with six classes in three programs: adult basic education; English for in three programs: adult basic education; English for speakers of other languages; and high school equivalency in preparation for a General Educational Development diploma. Employees receive work-release time or are paid to attend class. Class size is 10-15 students. There is also a bonus plan for employees whose skills improve to certain levels employees whose skills improve to certain levels, culminating in a \$250 bonus for passing the GED exam. The bonuses are regarded as comparable to tuition aid offered for college classes. The Post's goals as a business in providing literacy programs are: (1) increased productivity; (2) improved safety, communications, and precision; and (3) reduced turnover and continued employment and advance-ment for people whose jobs might otherwise be in jeopardy. Increasing concerns about the skill level of U.S. Increasing concerns about the skill level of U.S. workers are driven by demographics, technological change, and international competition. Greater percentages of the labor force will be comprised of those groups that have traditionally faced the greatest barriers to full participation in the labor force. Rapid technological change is increasing the complexity of the workplace. The United States is part of an increasingly global marketplace. The U.S. Department of Labor launched the Apprenticeship 2000 initiative in December 1987 to determine what role the apprenticeship concept might play in what role the apprenticeship concept might play in raising the skill levels of workers. The initiative inraising the skill levels of workers. The initiative in-cluded public dialogue, a research program, and an analysis of relevant studies. Key findings included the following: (1) work-based learning is the most effective method of skill acquisition; (2) the current apprenticeship program can be strengthened and improved, but the system should be preserved; and (3) new training program models should be devel-oped. Recommendations included the following: credentialing structured work-based training procredentialing structured work-based training programs; strengthening the basic apprenticeship model; and supporting and expanding structured work-based training programs, including apprenticeship. The Job Skills Education Program (JSEP) is a computer-based, functional basic skills curriculum and instructional delivery system originally designed for the U.S. Department of the Army. The U.S. Department of Labor funded an exploration of the Army. The U.S. Department of Labor funded an exploration of the Army. the feasibility of increasing the use of JSEP as a workplace literacy tool for employers. It was found that JSEP can work in civilian environments under pilot or test site conditions; however, there were significant barriers to immediate and widespread application of JSEP in the civilian sector. The barriers included (1) incompatibility of JSEP computer systems with the most commonly used commercially available computer system; (2) high cost of work stations and other special equipment neces-sary to operate JSEP; (3) lack of resources to provide sufficient technical support for both courseware and software; (4) a requirement that the programs be customized to the needs-specific occupations and employers at cost to the user; (5) an unresolved issue of control of the copyright for JSEP courseware; and (6) continued use of many Army-specific examples in the JSEP graphics and exercises that may inhibit civilian use. Further, it was found that JSEP is not a stand alone system but needs to be implemented as part of an overall workplace basic skills training system involving literacy task analysis, onsite customization, and supplemen-tal instruction. (Names and addresses of 15 resources and contacts are included. Appendix includes statements by Florida State University and Ford Aerospace about the use of JSEP.) (CML)

Womens Education Identifiers—Contract Training

Identifiers—Contract Training
Training systems are facing three basic considerations: (1) adjustment to demographic trends such as the population explosion in developing countries, the aging of the work force in developed countries, and the increased participation of women in economic activities; (2) changing patterns of demand, such as lower rates of growth, restructuring of the economies of many countries, and technology; and (3) marching supply with demand. Realistic and ef-(3) matching supply with demand. Realistic and effective planning for training programs can begin only if sound data are available; therefore, the first step in coping with future changes is to obtain the requisite information on economic changes and training requirements. Education and training linkages need to be considered. Enterprise-based training is a highly convenient and efficient way training because the curricular contents can be changed rapidly to meet evolving needs, such as changing technology, and it has a built-in quality control measure. The manner in which training is financed constitutes the strongest tool that can be used to bring supply in line with demand for trained

workers. Training in the nonunionized and informal sectors include small enterprise development and training for self-employment. (This discussion paper includes policy recommendations for the roles of policymakers, employers, workers, training institu-tions, and the International Labor Organization.)

there seems to be no reason why quality circles (QCs) could not be implemented in an educational organization. The most important obstacles are the seeming lack of tangible results in education, the lack of a tradition of group decision making and participative management, and the confusion over formal lines of responsibilities. QCs can be a tool for the whole organization to improve its effectiveness. QCs can improve the effectiveness and efficiency of organizational processes through effects on inter-personal and interdepartmental relationships, such as improved communication, understanding of others, and decreased absenteeism and frustrations. The inherent weakness of QCs is that they need to operate within the social effects they are claimed to produce themselves. More and better research is needed to find the effects QCs can yield under what conditions. Theory-building is needed. Management in training and education should reconsider the QC concept and seriously balance potential ben-efits and caveats. (Includes 8 pages of references and 11 pages of documents reviewed.) ness, Program Implementation, Program Im-

provement, Student Participation Identifiers—*Michigan (Saginaw) Implemented in September 1989, the Parents and Children Together project was intended to engage approximately 30 adult basic education (ABE) students in schooling to improve their skills as learners and, at the same time, involve them in the learning activities of their preschool children. A process and product evaluation was carried out on the project. The process evaluation was an ongoing monitoring activity that took place while the project was being conducted; it attempted to determine if the project was being implemented as planned, whereas the product evaluation attempted to determine if the four project objectives were met. The process evaluation showed that 24 ABE students and their preschool and elementary school children participated; and it uncovered problems in central site location, and it uncovered problems in central site location, development of instruments for measuring project goals, and recordkeeping procedures. The product evaluation showed questionable success. Of the five objectives, one was met (75 percent of the pre-schoolers attained 75 percent of school readiness with the contraction of the pre-schoolers attained 75 percent of school readiness. skills), one was partially met (an incentive program to promote attendance was developed), and three were not met (delivery of reading and mathematics instruction to ABE students, use of tutors to assist ABE students, and development of parenting skills). Recommendations were made to solve the transportation, day care, and other needs that participants in such programs typically have. (KC)

Manufacturing
A computer-integrated manufacturing (CIM)
Physical Modeling Systems Design project was undertaken in a time of rapid change in the industrial, business, technological, training, and educational areas in Australia. A specification of a manufacturing physical modeling system was drawn up. Physical modeling provides a flexibility and configurability that encourages and demands continuous adaptation to change over time and permits demonstration of different manufacturing strategies demonstration of different manufacturing strategies and their appropriateness for different circumstances. Such adaptation required the involvement, cooperation, and participation among peers and staff of all relevant teaching schools, divisions, and the Technical and Further Education (TAFE) head office. The adoption of the philosophies of total quality management and world class manufacturing encourages the adoption of integrated manufacturing. Emphasis is placed on maintenance with prac-tice in diagnosis, anticipation, prevention, and planning as well as the dynamics of human participation and cooperation in technical systems. (A 23-item bibliography is included. Appendices pro-vide CIM techniques for industry and business, artificial intelligence and expert systems, integrated manufacturing of the future, a list of acronyms, an example of a flexible manufacturing system for training, and descriptions of science and technology equipment for schools.) Planning

This report presents a strategic plan for adult edu-cation in California. It represents an ongoing and participatory initiative to define current and future needs and recommend how the adult education sys-tem can meet those needs. The proposals put forth in the plan are intended to ensure that adult education will be a self-renewing institution that continu-ally readjusts to meet the needs of a changing society. The plan proposes that education and train-ing providers work with business, other stakeholders, and each other to make the education of adults a priority. Fourteen proposals are presented that together provide an interlinked system for delivery of education and training to adults. These proposals have been developed with the intent of achieving multiple payoffs concerning the four goals of improving a content to wear accountability. proving access to users, accountability, program quality and responsiveness, and planning and coordination. The report is organized in seven parts that cover the following: (1) planning for the future; (2) long-term needs for adult education; (3) today's programs and their performance; (4) focusing goals for the 21st century; (5) an image of tomorrow's adult education; (6) steps to the future; and (7) looking as and their performance; (4) focusing goals for toward tomorrow. An 86-item bibliography is also provided. (KC)

This document is a policy paper that addresses the recommendations for project and staff development made in California's 1989 Strategic Plan for Adult

Education. Following an executive summary, chapter 1 summarizes the objectives and history of the strategic plan. Chapter 2 describes the relationship between the recommendations and the curriculum, covering: legal requirements, competency-based adult education, current Department of Education guidelines, project curriculum work, contributions guidelines, project curriculum work, contributions of local agencies, future needs assessments, and the development of software appropriate for adults. Educational technology's potential impact on staff development is the subject of chapter 3. Chapter 4 provides information on staff development, including background, descriptions of federal projects in California, and other considerations. Chapter 5 explains proposals on staff development, curriculum, and educational technology and states priorities for a feasibility study. Chapter 6 briefly summarizes the earlier chapters. The appendices discuss exemplary adult education programs and selected grant projects at California community colleges. They also provide a glossary of computer and education technology terms, a software review form, a case technology terms, a software review form, a case study, a self-study guide for adult basic education staff development, and a list of California's federally sponsored adult education projects. Three pages of references are provided. (CML)

Designed to document the funding history of California's adult schools, this document also identifies key issues and presents several funding options. Chapter 1 provides an overview of public school adult education in California and discusses the global objectives of adult school funding. Chapter 2 discusses the legislative basis of funding, an analysis of the current funding system, and developments and considerations important to funding options. Chapter 3 discusses relevant issues (creating new adult schools, reasonable enrollment growth, ade-quate revenue limits, and reliable base-year adjustments) and several policy options for unfunded areas, to raise the enrollment cap, to raise the base revenue limit, and to adjust cap and revenue limits. Chapter 4 briefly summarizes preceding chapters.

Strategic Planning

One recommendation of the 1989 California Strategic Plan for Adult Education is the use of Edu-Card. EduCard, the Adult Education Access Card, is a means of giving learners access to information about educational opportunities and providing ad-ministrators with machine-readable information on

learners' prior education and traing. Three models rearners prior education and training. I mee moders are: (1) magnetic strip cards; (2) integrated circuit chips or "smart cards"; and (3) optical memory cards. An existing example, the Michigan Opportunity Card, is used by participants for skills assessment, job placement assistance, storage and retrieval of resumes, and information on training. and educational services. Use of EduCard could develop into an integrated adult education data system that provides interagency information on demographics and learning outcomes and performance. Issues and recommendations regarding EduCard use are: (1) establishment of EduCard as a multia-gency statewide program; (2) protection of learner privacy; (3) selection of one type of technology (integrated circuit cards are preferred for their low cost and security); (4) voluntary rather than mandatory use by participants; (5) involvement of all stake-holders in determining liability and financial poli-cies and procedures; and (6) adoption of a uniform, comparable career assessment model for evaluating learner data in the system. Strategic Planning
This document addresses issues concerning the development of innovative and performance-based methods to fund adult education, which was a recommendation in the 1989 California Strategic Plan for Adult Education. Specifically, it was recommended that funding policies and mechanisms be adjusted to allow and encourage "any-time, any-place, on-demand" instruction through: (1) the use of instructional technologies such as computer-assisted instruction and televised courses; (2) innovative and nontraditional educational methods such as tutoring and on-the-job training; and (3) collaborative programs. In addition, it was recommended that funding be linked to performance. Chapter 1 offers a history and summary of the recommendation and lists its objectives. Chapter 2 is a review of relevant literature. Chapter 3 covers issues surrounding the recommendation and options for its surrounding the recommendation and options for its implementation. They include obtaining legislative authority to test models, adopting the independent study approach as a basis for nontraditional adult education, developing a cafeteria plan of reimbursement options, developing a statistically reliable model for measuring learner competencies, and using EduCard (the Adult Education Access Card, an educational recordkeeping and information system) to facilitate public-private and cross-agency ven-tures. Recommendations appear in Chapter 4. Chapter 5 summarizes the preceding chapters. (CML)

Strategic Planning
This document addresses the recommendation
contained in the 1989 California Strategic Plan for
Adult Education for an integrated adult education data system. The recommendation proposes collecting and organizing community adult education in-formation into groups of data on: program services, program delivery, learner characteristics, and learning outcomes. Chapter 1 offers a history and summary of the recommendation and lists its objectives. Chapter 2 is a review of relevant literature. Chapter 3 covers issues surrounding the recommendation and options for its implementation. Within a section on pros and cons of alternative approaches the fol-lowing are covered: (1) location of the database; (2) data elements; (3) database hardware; (4) databa data elements; (3) reporting requirements; (6) privacy and security; and (7) EduCard issuance and ownership. (EduCard, the Adult Education Access Card, is an educational recordkeeping and information system.) In chapter 4, five policy proposals are proposed to set the parameters for the management information design. Chapter 5 states that the next steps in the process are steering committee agency review, followed by revision. (CML)

This document addresses the recommendation on

developing teacher certification that is appropriate to adult education that was made in California's 1989 Strategic Plan for Adult Education. Following an executive summary, chapter 1 offers a history and summary of the recommendation and lists its objectives. Chapter 2 is a review of relevant literature. Chapter 3 presents credentialing options, criteria for evaluating the options, and the pros and cons of alternative approaches. The options are maintaining the current credentialing system, revising that system, adopting the community college model, providing professional certification, using alternate credential programs, and standardizing adult school and college noncredit programs. Recommendations appear in chapter 4. Chapter 5 offers conclusions and suggestions for future actions. A 26-item bibliography appears. Appendices contain adult educa-tion credential requirements, eminence credential requirements, and materials from the Association of California School Administrators-designated sub-jects advisory committee. A survey of study behaviors was mailed to 300 adult students enrolled in two distance learning programs of The American College. The sample ingrams of The American College. The sample in-cluded three groups: high passers, low passers, and failers. The survey instrument was a 50-item rating scale measuring study practices in six areas: elabora-tive processing, information processing, attitude management, executive monitoring, effortfulness, and strategic test-taking. The overall return rate for the questionnaire was 66 percent. A discriminant analysis indicated that both high and low passing groups differed from the failing group on all six groups differed from the failing group on all six study dimensions, but that the executive monitoring and strategic test-taking scales were the strongest and strategic test-taking scales were the strongest predictors of group membership. Specific study practices most frequently used by all three groups included using practice tests for review, intensive studying the night before the exam, underlining important material, and relating reading material to one's own experience. Fewer than 20 percent of each group reported using charts or outlines to summarize material, writing out a study schedule prior to beginning a course, and overlearning course material. Specific skills used by only the high-achieving group included skimming the text, reading all of the assigned study material, mental rehearsal, and overassigned study material, mental rehearsal, and over-learning. A study was undertaken to determine whether vocational and special educators differed from em ployers on the entry-level employment skills and pioyers on the entry-level employment skills and characteristics that are needed to be gainfully em-ployed in the competitive labor force in the Lewis-ton-Auburn area in Maine. A questionnaire was mailed to a sample of 110 secondary-level voca-tional and special educators that was drawn from

the five area school systems that participate in the Lewiston Regional Vocational Center. A return rate of 71 percent was achieved. Results indicated that orthiness, ability to follow oral instructions, attendance, punctuality, positive work attitude, in-terest and pride in work, seeking help when having difficulty, ability to understand and follow safety rules, motivation, and persistence were the most valued worker skills. There was a high degree of agreement between the educator and employer populations. Results of the study will be used in developing community-based worksite programming. It will also be used in developing and revising curricu-lum for vocational training and transitional skills for special needs students. (17 references, 8 tables, questionnaire) (CML)

Center ME

A pilot study investigated what long-term signifi-cance programming at the Lewiston (Maine) Alter-native Vocational Center (LAVC) has had on the occupational and employment status of special needs graduates. The sample (n=21) was the 1989 class of graduating seniors, who were interviewed and surveyed with a mail questionnaire. The partici-pation rate was 100 percent. The results suggested that program involvement and transitional out-comes for LAVC graduates, after 1 year, have been comes for LAVC graduates, after 1 year, nave ocea-successful. Thirty-eight percent were involved in postsecondary educational training and 52 percent were currently employed. Fifty-three percent were in educational and/or occupational areas directly related to their secondary vocational programs. Fourteen percent are active job seekers who are using strategies and support networks to assist them in finding employment. (A 20-item bibliography, 24 tables, and a copy of an instrument conclude the document.) (CML)

place Literacy The need for training in basic skills in the workplace in Britain has been produced by demographic changes, new technology, changes introduced in firms, the European Single Market due in 1992, and the required competitive bidding for some con-tracts. Workbase, a nonprofit organization, offers training and support for training organizations, Lo-cal Employer Networks, and Training and Enterprise Councils. It has government and trade union support. Training needs analyses are conducted for employers, and recommendations for training are based on the findings. Staff released time is the greatest problem area. Course outcomes are usually of benefit both to students and to the company as a whole. Line managers and supervisors must be com-pletely aware of the benefits and implications of work-based training for their staff. Workbase Materials Packs can be used as the basis of the courses offered, but courses are custom-designed for each client. (Case studies of programs developed at a heating company, a social services department in an

inner city, and an airport are included.) (CML)

A project was conducted in New York City to train parent educators through a trainer-of-trainers model to respond to the career development needs of inner-city handicapped elementary school children and their families. The project enabled parents to intervene early and effectively in the career development process of their children. During a 3period, the project trained 169 representatives from a cross-section of community elementary schools and organizations to train parents of elementary school children who are in special education pro-grams. The project consisted of field-based training grams. The project consisted of ficin-based training seminars and practice conducted at a centrally located facility in the community. In the practice, parent-trainers conducted a series of parent education workshops for 480 parents. Workshops were conducted in English and Spanish. Implicit in the conducted in Engina and spanish. Implicit in the program design was the attention given to training parent-trainers as role models. The project was well received by parent-trainers and parents and re-ceived wide support of community organizations and schools. It is being disseminated to other loca-tions. (Includes project descriptions, internal evalua-tion, and these resource pertural evaluations.) ation, and three annual external evaluations. Appendices contain lists of community organizations, agendas for seminars and workshops, and in-ternal evaluation instructing in English and

The Criminal Justice Initiative (CJI) was conducted in Washington, D.C. from fiscal year 1984 through fiscal year 1986 to relieve overcrowded prison conditions by reducing the recidivism rate. Ob-jectives of the project included hiring additional prison staff to provide security and increase prisoner prison stati to protee security and increase prisoner processing, expanding the education program, and developing classroom and vocational facilities to provide prisoners with basic life skills and a trade that they could use upon release. The project was evaluated by the General Accounting Office (GAO) through its theory in the project was evaluated by the General Accounting Office (GAO) through interviews with officials involved in the beginning of CJI and examination of files and documents of the program. The study showed that implementation of the CJI program was compli-cated and delayed because Congress appropriated more than \$22 million for the project leaving little time for planning and organizing, whereas the Dis-trict had originally planned for only \$750,000 to develop a basic literacy program for prisoners. The study also found that the CJI spent increasing por-tions of the control of the contr study also found that the CJ spent interesting por-tions of its operating funds on education during the 3 years of the project. However, significant data accuracy problems restricted GAO's ability to ana-lyze and draw conclusions about the impact of CJI, or to determine whether the program was successful in placing program participants in training-related jobs after release. Recommendations were made for developing and implementing a better reporting sys-tem so that program effectiveness could be deter-mined. (KC)

Identifiers—*United Kingdom
A study was undertaken to identify the training needs of full-time officers of trade unions in the United Kingdom. Data were collected through the following methods: individual interviews with senior officers of the Transport and General Workers' Union (TGWL) and other trade unions; a question-naire mailed to every national, regional, and district officer of the TGWL; group interviews with new district officers attending a TGWL national course for officers; interviews with representatives of the TGWL Officers! National Computing all the properties of the TGWU Officers' National Committee; a literature search; and a content analysis of existing training and education provided for trade union officers. Based on the findings, a three-stage model for offi-cer training was proposed. Stage 1 consists of pre-paratory measures, including formal commitment to training for officers, discussions between interview panels and officers, sessions to encourage more women candidates, national and regional prepara-tion, and development of an officers' handbook. Stage 2 includes both regional and national induction. Regional induction consists of briefings on the role of the officer, introduction to district office prorose of the officer, introduction to distinct orince pro-cedures, a program of visits and observation, and introduction to the officer training program. Na-tional induction should be a mandatory I -week resi-dential course that covers the role of the officer, office management, law and tribunals, and communicating. Stage 3 consists of continuing education and updating and includes an assessment of training needs and general progress (after 9 months in post). attendance at national courses, and regional courses, and preretirement education. (Includes 32 references and appendices detailing current officer training and summarizing survey responses.)

Kingdom

A project was designed to identify and define training needs at the operative level in the sport, leisure, and recreation industry in the United King-dom. The industry is attracting increasing attention in further education (FE) as a result of rapid devel-opment. The industry, however, is diverse. Provi-sion of FE must be flexible if it is to meet needs in as broad an area as possible. The major growth area is the provision of leisure centers by local authoriis the provision of ressure centers by local authorities, but there is also rapid growth in private provision of leisure facilities, including both major centers such as theme parks and general development as in the diversification of use of farmland. The recommendations for FE arising from the project place emphasis on transferability, flexibility, and relevance, summed up in the notion of openness and responsiveness, which provides a useful general model for adult training and staff development strategies. Suitable assessment techniques are also explored. Recommendations concerning a suitable ethos for course delivery and the importance of skill training are made. (CML)

In response to legislative mandate, this document contains a plan to reform vocational education and career education in Ohio to provide the state's workers with the skills they need for the future. The workers with the skills they beed tof the future. The plan description is organized in eight sections. The first two sections report on the legislation mandat-ing the reform and the response to the challenge. The third section describes the environmental forces and trends influencing vocational education (economic and employment forces, demographic forces, educational trends, and implications for Ohio). The following three short sections list imperatives for the future, describe vocational and career education's mission, and review the process of evolving the vision for the future. These sections are evolving the vision for the future. These sections are followed by a longer section describing the 11 imperatives, goals, and objectives of the action plan: broadening the scope of vocational education; improving access; emphasizing rigorous outcomes; focusing on lifelong individual needs; providing on lifelong individual needs; providing the second education for all students, steamline. career-focused education for all students; streamlin-ing vocational education standards, guidelines, and policies; ensuring adequate resources; accelerating professional development of vocational educators; extending vocational education's strategic alliances; enhancing the public's understanding of and support for vocational education; and constantly emphasiz-ing improvement of the vocational education system. The final section is a short look at the next step. Appendixes review the development of the plan, list contributors, and provide a glossary. (KC)

A project was conducted in Texas using an intergenerational approach to literacy instruction. Par-ents received individualized literacy instruction using the Language Experience Approach, as well as instruction designed to help them encourage liter-acy skill development in their children. Children and parents also worked together on literacy activi-ties with parents as teachers. This handbook describes steps taken to develop, implement, and

evaluate this project, along with anecdotal com-ments about the project in action. Topics covered include literacy education action, intergenerational literacy model project design, student recruitment, project implementation, limited English proficiency speakers, and results. Extensive appendixes contain the project documents, including reviews of litera-ture; core curriculum for preschoolers, toddlers, and infants; evaluation narrative; case study summary sample; sample graphic information of evaluation observations; sample evaluation forms; teaching tips; news for parents; books organized according to themes; resources for teachers of young children;

Identifiers-*Pennsylvania A study sought to analyze the capability of the system existing in Pennsylvania to deliver a com prehensive articulated vocational education program to all, identify problems, and make recommendations to improve the delivery system.

Prior studies were reviewed, the current system was described, problems were identified, promising elements were identified, the Delphi technique was used to identify and prioritize alternative strategies, findings were analyzed, and recommendations were developed. The recommendations dealt with issues of governance, administration, leadership, research, planning, evaluation, professional development, program development, and curriculum. Among the recommendations were the following: (1) Pennsylvania's vocational education should have a regional vanus s vocational education should nave a regional governance, administrative, and taxing structure; (2) the State Department of Education should develop a statewide public information campaign to point out the relationship between effective vocational education and the state's economic develop-ment; (3) the State Department of Education should establish a research center on vocational education and employment and three new high technology centers; and (4) an interdisciplinary curriculum centers; and (4) an interoasciplinary curriculum should be implemented that encourages the integra-tion of academic and vocational education. (In-cludes 33 references. Appendices compare Pennsylvania's economic and demographic charac-teristics to five other states, present Delphi instru-ments and responses, and summarize telephone interviews.) (CML)

In this discussion of managing continuing education credit programming units, three themes emerge. The first theme is that unit administrators must rely upon leverage, or influence, to coordinate

programs effectively and to gain the institution's acceptance of policies and procedures that support the credit programming unit and the adult learners it serves. The second theme is the comprehensive nature of organizing and administering credit courses and programs. Administrators must simultaneously juggle needs assessment, budgeting, mar-keting, student recruitment and retention, program keting, student recruitment and retention, program development, program coordination, faculty participation and development, budgeting and financing, various modes of course and program delivery, student support services, and course and program evaluation, while also attending to the demands and constraints imposed by external agencies and by the parent institution. The third theme is opportunity. parent institution. The turra tneme is upparaturely. Continuing education credit programming has reached a stage of maturity during the past decade. The potential for stimulation and personal and professional growth through such opportunities is boundless. Unit administrators must be willing to participate fully and proficiently in leading higher education into a new era of educational service to adults. (34 references) (CML)

dentifiers—"Job Training Partnership Act 1982.

Identifiers-*Job Training Partnership Act 1982,

A study of the terminees from Job Training Partnership Act (JTPA) programs in Tennessee was conducted. Terminees were JTPA participants who either completed a program or left the program for some other reason. First-class mail survey forms were sent to 2,462 persons. Two follow-up mailings were sent to 2,402 persons. Two follow-up mainings were sent. A return rate of 29.4 percent was obtained. Among the findings were the following: (1) 58.1 percent of the respondents completed their Training in an area vocational technical school, 21.6 percent in an area vocational technical school, 21.6 percent in a state community college, and 11.4 percent in a state technical institute; (3) 71.1 percent of the respondents were working when they filled out the questionnaire; (4) of those working, 81.5 percent stated that they earned more after training than before they entered JTPA; (5) 68.8 percent of the respondents were women; (6) 71 percent of the respondents were white; (7) the mean age of respondents were white; (7) the mean age of respondents was 28.7, with a range from 17-60 years; and (8) 58.7 percent were from rural Tennessee. Program completers were more likely than noncomparam completers were more likely than noncomp gram completers were more likely than noncompleters to attend an area vocational technical school, to be working when the survey was made, to have spent more time on the job, to work more hours per week, to take less time to find a job after JTPA training, to have a higher income per week after finishing training, to earn more when completing mining training, to earn more when completing the survey, and to use skills learned in JTPA on the job. Gender, race, location, handicapped status, veteran status, employment before JTPA, and educational level did not influence whether or not the trainee completed the training program. The text contains 7 tables, and the appendixes provide detailed results in four extensive tables. (CML)

Jerceptions of supervisor bias can profoundly af-

Perceptions of supervisor bias can profoundly af-fect employee morale, yet the perceiver usually in-fers bias from limited information. In this study, 95 fers bias from limited information. In this study, 95 male and female undergraduate students participated in groups of 2 to 5 for course credit, playing the role of middle-level managers working in the personnel department of a fictitious company composed of 700 employees. Participants were asked to evaluate the files of four female employees, and to rate the supervisor's categorical and personal bias. Two dimensions for the classification of bias were proposed: facilitation (e.g. nepotism. "old boys Two dimensions for the classification of bias were proposed: facilitation (e.g. nepotism, "old boys club") versus hindrance (e.g. personal dislike, sexism); and personal (e.g. personal dislike, nepotism) versus categorical (e.g. sexism, "old boys club"). Based on attribution theory, it was anticipated that an unfavorable promotion recommendation, evidence of high employee ability, male supervisor gender, and consensus about the similarity of co-workers experiences would predict attributions of hindrance bias to the employee's supervisor. It was also predicted that judgments of categorical bias would be more strongly influenced by consensus information than would judgments of personal bias. All predictions, except those relating evidence of high ability to perception of bias, were confirmed. Results demonstrate the utility of attribution theory for the study of perceived bias. *Older Adults, *Parent Child Relationship, rar-ent Influence, Sex Stereotypes
This paper addresses the mother-daughter rela-tionship from the perspective of adult daughters.
The first section focuses on information and myths about adult daughter-older mother relationships, inabout adult dagater-older mother relationships, in-cluding popular images and assumptions, misunder-standings, taboos, and mother-bashing. The second section describes initial research into the nature of the adult daughter-older mother relationship and its effects on the daughters' psychological health. It is based on extensive interviews with roughly 70 women that consisted of open-ended questions about the rewarding and problematic aspects of each of the women's major social roles, and specifieach of the women's major social roles, and specifically their role as daughters. The third section describes more recent research based on early findings, which studied daughters' relationships with both their mothers and fathers as part of a larger study of 400 women, 25 to 55, who were employed as social workers and licensed practical nurses, and who varied in family pattern, as well as in race and social class. Based on findings from this research, both rewarding aspects and problematic concerns in the adult daughter-older mother rela-tionship are identified and discussed. (TE)

This paper briefly summarizes differences re-ported in the service delivery provided by the State-Federal Vocational Rehabilitation (VR) service to minorities including Asian Americans, African Americans, Hispanics, and Native Americans. Unresolved issues which appear to influence the development and provision of culturally sensitive services are identified. These include issues of service delivery, policy making, training, and professional standards. Examples of culturally sensitive pro-grams which may serve as models when developing culturally sensitive rehabilitation service are then provided. Rehabilitation counselor training, de-signed to produce culturally competent rehabilitation counselors who are needed to provide culturally sensitive services, are briefly discussed. References are included. (Author/TE)

For decades, educators have been concerned with the problem of truancy. Accordingly, this report focuses on an absentee improvement program at a rural, lower-middle class, predominantly white ele-mentary school with 722 students that had a history of high truancy, as verified by teachers, the adminis-tration, the school counselor, staff, and parents. A program was developed which relied on positive re inforcement as well as counseling over a 10-week period to improve the school attendance rate of a select group of 14 students identified as chronic absentees. These students were informed that they were expected to attend school each day, and in return they would be rewarded and reinforced for consistent attendance by a "special time awards consistent attendance by a special inter awards day" every Friday, consisting of special activities such as ice cream parties after lunch, pizza, a lakefront picnic, a swim party, etc. Results of the implementation, reported in detail, indicate that the program was effective in decreasing the number of absences for the target group, that all of the subjects demonstrated a more restribute attitude toward these. demonstrated a more positive attitude toward them-selves and school, and that grades improved as well as attendance. A bibliography is included. (TE)

Traditionally, counselor educators have employed didactic methods and a Western European world view to train students who will serve minorities. This article proposes a curriculum approach which specifies the desired competencies expected of culturally sensitive, competent, multicultural counselors through experiential methods during training. To provide an example of a balance multicultural counselor training effort, the following components are specified: (1) 20 multicultural counseling competencies for use in multicultural counselor training; (2) 26 curriculum objectives instrumental in developing desired multicultural counseling competencies; and (3) a variety of experiential training This article proposes a curriculum approach which

methods valued in increasing multicultural awareness and sensitivity. (Author/TE)

Descriptors—*Adolescents, *Cross Cultural Studies, *Early Parenthood, Foreign Countries, *Global Approach, Population Trends, *Pregnancy, Pregnant Students, Secondary Education, *Unwed Mothers, World Problems
This instructional packet consists of an essay, a wall noster, and a teacher's guide that provide infor-

wall poster, and a teacher's guide that provide info wan poster, and a teacher's guide that provide intor-mation and statistics about teenage parents through-out the world. The purpose of these materials is tog-give junior high and high school students an over-view of the health, social, psychological, economic, and demographic effects of teenage childbearing and subsequent parenting from a global perspective. and subsequent parenting from a global perspective. The essay contains pre-reading questions, a discussion of major global trends and social issues affecting teenage mothers, illustrative case studies, a glossary, three worksheets with perforated edges for easy removal, and a list of books and other publications for additional research and reference. The wall poster, "Teen Mothers: Global Patterns" contains five comparative data charts showing: (1) increases: five comparative data charts showing: (1) increases in the number of females aged 15-19 in the world, less developed countries, and more developed countries, (2) marriage and childbearing statistics for women ages 16 and 20 in Africa, Latin America, and South Asia; (3) low birth weight babies in the United States; (4) percentage of teenage mothers returning to school after giving birth in Jamaica; and (5) percent of all births to women under age 20 in selected countries. It also provides a demographic table showing the population of females, teenagers, and young mothers in every nation in the world for which these figures are available. (TE)

Durine fall term 1988, an experimental course

During fall term 1988, an experimental course called HIED 202x was developed to help newly enrolled transfer students with their academic and social adjustment to Oregon State University. Analyses were conducted to determine the effects of the course upon student reaction to college, study habcourse upon student reaction to college, study hab-its and attitudes, and academic performance as mea-sured by grade point average (GPA) and retention. Findings indicated that HIED 202x participants had significantly more favorable views of the uni-versity than did a matched-pair control group of transfer students. In general, the participants in the HIED 202x course were significantly more likely to interact with faculty, to get help with their studies, to feel that information about the college was easy to get, and comfortable place. The HIED 202x students also viewed their courses more favorably and were far more aca-demically integrated than nonparticipants-less likely to get behind in their work or get bored in tikely to get behind in their work or get bored in class, more likely to know how well they were do-ing, and more likely to have received help from faculty or staff. Participants also had significant gains in all seven scales of the Survey of Study Hab-its and Attitudes. No significant differences in acaits and Attitudes. No significant differences in academic performance were found in the first three terms on campus, but HIED 202x participants were less likely to experience a significant decline in GPA between fall and spring terms. (References are included and statistical data from the study are appended. (Author/TE)

Countries, "Knowledge Level, "Public Opinion, Public Policy Identifiers—"Canada A questionnaire dealing with knowledge about Acquired Immune Deficiency Syndrome (AIDS) and how it is communicated, with behavior involving risk of human immunodeficiency virus (HIV). infection, and with public policy for dealing with AIDS was completed by 1,259 Canadian adults. Canadians had a generally high level of knowledge about the transmission of HIV infection, about the distinction between HIV infection and AIDS, and about the efficacy of different methods to prevent the transmission of HIV. Most information about HIV infection and AIDS came through the mass media. Canadians were strongly accepting of the wide involvement of a broad range of health, governmental, and voluntary organizations in promoting AIDS education. Concern about AIDS had led to significant changes in the sexual practices of respondents which in turn have reduced the likelihood of HIV transmission. Respondents were strongly supportive of the rights of HIV-infected persons to freedom from discrimination, and be-lieved these rights should be protected by law. Only a small minority expressed opinions suggesting they fear that casual contact would lead to HIV infection. (Results are reported in chapters 2 through 5 of this report; the first chapter describes study objectives and survey procedures and the sixth and last chapter provides conclusions and recommendations; data tables are included.) Interviews were conducted with 712 Canadian street youth (ages 15-20 years) to assess their knowledge, attitudes, and behaviors with regard to knowledge, attitudes, and oenaviors with regard to Acquired Immune Deficiency Syndrome (AIDS) and other sexually transmitted diseases (STDs). Youth were interviewed in 10 cities across Canada on the basis of 5 street culture lifestyles: prostitu-tion, drug abuse, homelessness, criminal behavior, and preparation for employment. The study results confirmed that street youth were a vulnerable group of young people whose lifestyles placed them at high risk for the contraction and transmission of the human immunodeficiency virus (HIV) and other STDs. Respondents reported heavy drug use which may increase their vulnerability to HIV infection. Most respondents reported being sexually active and the majority reported having multiple sexual partners and engaging in sexual experimentation. The first chapter of this report provides an introduction to the study. Chapter II examines family back-ground, school experience, relationships with parents, self-esteem, and mental health of the street

youth. Chapter III illustrates the vulnerable lifes-tyles of the youth, chapter IV looks at their knowledge and sources of information about AIDS and other STDs, and chapter V considers the attitudes ese street youth toward AIDS and STDs. Chapter VI reports on the risk-taking behaviors of street youth related to HIV and other STDs, and the seventh and final chapter reviews key findings and makes recommendations to meet the needs of street youth and to prevent the spread of HIV. Numerous tables and figures are included, and the text is illustrated with black and white photographs. (NB)

This report contains the findings from a survey of over 38,000 youth in grades 7, 9, 11, and the first year of college or university, designed to obtain a cross-sectional perspective of the development of knowledge, attitudes, and behaviors related to Acquired Immune Deficiency Syndrome and other sexually transmitted diseases (STDs). Also included in the sample were youth who had recently dropped out of full-time attendance at school and those who out of ruil-time attendance at school and those who spent most of their time on the streets of large cities. The first of this report's eight chapters provides an introduction to the study. Chapter III describes the young people's characteristics. Chapter III focuses on what respondents know about AIDS and other STDs and the accuracy of their knowledge. Chapter IV reviews from whom and where young people have learned about sex, birth control, STDs, and AIDS. Chapter V examines young people's attitudes toward people with AIDS or human immunodeficiency virus (HIV) infection and homosexuals and homosexuality, and the influence of self-esteem, mental health, and relationships with friends and parents on their attitudes. Chapter VI documents the sexual behaviors of young people and considers factors that influence these behaviors. A description of what was learned through face-to-face interviews with street youth across Canada is included in chapter VII. The final chapter identifies the young people at greatest risk and explores the implications of the main findings. Educational initiatives and social interventions are suggested. Numerous statistical figures supplement the text. (NB)

Descriptors—"Adolescents, "Early Parenthood, "Pregnancy, "Prevention, "State Legislation Identifiers—"Wisconsin

This staff brief was prepared for the Wisconsin Legislative Council's Special Committee on Teen-age Pregnancy Prevention and Related Issues. It information on teenage pregnancy, propresents information on teenage pregnancy, programs to deal with teenage pregnancy, and proposed legislation from the 1989-1990 Wisconsin Legislative Session. Part I of the brief provides pregnancy data for the United States and for Wisconsin. Part Il looks at state teenage pregnancy prevention programs, including services by the Wisconsin Department of Health and Social Services, the Adolescent Pregnancy Prevention and Pregnancy Services

Board, and the Department of Public Instruction. The section on Department of Health and Social Services programs includes discussions of adolescent pregnancy prevention services, adolescent self-sufficiency grants, adolescent services, adolescent choices project grants, pregnancy counseling services grants, family planning grants, block grant funds for adolescent pregnancy prevention and relunds for adolescent pregnancy prevention and re-lated services, medical assistance for family plan-ning, and grandparent liability. Part III describes four legislative proposals related to teenage preg-nancy prevention which were introduced, but failed to be enacted into law, in the 1989-1990 Wisconsin Legislative Session Brocomb diversed before Legislative Session. Proposals discussed relate to adolescent health services and child abuse report-ing; sex education in public high schools; establishing a program of grants for clinics to provide school-based health services for adolescents, and creating an adolescent board. Section HSS 107.21 of the Wisconsin Administrative Code and a list of the Adolescent Pregnancy Prevention and Pregnancy Services Board staff and members are appended.

College Students vs. RAs: A Programmatic oparison of Ideas about Alcohol and Drugs.

Pub Date—89

Pub Date—89
Note—14p.
Pub Type— Reports - Research (143)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—4Alcohol Education, College Students, Dormitories, Drinking, *Drug Education, Drug Use, Higher Education, Knowledge Level, *On Campus Students, *Resident Assistants, *Student Attitudes, *Student Behavior
This study compared differences between resident assistants (RAs) and conduct code violators in alcohol and drug knowledge, reported use, and percept

hol and drug knowledge, reported use, and perceptions of reasons for abuse and role of the institution. Twenty conduct code violators participated in an alcohol and drug education program and 35 RAs participated in an abbreviated program as part of their job training. The setting for this program was a state college in Oregon with an enrollment of about 4,000 students of whom 800 lived on campus. All subjects completed the Alcohol: Facts vs. Myths test and the Drug and Alcohol Usage/Awareness Assessment. The results showed that RAs were generally more knowledgeable about alcohol facts than were conduct code violators. Respondents showed some knowledge of alcohol, especially in the areas of its classification as a depressant, behaviors of in-toxication, and overdose dangers. Both groups seemed less aware of alcohol's impact upon society and appeared misinformed about alcohol's effects on the body. RAs appeared effective in identifying students who abused alcohol or drugs. RAs differed strongly from violators when describing reasons for abuse of alcohol or drugs, and suggestions for the role of the institution and its representatives. These findings suggest that RAs may not have a clear understanding of the conduct code violators. Evalua tions from the program suggest that college alcohol and drug programs should include appropriate com-ponents on effects and dangers of drugs, and on family influence, and should be conducted in a non-judgmental atmosphere. This study investigated the applicability of Beck's cognitive theory of depression to non-clinical adolescents. Specifically, adolescents' personal and future information processes (i.e., two content areas of the cognitive triad) were examined as a function of the cognitive triad) were examined as a function of their self-reported levels of depression and cognitive vulnerability to depression. Ninth-through 12th-graders (N=84) completed several instru-ments, including the Beck Depression Inventory, the Dysfunctional Attitude Scale, the Hopelessness

Scale, and measures of student's recall of both posi-tive and negative self-referent adjectives. The re-sults of a canonical correlational analysis revealed that students' levels of depression (and to a lesser extent, levels of cognitive vulnerability to depression) were significantly related to their negative exsion) were significantly related to their negative ex-pectancies towards the future, as predicted. However, support was not found for the relation-ships between levels of depression, cognitive vulner-ability to depression, and students' personal information processes. The findings suggest that Beck's cognitive theory of depression may have lim-ited applicability for understanding and explaining depression in a non-clinical adolescent subject population. The Early Intervention for School Success (EISS) program was designed to provide developmentally appropriate instruction in kindergarten and first grade classrooms, by providing the knowledge and skills that teachers and parents need to insure that children in California schools remain happy about learning. This goal is achieved by helping teachers to identify children's learning styles and strengths, focusing a small portion of each day on individual focusing a small portion of each day on individual learning needs, and encouraging a diagnostic teaching style. The program rests on the successful implementation of six key program components: team screening, team conferencing, educational planning, developmental instruction, parent involvement, and evaluation. During the 1988-89 year, 56 new schools implemented the program, serving 6,991 students in 243 classrooms. Child study teams composed of classroom teachers and support staff were posed of classroom teachers and support staff were trained in each school, and schools were monitored through written reports and visits to each site. Re-search and evaluation efforts were continued in three broad areas: (1) reliability and validity studies of program-developed screening instruments; (2) longitudinal studies of program effect; and (3) evaluation of progress toward project goals. Results of the most recent evaluation are reported in detail, including student achievement goals, cost benefits, and teacher response. (TE)

*Social Attitudes

This study sought to describe public awareness, perceptions, concern and response to the phenome-non of mistreatment of older adults. The setting for non or mastreatment of older adults. The setting for the study was the classic community context of Middletown, U.S.A., Muncie/Delaware County, Indiana. Adults (N=400), selected by random digit dialing, were interviewed in November 1989. Sub-jects were asked about respect for older adults, mistreatment of the elderly, comparison of drug abuse and elderly mistreatment, the experience of elderly mistreatment and its reporting, and types of mis-treatment. The results indicated that most of those surveyed felt that older adults did not get enough respect. Almost one-half felt that elder mistreat-ment was a serious problem in their area. Almost all felt that drugs were a more important problem in comparison to mistreatment. Those who had en-countered or suspected a case of elderly mistreatment tended to feel that mistreatment was a serious social problem. Less than one-half of those who indicated awareness or suspicion of mistreatment reported to some authority. Lack of awareness of the state's Adult Protective Services Agency was apparent. (ABL)

gram Effectiveness

Dramatic increases in the dropout rate, particu-larly among classified behavior disordered children, coupled with a decline in an Occupational Education enrollment project led to the creation of a "fail-ure identity" for individuals and a loss of human resources to the national work force. The need to address this problem was the stimulus for creating the Technical Alternative High School. It was designed to treat an aspect of the dropout problem by offering students a realistic opportunity to experience competence through occupational training integrated with academics and supported by
structured counseling activities. The goal of the program was to address the attitudes and behaviors that contribute to the dropout problem by developing a student's sense of competence and worth through meaningful vocational and academic experiences, integrated with social skills training and counseling support. Post-test results thus far have been encor aging and have helped to achieve the award of a competitive grant for dropout prevention. Students demonstrated improvements in the levels of on-task behavior achieved in problems with learning, un-happiness/depression, and physical symptoms/ fears. The Special Education staff came to be looked upon as a resource to the larger community for assistance and advice with other problematic students on campus who were neither classified nor enrolled in the Technical Alternative High School. A quasi-experimental design using four matched

A quasi-experimental design using four matched groups of 88 students each of entering college freshmen investigated the question of whether increasing exposure to different types of orientation program-ming would have any effect upon freshman aca-demic performance and reaction to college. The types of orientation included: (1) traditional orientation with fall term pre-registration orientation program; (2) fall and summer orientation program; (3) fall and summer orientation and first term of an extended course taught by underclassmen; and (4) fall and summer orientation, first term of the extended course and a one-credit hour university seminar course. Results indicated that freshmen who participated in each of the four types of orientation programming did not differ significantly on the 19 subcategories of the Student Reaction to College Survey. However, individual analysis of the items showed that students who participated in all four orientation programs were significantly more involved with faculty, were more informed about their progress in courses, reacted more favorably to registration, and were less likely to drop classes than were students in other orientation groups. However, students with full exposure to orientation programming expressed greater dissatisfaction with the quality of student/faculty interaction and were significantly more critical of the supportive aspects of the college and faculty. *Incest, *Incidence, *Research Problems, *Sexual

This study reviews research examining the inci-dence of incest and child sexual abuse, focusing on the apparent discrepancy between incidence rates based on child service agency incident reports and the surveys of victims reports. Research is reviewed from the 1950s, 1970s, and 1980s. Research problems and limitations are described. The problem with varying definitions of incest and sexual abuse is discussed. Age-related reasons for underreporting of abuse are discussed, noting that younger children do not understand the notion of aberrant sexuality or its consequences. Positive and negative consequences of child sexual abuse reported in the literaure are reviewed. Recent literature focusing on the initial or proximate effects of incest and sexual child abuse is described. The literature review presents these conclusions: (1) the seriousness of the prob-lem of incest and sexual abuse is difficult to determine because of the discrepancy between official reports or incidence versus what has been found in recent victimization survey studies; (2) much of the discrepancy is due to lack of a standardized definition of sexual abuse; (3) there is an unknown degree of underreporting of sexual abuse made to child service agencies. For generations Pacific Islanders have used kava root and betel nut for a variety of cultural, medicinal, and ceremonial purposes: to overcome social barriers and lubricate social interactions; to cure bodily afflictions; and to accompany traditional and religious rituals. Kava, also known as ava, sakau, and yaqona has a long tradition as a healing agent and ceremonial drug. Much contemporary kava drinking is done for the purpose of its pleasant physical effects. Kava has a very strong narcotic action, with the kava drinker experiencing an euphoric state for a short duration. Long-term physical symptoms of chronic drinkers include low body weight, liver and kidney problems, blood abnormalities, body rash, laziness, etc. Kava has been reputed to cure gonorrhea and to be helpful in curing other diseases. Tolerance of the effects of betel nut chew-ing is similar to nicotine. The most serious long term hazard associated with betel nut chewing is oral cancer. The chewing of the tough fibrous nut helps keep the teeth and mouth clean. The psychological effects of betel nut have been thought to be largely personal and/or social. The rising practice of using cigarettes with betel nuts is a major health concern

Concept, Self Esteem

The effects of a peer counseling program on the elementary school level were studied to determine if positive relationships would promote personal and academic growth thereby increasing self-esteem and self-concept. The project was implemented in three phases: selection and training of 15 fourth and fifth grade students; implementation of special projects (counseling, tutoring, meeters and greeters, big brother/big sister); and evaluation. The 15 students brother/big sistery; and evaluation. The 15 students were trained in the areas of facilitative responding, effective listening skills, helping characteristics, problem solving techniques, maintaining positive relationships, awareness of feelings, scheduling, and maintenance of logs. Evaluation included pre- and post-attitude surveys of students in grades one through five, a pre- and post- attitude towards other survey of the trainees, a skills and concept test to determine competency of facilitator skills, and in-formal observations and interviews with the helpers, formal observations and interviews with the helpers, helpees, and teachers. The results indicated increased self-esteem and self-concept of students in grades one, three, four, and five. The students trained to be peer counselors demonstrated significant increases in positive attitudes towards others. It was concluded that a peer counseling program on the elementary school level does promote personal and academic growth. (Appendices include pre- and post-attitude surveys, skills test, training materials and worksheets, and survey analyses.) (Author)

Differences, *Delivery Systems, *Hispanic Americans, *Mental Health, Psychologists, Use Studies The high fertility rates among Hispanics and the continuing immigration patterns are making the mental health needs of Hispanics a national concern. The issue of the underutilization of mental mental health needs of rispanics a hautonal concern. The issue of the underutilization of mental
health services by Hispanics must become a prominent concern for all Americans. Three main factors
in the underutilization of mental health services by
Hispanics include: (1) psychotherapist bias; (2) cultural variables; and (3) the underrepresentation of
Hispanics in the field of psychology. Evidence has
been found of a social class and linguistic bias
among psychologists, although the evidence finding
ethnic bias against Hispanics has been equivocal. A
number of cultural variables have been found to play
a part in Hispanic underutilization. These include
Hispanic attitudes, levels of acculturation, alternative support networks, and ethnic similarity and
credibility. The lack of research on the topic of Hispanic underutilization of mental health services
points out the relative lack of interest in the topic.
With the growing Hispanic population, a concerted
effort is needed to examine the significant issues
involved in the delivery of effective, culturally seninvolved in the delivery of effective, culturally sitive mental health services to Hispanics. (ABL)

Suicide and deviance are related because loss in social interaction is a consequence of deviance and an antecedent to suicide. This study examined the cognitive and affective experiences of suicidal individuals for evidence of neurosis. Sixty young at-tempted suicides with a history of a serious suicidal attempts attending the suicide prevention clinic at the Government Rajaji Hospital in India and 60 matched normal and neurotic controls were subjects in a study of their neurotic reaction patterns and aspiration levels. The results indicated the attemptaspiration levels. The results mucated the attempters shared with their non-suicidal neurotics features like tension, feelings of insecurity, and a high sickness frequency rate, but clearly differed in their conviction that they fail at everything they do and their goals are unattainable. The normals exhibited goals are unattainable. The normals exhibited greater strivings for success and made adequate adjustments both to success and failure, while the neurotics were more rigid and continued to keep the high goal level regardless of success or failure, acting on ego frames of reference. The suicide attempters set out with goals that were unattainable. This led to a series of failures followed by a state of homelessness with concomitant feelings of futility. to a series of failures followed by a state of hopelessness with concomitant feelings of futility, impossibility, depetir and a total lack of aspirational meaning in life, a condition which Frankl termed no ogentic neurosis which accounts for 20 percent of the population today. Low-income, single mothers and their children constitute a rapidly growing population at risk for adverse health outcomes. The mental health of these women is particularly at risk. This study investigated the prevalence of maternal depressive symptoms in low-income, single mothers of 1- to 4-year-old children; identified psychosocial predic-4-year-old children; identified psychosocial predic-tors of depressive symptoms among the women; and investigated effects of maternal psychosocial fac-tors, depressive symptoms, and parenting attitudes on children's behavior. The sample consisted of 225

mothers recruited from health department clinics. In-home interviews were conducted to obtain data on the mothers' everyday stressors, coping strategies, social resources, depressive symptoms, and parenting attitudes, as well as the mothers' reports of the index children's behavior. The prevalence of high depressive symptoms among the women was 59.6 percent. Higher depressive symptoms were as-59.6 percent. ruper depressive symptoms were as-sociated with greater everyday stressors, fewer so-cial resources, and greater use of avoidance coping. Neither social resources nor coping strategies buff-ered the relationship between everyday stressors and depressive symptoms. Maternal depressive symptoms predicted parenting attitudes. Parenting attitudes, in turn, predicted child behavior. The results suggest that depressive symptoms are indi-rectly associated with mothers' reports of child behavior through their influence on parenting attitudes. (Author/ABL)

This document presents a personal statement concerning the recommendations in "Turning Points,"
a 1889 publication of the Carnegie Corporation's
Task Force on Education of Young Adolescents.
This document suggests how the reformulation of
middle grade schools along the lines recommended. in "Turning Points" can improve the life chances of young people. It begins by briefly reviewing special features of education in early adolescence, then considers the concept of a transformed middle grade school. Seven recommendations from "Turning Points" are examined: (1) dividing large middle roms are examines: (1) othering large mindie schools into smaller communities for learning; (2) providing a core program to all students; (3) maximizing students' opportunities to be successful; (4) giving teachers and principals primary responsibility and authority for middle schools; (5) preparing middle school teachers to teach young adolescents;
(5) forming alliances between families and school staff through mutual respect and trust; and (7) linking schools and communities in educating young adolescents. The health component of early adolescent education is also considered and these issues are discussed: life sciences and education for health, school as a health-promoting environment, and ensuring access to health services. The role of the mid-dle school in promoting social support and life skills training is emphasized. The report concludes by encouraging a serious national effort to reform the neglected phase of middle school education and to ntinue improving it in the future. (NB)

This book of readings consists of 15 chapters grouped into 4 "Parts." The readings provide information and strategies for counselors, teachers, par-

ents, administrators, social workers, and others who work with youth at risk. Sample programs that have been effective are described and data are provided on causal factors for youth problems. The book contains in-depth looks at such topics as teenage suicide, depression, drugs, eating disorders, gangs, dropping out of school, and sexual abuse. Part 1 presents information related to population identifi-cation, the issues and concepts involved, and a framework to aid the reader in better understanding the variables that relate to the at-risk population Parts 2 and 3 present both causal factors and resultant behaviors that are descriptive of the at-risk population. Data are provided on both developmental and environmental factors that place an individual at risk and behaviors that are often the result of the causal factors identified. Part 4 presents information regarding one of the major results of at-risk behaviors - dropping out of the educational system. The final chapter of the book identifies both regional and national programs that have proven to be effective in working with at-risk populations. (NB)

This document consists of Part 1 of a book of readings on at-risk youth designed to provide infor-mation and strategies for counselors, teachers, parents, administrators, social workers, and others who work with youth at risk. The two chapters in Part 1 present information related to population identifica tion, the issues and concepts involved, and a frame-work to aid the reader in better understanding the myriad variables that relate to the at-risk popula-tion. Chapter 1, "Defining Youth At Risk" (Doug-las R. Gross and Dave Capuzzi), introduces the area of at-risk youth; presents information relative to population identification, issues and concerns, and the concept of being at risk from both a developmental and educational perspective; and serves as an overview for the entire text. Chapter 2, "Poor Soil Yields Damaged Fruit: Environmental Influences" (J. Jeffries McWhirter and Ellen Hawley McWhirter), surveys some of the environmental in-fluences that affect the lives of adolescents, stressing associative rather than causative relations. It pres ents a conceptual and organizational framework for viewing the issues related to working with at-risk youth. (NB)

This document consists of Part 2 of a book of readings on at-risk youth designed to provide infor-mation and strategies for counselors, teachers, parents, administrators, social workers, and others who work with youth at risk. Part 2 contains five readings on causal factors related to at-risk behaviors. "The Harmful Effects of Dysfunctional Family Dynamics" (Artis Palmo & Linda Palmo) presents information on the effect of family dynamics on the development of at-risk behaviors in youth, thera-peutic treatment modalities for dysfunctional fami-lies, the use of referral and consultation with lies, the use of referral and consultation with families of at-risk children, and the process of assessment with families of at-risk youth. "Bodily Assault: Physical and Sexual Abuse" (Robert Rencken) presents the incidence and effects of hysical and sexual abuse, the dynamics of the youthful offender, and strategies for intervention.
"Who Cares What I Think?" Problems of Low Self-Esteem" (Sandra Meggert) examines low self-esteem as a primary cause of at-risk behavior and provides a framework and strategies to aid in creating positive levels of self-esteem. "When Life Seems Darkest: Adolescent Depression" (J. Jeffries McWhirter & Benedict McWhirter) addresses the symptoms, causes, and treatment of adolescent depression. "The Society We Live In: Stress and Coping" (Art Terry & Sylvia Milliken) provides information related to the stress response mechanism; explores the daily stressors of youth as these relate to biological, developmental, and individual relationships; and provides application and intervention techniques as well as recommendations and suggestions for program implementation. This document consists of Part 4 of a book of readings on at-risk youth designed to provide infor-mation and strategies for counselors, teachers, par-

ents, administrators, social workers, and others who work with youth at risk. Part 4 deals with the school dropout and school and community programs that have proven to be effective in working with at-risk populations. "Understanding and Preventing School Dropout" (James Kushman & Paula Kinney) discusses the complexity of the dropout problem and presents information that addresses the dropout issue from the perspective of the student, the family, the school, and the community. Intervention strategies are discussed that focus on both the individual and the larger system in which the individual functions. "The Solution Lies in Programs That Work" (Walter Hathaway, Carolyn Sheldon, & Patrick Mc-Namara) contains information related to regional and national programs directed at helping at-risk youth. Programs were selected for inclusion in this chapter based on the positive effects they have demonstrated with the at-risk population. (NB)

This document contains chapter 2 (3 articles) of Association for Counseling and Development (AACD) publications on the most important legal and ethical topics about which all school counselors need to be informed. "Confidentiality: To Tell or Not To Tell" (Joseph C. Zingaro) asserts that a child's right to privacy, regardless of the child's age, should be compromised only in the most extreme circumstances. It offers recommendations for circumstances. It offers recommendators for school counselors who are asked to disclose information told to them by a child in confidence. "Ethics and School Records" (Margaret M. Walker and Marva Larrabee) encourages school counselors to take responsibility for managing students' records in a manner that assures students of their rights. "Privileged Communication in School Counseling: Status Update" (Vernon Lee Sheeley and Barbara Herlihy) reports that 20 states have passed statutes that provide some degree of protection of the privacy involved in student and school counselor relationships. The statutes in existence are summarized and implications for practice are discussed. (NB)

able from EDRS.
Descriptors—Case Studies, *Counseling, *Counselor Training, *Ethics, *Professional Associations, *Standards

This fourth edition of the Ethical Standards Casebook was developed for use in a class in ethics in counseling or in other settings where ethical issues are considered. Section 1 presents the revised American Association for Counseling and Development (AACD) "Ethical Standards" adopted by the Governing Council in March 1988. Section 2 presents each individual ethical standard followed by several incidents intended to illustrate and clarify the meaning of the standard. The incidents vary in their seriousness, ranging from gross unethical con-duct to behavior reflecting poor practice or ques-tionable judgment. Section 3 provides a series of case studies that are more detailed and complex than the incidents in the previous section and are more typical of the situations an AACD member may encounter. The case studies reflect the types of complaints that the Ethics Committee receives as well as the current and emerging concerns of the membership. Section 4 presents a series of essays intended to provide further information and provoke thought about ethical issues of particular con-cern to counselors. The appendices contain information to which the AACD member may need to refer from time to time, including: divisional

codes of ethics: the ethical standards of the National Board for Certified Counselors; the AACD Policies and Procedures for Processing Complaints of Ethi-cal Violations; and a description of the purpose and procedure of the AACD Legal Action Program. (NB)

This book focuses on the interactions between

economic, social, and political environments, indi-vidual behavior, and the form and substance of counseling. The book attempts to synthesize a counseling. In eools attempts to syntesize a wide-ranging, multidisciplinary literature that outlines changes in the larger society, changes that have or are likely to have direct implications for individual behavior and for counseling responses. Chapter I asserts that the content of counseling, with whom the counseling, with whom the counseling. with whom the counselor works, and the degree to which counseling is seen as a vital and important sociopolitical institutions derive from major social, sociopolitical institutions derive from major social, economic, and political themes that affect individual and group psychology. Chapters 2 through 5 examine four major challenges that will influence individual behavior and the perceptions of how counselors should interact with the settings and populations they serve. Chapter 2 addresses the complex issues that relate to the implementation of advanced technology. Chapter 3 treats the dramatic shifts in family structures and the sex revolution. Chapter 4 deals with immigration and the concern for cross-cultural counseling, multicultural sensitiv-ity, and cultural pluralism in the United States. Chapter 5 addresses the concepts embodied in the term "at risk." Chapter 6 focuses on some of the emerging theoretical and other paradigm shifts. Chapters 7 and 8 discuss recurring and emerging challenges that are less pervasive or more vague in their implications for counseling than the four major challenges discussed in chapters 2 through 5. a comprehensive guidance program (planning, designing, implementing, and evaluating) as described by Mitchell and Gysbers (1978) are used as the organizers for this book. Chapter 1 traces the evoludance in the schools from the turn of the century. The changing influences, emphases, and structures from then until now are described and discussed in detail and the recent emergence of developmental comprehensive guidance programs is highlighted. Chapter 2 focuses on the issues and concerns in planning and organizing guidance program improvement. Chapter 3 presents a model guidance program based on the concept of life career development. Chapter 4 discusses in detail the steps involved in finding out how well a current program is working and where improvement is needed. Chapter 5 begins the designing phase of the program improvement process, focusing on design-ing the program of choice. Chapter 6 describes the steps necessary to make the transition to a comprehensive school guidance program. The steps in actually making the transition to a comprehensive school guidance program are described in chapter 7. Chapter 8 focuses on how to ensure that school counselors have the necessary competence to develop and manage a comprehensive school guidance program. Counselor supervision procedures are highlighted. Comprehensive school guidance program evaluation is discussed in chapter 9 which features program evaluation, student outcome evaluation, and professional personnel evaluation. (NB)

This book presents a practical guide on how to improve the communication and cultural awareness among culturally different people. It is organized into three parts which correspond to the three stages of multicultural development: awareness, knowledge, and skills. The first part emphasize the awareness of culturally learned opinions, attitudes, and assumptions. Chapter 1 applies the awareness, knowledge, and skill sequence to assessing needs, developing objectives, designing training, implementing training, and evaluating outcomes. Chapter 2 presents 12 exercises to help trainees identify their own culturally learned assumptions, opinions, and attitudes. Chapter 3 discusses 10 culturally biased assumptions from a white, middle-class, urban, male, dominant culture perspective. Chapter 4 begins the second part of the book by emphasizing knowledge about multicultural counseling. Chapter 5 emphasizes research on multicultural counseli chapter 6 reviews data and information, describing why multicultural awareness is needed in the counseling profession. Chapter 7 begins the third part of the book by discussing skills used in multicultural counseling. Chapter 8 describes the Triad Model as one model for developing multicultural skills in counseling. Chapter 9 describes four dimensions of skill development that apply to developing multicul-tural awareness. The conclusion summarizes basic elements of awareness, knowledge, and skill as they contribute to developing a multicultural awarene

Descriptors—*Academic Advising, *Academic Persistence, College Students, Comparative Analysis, Course Selection (Students), Educational Planning, Grade Point Average, Higher Education, *Student Attrition, *Student College Relationship, Student Needs, *Transfer Students College transfer students have been shown to have a high risk of attrition from their second institution, in part because of errors in judgment during course preregistration. Accordingly, the Admissions Office at the University of Maryland at Col-

lege Park (UMCP) reviewed the proposed course registrations (for fall 1988) of a sample of transfer students who ended their first (spring 1988) semester at UMCP with an academic warning. A treat-ment group of 63 students were sent a letter during the summer of 1988 from a special advisor, listing recommendations for changes in the student's fall registration. For the following four semesters, the rates of academic persistence and grade point averages of this treatment group were compared with those of a comparison group of untreated transfer students. No statistically significant differences between the two groups was found on overall rates of persistence at UMCP, although students in the treatment group initially persisted at UMCP in higher numbers that the comparison group. Nor were there any statistically significant differences in academic standing. These findings suggest that such intervention by advisors in reviewing course preregistration and recommending changes needs to be followed up with other interventions, such as a diagnostic and prescriptive interview, in order to have rates of academic persistence and grade point avernostic and prescriptive interview, in order to have any sustained effect on retention. A careful analysis by Zelnik and Kanter of the Department of Population Dynamics at Johns Hopkins disclosed that abortions, unwed teenage preg-nancies, venereal diseases, and sexual promiscuity have all increased dramatically in spite of a massive public and private program of contraceptive indoc-trination and dissemination. This increase is attribtrination and dissemination. In inference is attrio-uted, in part, to the adoption by schools and planned parenthood clinics of a relativistic "values clarifica-tion" approach to values, which avoids indoctrina-tion or "taking sides." This approach deprives parents, school, and society of the right to provide parents, school, and society of the light to provide standards for sexual behavior, and leaves young people vulnerable to peer pressure alone. Accord-ingly, the concept of mandatory parental notification for abortion and other consequences of teenage sexuality is endorsed, and legal issues surrounding adolescents' right to privacy and parents' right to notification are reviewed and discussed. Contracep-tive counselors seldom make any effort to involve parents, yet parental pressure can be an effective counterpoint to the overwhelming influence of per pressure in reducing adolescent unwed pregnancy. There are no hard data to support the dire predictions of undesirable consequences flowing from mandatory parental notification. Given the present crisis, this approach therefore deserves implementa-tion and evaluation. (TE)

This report is the result of taped interviews with

Identifiers—Alaska
This report is the result of taped interviews with
115 Alaskan teenage women who have dropped out
of "regular" public school. Two results of the study
stand out: first, the majority of the students wanted
a diploma, but nonetheless felt compelled to drop
out: second (the research most side auch for deout; second (the reason most girls gave for dropping out): no one cared. However, most of the young people expressed appreciation and enthusiasm for the education and support they were receiving from the alternative schools to which many of these girls turned after they dropped out. Such schools address four major factors which caused the girls to drop out in the first place: (1) abuse and neglect; (2) stereotyping and discrimination; (3) low self-esteem; and (4) isolation and alienation. As a consequence of this research, the report provides three sets of recommendations, addressed respectively to the state legislature, to the Department of Education and the University of Alaska, and to the school districts of Alaska. In summary, the report emphasizes the importance of having adults act as advocates for a child, keeping track of her academic progress, her social relationships, and her health. It also calls for a more personal, flexible school environment that encourages such attention. Interview questions are appended and references are included. (TE)

Bullying in Scottish Secondary Schools. SCRE
Spotlights 23.

Spons Agency—Scottish Education Dept., Edinburgh.

Pub Date-Mar 90

Note—9p.
Pub Type— Reports - Research (143)
EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Adolescents, *Aggression, *Antisocial Behavior, Behavior Problems, *Delinquency, *Emotional Response, Foreign Countries, *Hos-tility, Incidence, Problem Children, Secondary Education, Student Behavior, *Violence Identifiers—*Bullying, Scotland

Pursuant to a European teachers' seminar on bul-lying in school held in Stavangar, Norway in 1987, a comparative research project in Scotland identi-fied variations in the incidence of bullying in Scottish secondary schools and investigated and described successful coping strategies. Bullying was defined as "long standing violence, mental or physical, conducted by an individual or a group against an individual who is not able to defend himself or herself in that actual situation." Questionnaires were distributed to 942 students from 10 secondary schools, ranging from the inner city to the agricultural periphery. The data showed that 50 percent of the students had been bullied at school at least once or twice; 44 percent admitted that they had bullied someone else; and 32 percent said they had never been involved, either as bully or victim. Other reported findings include a breakdown of the recent bullies and victims by age and sex; demographic and family characteristics of bullies; incidence of forms of bullying ranging from ostracism to violence or extortion; school location of bullying incidents; and extortion; sensor location of outlying incents; and the data on taboo against telling authority figures about bullying incidents. Three prerequisites for a successful anti-bullying policy are discussed: recog-nition by the school that the problem exits; openness in discussing it; and ownership, i.e., giving parents, teachers, and pupils a vested interest in making the anti-bullying policy succeed. Eight ref-erences are included. (TE)

Carmichael, Karla D. Peer Rating Form in Counselor Supervision. Pub Date—87 Note-14p.

Note—149.

Pub Type— Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Counseling Effectiveness, *Counselor Evaluation, Counselor Performance, *Counselor Evaluation, Counselor Fertormance, "Counseior Training, Evaluation Methods, Evaluation Utilization, Higher Education, Likert Scales, "Peer Evaluation, Role Playing, "Supervisory Methods A literature review of the use of peer supervisors in counselor training and supervision identified theories which mention the use of peers in the supervision process and revealed several points for consideration in selecting peer supervisors and implementing a peer supervision program. A Likert-style peer supervision rating form was developed and tested as a practical way to keep trainees focused on observations in counseling skills. The pur-pose of the peer supervision rating sheet was to stimulate more research in the area of peer supervision. Ten counselor trainees role-played counseling sessions, while their peers rated them. Discussions of the ratings followed, with specific interest in the difference between 1 (poor), 3 (average), and 5 (excellent) for each item on the scale. In group supervision, the peer supervisors shared the ratings with the student who was observed, and each peer supervisor discussed how the observed student might improve individual ratings. As an outgrowth of the peer su-pervision, the supervisees took a more active role in requesting help from the supervisors, and their requests for skill development were more specific than in previous years. (Indications for further research are provided, and the rating form is appended.) (TE)

Birth Order and Maladaptive Behavior in School-Aged Children.

Pub Date-77 Note-11p.

Note—11p.
Pub Type— Reports - Research (143)
EDRS Price - MFDI/PCOI Plus Postage.
Descriptors—*Behavior Disorders, *Behavior Problems, *Birth Order, Comparative Analysis, Elementary Secondary Education, *Emotional Disturbances, Family (Sociological Unit), Family Characteristics, Family Status, *Family Structure, Problem Children, Student Behavior Identifiers—Adler (Affred)

Identifiers—Adler (Alfred)
Drawing on Alfred Adler's theories on the effect of birth order on maladaptive behavior in children, this study focused on the relationship between birth order and the referral to counseling of school-aged children with maladaptive disorder. School-aged children (N=217) with academic or behavioral problems, ages 5 to 18, were referred to the staff of a regional interdisciplinary center for evaluation during a 5-year period. Each child was evaluated by specialists in each of the three disciplines repre-sented in the center: (1) speech, language, and hearing; (2) reading; and (3) counseling. On the basis of staff recommendations, the subjects were placed in either a counseling group (Group I) or a no-counseling group (Group II), and designated either first-born, middle-born, or last-born. Data on family structure (intact, single-parent, and blended); parents' family background; socioeconomic status; and number, age, and sex of siblings were also gathered.

All predictors were simultaneously entered into a multiple regression equation for stepwise analysis. Although none of the predictors was found to vary significantly, the study results support previous findings that more males and first born students are referred to clinics for behavior and academic prob-lems. A unique formula for family density is pres-ented, and recommendations for further study and refinement of birth order studies are offered. References are included. (TE)

Identifiers—*African Americans

Communication between individuals from different cultures can fail simply because of the culturally-oriented assumptions that speakers make about one another's responses. The higher rate of discipline referrals among African-American males in-volves behavior that is related to cultural and communicative issues. In an effort to build their communicative competence, these adolescents adopt a highly stylized use of words and gestures, many of which can be misinterpreted by those who are unfamiliar with their culture. Current demographics indicate that only 1 out of 10 teachers will be African-American; the other 9 will be Caucasian, probably females whose undergraduate education has presented them with little or no knowledge of the cultural orientation of African-American males. This essay tries to sensitize teachers to three commonly used verbal strategies, namely, rappin', woo-fin', and playing the dozens-their origin, purpose, and use in the classroom-and provides alternatives for teachers so that they can maximize the commu-nicative competence of those African-American males who use these strategies. A list of 45 refer-ences is included. (TE)

two dilemmas, one concerning Affirmative Action programs and the second concerning minority stu-dent admission to college, it was discerned that these students largely held viewpoints that were consistent with conceptions of a "uniform" culture as opposed to conceptions of diversity and pluralism. In addition, there was a note of pessimism throughout many of the responses, suggesting that throughout many of the responses, suggesting that ittle could ultimately be done about racial prejudice and discrimination. The problem, then, was to attempt to develop a learning program adaptable in the college classroom that could address issues of diversity and pluralism phrased in the "language of possibility." A three-step learning cycle is described that used recent research and writing in narrative and critical thinking processes. The steps involved: (1) narrative development of students' personal "di-lemmas;" (2) facilitating structural connections between individual experience, structures of knowledge, and the structure of society; and (3) intergroup relations and cooperative learning, linking individual identity and the social structures of culture to cooperative learning and conflict resolution. Efficacy, "Stress Management, Stress Variables,
Wishdrawal (Psychologia)

Withdrawal (Psychology)
Identifiers—Adolescent Self Efficacy Scale

This study was conducted to develop a scale that assesses perceptions of self-efficacy in potentially assesses perceptions of self-efficacy in potentially stressful situations for chemically dependent adolescents. Adolescent subjects (N = 100) currently receiving treatment for chemical dependency were given a 20-situation questionnaire, the Adolescent Self-Efficacy Scale (ASES). Students were requested to review the 20 situations and respond on a scale of 1 to 10 whether they would feel most or least confident in their ability to resist drug use or abuse. A factor analysis was employed to identify and summarize possible interrelationships among the individual variables; this yielded three factors:
(1) emotional/interpersonal; (2) social/recreational; and (3) grief/loss. In Factors 1 and 3, the participants viewed their drug use as a response to the stress of conflict and loss resolution. Factor 2 seemed to reflect a need to enhance pleasure and enjoyment of events through the use of drugs. These findings suggest that substance abuse among adolescent populations often results from situational stressors. Implications for future study and applica-tion of self-efficacy concepts to treatment are considered, and references are included. (TE)

Volunteers (N=83) from paired classes, including Mexican Americans, Anglo Americans, Black Americans and others, visually classified one another in regard to ethnic identity, in an attempt to assess the accuracy of visual identification when used by researchers to achieve such classification. Findings were that major ethnic groups were quite accurate in identifying Anglo and Black Americans, but all respondents erred twice as much in classify-ing Mexican Americans. Subjects self-labeled as Other were often misclassified by all respondents, and they were also less accurate in classifying the stimulus person. The conclusion was drawn that visual determination of ethnicity should probably be used only when no other means is available. (Au-thor/TE)

Counseling, Family Environment, Family Prob-lems, Family Violence, *Intervention, Parent Child Relationship, *Psychological Patterns, *Sexual Abuse, Sexuality, Victims of Crime This book provides a framework for understand-

ing the dimensions (scope, taxonomy, philosophy) and dynamics (individual, familial, and societal) of child sexual abuse. The major focus is on integrated intervention strategies for any professional who must work with incomplete information. Chapter 1 provides an overview of the problem of child sexual abuse, delineating the scope and effects of the prob-lem, providing a taxonomy, discussing psychologi-cal characteristics of offenders, and surveying legal issues and the criminal justice system. Chapter 2 focuses on intervention strategies for the victim, whether young, prepubescent, or adolescent. Chap-ter 3 discusses intervention strategies for the offender, including assessment, diagnosis, categorization, and treatment. Chapter 4 discusses intervention strategies for the family and for adult survivors. Chapter 5 presents a series of case studies illustrating various categories of offenders and victims. Cases concern: (1) dictatorial/possessive fa ther; (2) dependent father; (3) pseudoadult child; (4) pedophiles; (5) adolescent survivor; (6) adult survivor; (7) female offender; and (8) isolated treatment of victim. Chapter 6, "The Road Ahead," summar-izes the complexity of the issue and identifies future needs for research. References are included. (TE)

Care Homes, Psychological Patterns, Retirement, Stress Management, Terminal Illness This book was developed to assist counselors and other caregivers in working with adult children and their aging parents. The first chapter addresses nor-mative developmental issues in later life. This includes the demography of aging, theories of aging, and attitudes toward older persons, along with sug-gestions for identifying at-risk populations, implications for counselors, and criteria for choosing assessment instruments for older persons. The second chapter addresses several issues of aging, including depression, suicide, drug and alcohol abuse, and organic brain diseases, that are critical for counselors. The third chapter examines psychosocial concerns of caregivers and adult children as well as family relationships and patterns in later life: aging and loss, the retirement transition, and the transi-tion to grandparenthood. The fourth chapter deals with the possible needs of both older persons and adult children in relation to four family stress situations: caregiving, institutionalization, elder abuse, and death and dying. The final chapter provides general information useful to counselors working general information useful to counselors working with adult children and aging parents. The focus is on building and maintaining healthy, positive rela-tionships. Several counseling methods are de-scribed, including bibliotherapy, life review, genograms, and early recollections. An annotated list of assessment instruments is appended, along with an extensive list of references. (TE)

This book is a product of a research effort to iden.

This book is a product of a research effort to identify exemplary elementary school guidance and counseling programs and practices across the United States. It consists of program descriptions from 134 programs in 40 states, Puerto Rico, and the District of Columbia. Section 1 gives the background of how programs were identified and se-lected. Section 2 provides a detailed account of how 10 exemplary programs were chosen from those nominated; descriptions and sample activities of these programs are presented and the address and telephone number of a contact person is given. Section 3 includes information on the remainder of the programs. This information is presented in matrix form, alphabetized by state and categorized and summarized into several domains that represent the major emphases of elementary counseling and guid-ance. The final section describes how this research effort was evaluated and draws several conclusions about the future of developmental elementary school counseling. Current references and addi-tional resources intended to help counselors who are beginning new programs as well as those who are seeking new ideas are appended. (TE)

rive Analysis, Correlation, Grade Point Average, High Schools, High School Students, Predictor Variables, Racial Differences, Self Concept Mea-sures, *Self Esteem, Sex Differences, *Student Characteristics, *Student Motivation

This study investigated the relationship between self-esteem and academic achievement in a group of 150 high, medium, and low achievers at a large mid-western public high school. Correlating data from the Coopersmith Inventory of self-esteem with grades, cumulative grade point averages, and class rank, the study disclosed a positive correlation between self-esteem and academic achievement, and also revealed secondary correlations between self-esteem, academic achievement, gender, and race. Chapter 1 covers the introduction, the back-ground of the problem, purpose, significance of the study, definition of terms, general hypothesis, and limitations of the study. Chapter 2 reviews the perti-nent literature related to the historical background of the problem of self-esteem and student achievement, discusses pertinent expert opinion, and summarizes current knowledge in this area. Chapter 3 describes the research procedures and design, while Chapter 4 describes the findings related to each hypothesis. Finally, chapter 5 summarizes the study's results, conclusions, and implications. Besides a positive correlation between self-esteem and academic achievement, the report notes that the study found no significant differences between males and females, or between races, with respect to self-esteem. National and international implications of the correlation between self-esteem and academic achievement are discussed. A bibliography follows, and instrumentation is appended, along with related materials. (TE)

A study explored the perceptions of 155 early field experience (EFE) elementary education majors who were in one of six sections of a reading methods course at a midwestern university. Responses to an open-ended final examination ques-tion at the end of three consecutive semesters asked students to describe and evaluate the classroom reading instruction in one of their 2-week field expereacing instruction in one of item? sweet, field experiences. Three hypotheses grounded in the data were developed using the constant comparative technique: (1) the majority of pre-service students sent into elementary school classrooms for an EFE perceive the reading instruction and organization they observe to be contradictory to what they are taught in their reading methods class at the university; (2) students see the reality of the elementary ool classroom as basal readers; and (3) students experience large group reading instruction as common a practice as the traditional small group instruction of three or more groups. The irony and the dilemma are that what teachers teach students and anticipate they experience and use often never actu-ally happens in real life. (One table of data is in-cluded and 47 references are attached.) (MG)

Identifiers-Descriptive Research A study was conducted to develop an improved program of teacher education in diagnosis of reading difficulties in a graduate reading practicum. Fifteen teachers in the pilot study worked with one or two students daily for 6 weeks. The pilot study offered agest indication that teachers. fered some indication that teachers' preservice and inservice experiences may have emphasized me-chanical procedures and failed to prepare them adequately for the roles of problem solver and educational decision maker. The program objectives remained the same for the second year, but efforts increased to prepare the new cohort of eight teacher-participants for ethnographic data collec-tion. Results of the second year study indicated the following results: (1) teachers needed and requested guidance in observing, recording, and interpreting children's reading behaviors; (2) prior teaching and learning experiences had greater transfer and impact on teacher's observations than textbooks or lectures; (3) affective components of reading domi-nated teachers' observations; (4) concept of problem solving by trial teaching was unfamiliar to the subjects; (5) video taped lessons may be more useful to teachers when the instructor first demonstrates observation and problem-solving techniques in a non-threatening situation; (6) courses for preservice teachers should provide specific instruction and carefully sequenced opportunities for practical ex-perience in observation skills and collaborative problem solving; and (7) teachers must be given conportunities for problem solving and decision mak-

ing, not only in undergraduate and graduate educa-tion, but in their daily work in the schools. (Two tables of data are included.) (MG) CS 010 201 Sulentic, Margaret Mary

Approach Identifiers—Iowa Tests of Basic Skills

A study was conducted to determine the appropri-ateness of a particular whole language program, enateness of a particular whose inaguage program, en-titled "Project Victory," designed specifically for a group of high-risk, seventh-grade students in a pre-dominately urban intermediate public achool. Sub-jects were 20 students identified as high-risk by their school district on the basis of the lowa Tests of Basic Skills performance scores. Project Victory consisted of a 3-hour morning block of language instruction based on the philosophical theory of whole language. The program integrated the lan-guage processes of reading, writing, speaking, listen-ing, and thinking and focused on functional, relevant literature such as magazines, newspapers, and trade books. Curriculum and instruction were based on the specific language needs of the student. Both formal and informal evaluation procedures were used to assess the program. Observations re-vealed a change in student' attitudes and students appeared more inclined to work cooperatively as the year progressed. Emerging patterns of free reading material choices also became apparent. Students also appeared calmer, more trusting, and more willing to take risks in the classroom as the year progressed. It was observed that students learned positively from their mistakes. An increase in paren-tal involvement was also noted. Based on the posithe involvement was also noted. Based on the posi-tive results of the study, further research on curriculum and instruction for high-risk students based on the theory of whole language is needed. (Four tables of data are included, and 52 references (Four tables of data are included, and 32 Peterences are attached. Appendixes include: Iowa Department of Public Instruction Model for Language Arts; additional classroom resources; Project Victory objectives; reading skills sequence; daily schedule of activities; weekly activities; and writing samples.) Grades, Learning Activities, Reading Research, Research Tools
Identifiers—*Dictionary Skills
A study was conducted in an effort to better un-

derstand what assumptions and strategies students bring with them to the task of dictionary use as well as what knowledge they take away from it. Data were collected in three middle-class school systems in the suburbs of a large, Midwestern city. Partici-pants were 55 fourth-grade students ranking stanine 4 or above on the district assessment tests. The basic task in which the students were observed was the completion of a dictionary assignment common to fourth-grade reading instruction, using the dictionary to locate an entry for a targeted word which was presented in sentence context. Though the priry concern was the analysis of student comm and questions and teacher observations, a perfor-mance score was determined to analyze the comparability of the group performance. Results indicated two insights for instruction and several directions for further classroom research. The first insight was for further classroom research. The first insight was the recognition that dictionaries could be much more "user-friendly" for middle-school students. Students had some basic suggestions for dictionary designers that were interesting and relevant to the task. The second insight, the most dramatic one for the teachers, concerned the relative ineffectiveness of the dictionary task. For most of the teachers, this led to a resolution to reconsider the use of the task and to experiment with different types of instruction. (Five tables of data are included, and one appendix from the Scott Foresman Intermediate Dictionary is attached.) (MG)

Descriptors—*Critical Thinking, Logic, Logical
Thinking, Two Year Colleges
Identifiers—*Fallacies, Ionesco (Eugene)
Eugene Ionesco's play "Rhinoceros" is a paradigm of mindlessness in action, of the bizarre, ab-

surd, and sometimes frightening humor of uncritical surd, and sometimes frightening numor or uncritical thinking. A false or presumed cause is dramatized at the very opening of Act I, the first of a string of fallacies braided throughout all three acts. A standard reading of the play holds that Ionesco's theme is the deadening effect of materialistic bourgeois society. However, it may be more accurate to say society. However, it may be more accurate to say that the playwright's concern is with the degenera-tion of language-distortions and faulty reasonings are heaped up until the comic becomes grotesque and ultimately tragic. The very end of the play re-turns to the very beginning of logic, the law of iden-tity, and is a perfect ending to lift the audience out of a nearly unintelligible morass of fallacy and obfuscation. A practicum project emphasizing critical thinking

A practicum project emphasizing critical thinking skills was undertaken in an eighth grade history class to make students aware of the nature and seri-ousness of plagiarism. The 10-week unit was pre-ceded by a reading comprehension test and an essay assignment on a major Civil War battle. Plagiarized portions of the essays were highlighted and the per-centage of plagiarism was determined and recorded at the top of each essay. The students were then taught skills to help them decrease plagiarism. An integrated approach incorporating notetaking skills, reading comprehension, paraphrasing skills, writing skills and several summarizing techniques was used. During writing assignments, students were also al-lowed to use an informal reference page in any form and style they chose to encourage them to give credit when credit was due. At the end of the unit, students were again given a reading test and a writ-ing assignment. Results revealed improved reading comprehension and significantly reduced instances of plagiarism. (Thirteen references and two appen-dixes containing the results of the reading and writ-ing tests are attached.) (KEH)

Reading Skins, "Reading Strategies, "Remedial Reading, Schemats (Cognition) Identifiers—"Semantic Webbing
A key strategy for teaching inferential comprehension was implemented in a seventh-grade classroom of students who were at least one year below room of students who were at least one year below grade level in reading. The purpose was to improve the students' inferential comprehension skills. The implementation began with a diagnostic reading test followed by several weeks of introducing different forms of semantic webbing to help clarify basal reader stories and other activities. After a mid-point teacher-made exam showed good results, a few more weeks of webbing were undertaken before a final diagnostic reading test was given to monitor progress. A comparison of the beginning and ending progress. A comparison or the organizing and enough test scores indicated 33% of the students showed a 5-point increase in percentile rank. Results indi-cated semantic webbing to be an effective tool for improving the inferential comprehension of some students. (Fifteen references are attached. Appendixes include a figure showing the basic web, a list of left-brained right-brained skills, seven figures showing seven types of webbing, and a tabulation of the seventh grade final comparison.) Mapping, Text Factors
A practicum was conducted to improve reading comprehension in classroom performance with the basal reading series and on norm-referenced tests. Subjects included a fifth-grade class of 28 students Subjects included a little-grade class of 28 students who were paired with another little-grade class as peer teachers. New skills were taught and practiced with the target population early in the week. On Thursdays, the lesson to be peer-taught was reviewed. The students were grouped on Fridays for the peer tutoring sessions. The Gates-MacGinitie Reading Test (comprehension section) was administrational transfer of the properties of the students of the stud tered as a post-test. The criterion for success was a 3-month gain on the test by 75% of the students following the 12-week implementation program. A tally of the scores of the 15 students who finished the program revealed that only 60% met the objection. tive; however, they did it with a 4.7 month gain. Results indicated that peer tutoring can increase the rate of completion of tasks, and that the strategies implemented are effective in raising reading comprehension scores. (Seventeen references are attached. Appendixes include: a table showing increases and decreases in stanines from grades three to four; population data; information on using context clues in science, social studies, and reading fifth-grade guide and worksheet for the study of morphemes; text maps for invertebrates, clouds, and the War of 1812; directions for compare/contrast text structure; 1990 stanine analysis; grade and completion rate analysis; and tables showing per-centage of peer teaching tasks completed and scores on the Gates-MacGinitie pretest and posttest.) designed and implemented to increase the reading comprehension for at-risk students. Subjects, 11 comprenension for acrisis students. Success, if fourth graders in two different classes, were chosen on the basis of below grade reading level as evidenced by both classroom performance and national achievement tests' score. The 10-week reading program emphasized activities centering around four children's literature stories using a non-traditional format. The instructional method utilized literaased videos in conjunction with corresponding literature books for each student. Strategies assisted the targeted population to improve reading

comprehension, develop a more positive attitude toward reading, increase knowledge of the chil-dren's classics, and increase awareness of the additional time spent on reading within the classroom. Evaluation of the subjects after completion of the unit consisted of comparison between a nationally normed test presented before and after implementation, teacher-made pre- and post-evaluations, teacher observations, and a student survey. Results revealed a significant gain in the reading grade level cores as well as improved attitudes toward reading (Six tables of data are included; 18 references and 22 appendixes containing evaluations and activities administered for each of the four stories are attached.) Strategies, "Student Autuacies Identifiers—Test of Adult Basic Education
An integrated reading program was developed and implemented to raise reading comprehension levels and attitudes toward reading in two groups of urban comprehensive high school students. A targeted group of 10th-grade English 2 Regular and English 2 Skills students was established for the program with the objective to reduce reading deficits that ranged from .5 to 6.5 grade levels. The researcher-created Reading Enhancement and Achievement Delivery System (READS) program contained six strategies (1) discussing students 'attitudes and goals; (2) creating a positive environment; (3) sharing literature; (4) reading for an audience; (5) active learning; and (6) a computerized reading program. An average growth in reading ized reading program. An average growth in reading comprehension of 14 to 16 months was determined comprehension of 14 to 16 months was determined and measured by the Test of Adult Basic Education over the 18-week period. A change in attitude was determined by a student attitudinal survey. It was concluded that by combining traditional reading strategies and computer-assisted instruction, students' reading comprehension levels and attitudes toward reading improved. (Two figures and two tables of data are included. Twenty-nine references and a 37-item bibliography are attached. Appendixes include the proposed timeline for the READS program, computer lab rules, progress reports, an attitude survey, and a letter of transmittal.) (Author/SR)

An instructional program was designed to im-prove the oral language skills of kindergarten stu-dents. The target group consisted of 10 students who, according to their scores on the Yellow Brick who, according to their scores on the Fellow Brick Road Language Battery, were in need of a strong language development program. The instructional plan was based on the Shared Book Experience and other components of the Whole Language Ap-proach. Also included in the project was a parent involvement program. The Test of Language Devel-opment-Primary, an oral skills checklist, and a parental log were used to measure the effectiveness of the programs. Results of these measures indicated that exposure to the Whole Language Approach successfully improved the oral language skills of the target group. It was also concluded that exposure to a structured parent involvement program significantly increased the level of parent involvement. (Sixteen references are attached. Appendixes include materials and activities used in both the instructional and parent involvement programs and the oral skills checklist.) (Author/SR)

Identifiers-Parent Readers Program An intergenerational literacy program addresses the needs of adult students enrolled in remedial reading classes at a community college. Their class-room behavior marked by passivity or anxiety, these students are usually able to derive the surface meanings of familiar text, but demonstrate little analytic or reflective thinking about what was read. The program consists of a workshop series that uses chilgram consusts or a workshop series that uses chi-drem's literature to promote reading development. Reading comprehension strategies that promote an-alytic thinking and reflection are demonstrated and practiced using the childrem's books. At the end of the workshop session, the children's books are borrowed for home reading with children. At the following session, parents share their home reading experiences. Peer practice, group discussion, and sharing of home experiences are key features of the snaring of home experiences are key features of the program. The program's overall aim is to provide enjoyable learning experiences that adult family members can replicate with their children at home to the benefit of both generations. As an unantici-pated outcome of the program, signs of outreach to a wider community were noted. Several participants have disseminated the program to neighborhood or church groups, summer reading programs, and homeless shelters. (RS)

Identifiers-Cultural Literacy, Hirsch (E D) College professors in the various disciplines can improve their students' reading ability by instruct-ing them to use reading to learn the discipline. First, professors can examine the goals of their syllabi (academic, utilitarian, romantic, developmental or emancipatory) in relation to reading, since most courses are predicated upon reading. Since most subsume objectives and criteria by which students use reading to learn, e.g., problem-solving, real-world situations, discovery, clarification, or participation. Second, professors need to emphasize that reading to learn is a process from which students are expected to present products for evaluation. It is essential to teach process and content simultaneously and to do so in relation to the goals and objectives of the course. An effective method is to objectives of the course. An effective mention is to show the students how the teacher is a learner while still being the teacher. Third, professors need to teach students the discipline-specific vocabulary they need to know to learn from the assigned read-ing, by building a schemata that improves reading ing, by building a schemata that improves reading comprehension. Finally, the professor's performance in the classroom counts. By sharing enthusi-astically the serious reading (and writing, researching, creating, and producing) they do in their disciplines, professors can better involve their students in the subject matter. of seventh grade students in a middle school in Georgia. The core of the program was the use of novels selected with the particular interests of adonovers selected with the particular interests of ado-lescents in mind. Sixty-four students in the develop-mental and accelerated reading classes participated in the 10-week program, which allowed for self-se-lection of books, self-pacing in reading rate, and uninterrupted time to read. A management system was formulated to allow for independent work by the students. Student/teacher conferences were built into the program. Critical reading skills were taught by a variety of methods and materials, in-cluding teacher instruction, worksheets geared to the individual books, and independent practice us-ing reading kits and other individualized practice material. Pre- and posttests of critical reading skills, while showing higher scores for 70% of the students, did not show the gains projected at the start of the program. However, student reaction to the program was excellent: greater enthusiasm for reading was immediate and sustained; student self-management worked well; and creative book projects were devised and well received. (Twenty-three references are attached, and three appendixes contain a list of selected novels, information on the management system, and a dissemination packet.) (SR)

Identifiers—Student Self Report
The purpose of the case study reported in this
paper was to investigate the level of self-knowledge
and strategic awareness of above average college
students and to determine whether students could
berefit from instruction in learning and study stratebenefit from instruction in learning and study strategies. Subjects, 11 students with a mean combined Scholastic Aptitude Test score of 1,100 attending a

small private liberal arts college with high admissions standards, participated in a 2-week workshop on learning strategies conducted by the experimenter. Workshop sessions included instruction in prereading, during reading, and postreading strate-gies which would enhance independent learning and promote retention of written material by increasing metacomprehension ability. Subjects completed metacomprenension ability. Subjects completed pre- and post-objective tests, pre- and post-summa-ries, and a self-report measure. Results indicated that the subjects were surprisingly deficient in awareness and use of efficient strategies for learning from text and that they can benefit from strategy instruction, which promotes increased levels of instruction which promotes increased levels of awareness of the variables of self, task, text, and strategy. A study demonstrated that young children who have difficulty with phonics can be taught to read through other methods, that phonics is only one of the many useful strategies that a child can employ, and that many contextual strategies are easier to learn and more reliable than phonics. A case study was conducted during an intervention with a young child who was identified as being at-risk of reading failure. The approach used was a series of successive steps. Stage 1 was word-collection; i.e., broadening the little girl's repertoire of known words by focu ing her attention on print in the environment. Stage ing ner attention in print in environment. Stage 2 involved generating sentences with words that she recognized. Stage 3 involved the creation of homemade books using sentences which she had already successfully read. Stage 4 was called "real reading for a reason," with books divided into three groups: books the child knew by heart; books she was famil-iar with but had not memorized; and books that were completely new to her. As a result of the study, certain truths seem evident: (1) print awarene should precede phonics instruction; (2) phonics should be implemented on a need-to-know basis; and (3) when phonics is used, other strategies should be equally emphasized. It is too often the practice that the child is remediated to fit the method, whereas it is the conclusion of this study that the method should be adapted to fit the child. (Fifteen references are attached. The appendix consists of transcripts of 11 slides, including a list of readiness behaviors, sample writing and writing materials from the study, an outline of the four-stage process to examples.) Reading
Identifiers—Reading Motivation
A curriculum framework was developed for a high school remedial reading program that combined the philosophy of immersion in stimulating reading experiences with that of strengthening the students language experience. The first component was adapted for those students with first- and thirdgrade reading ability. A wide variety of comprehen-sion-building methods was used with relevant read-ing materials to immerse students in enjoyable and successful reading experiences. To foster increased automaticity, the same reading materials were used in conjunction with a number of recognition stratein conjunction with a number of recognition strategies (sight word, analogies, word mapping, cloze exercises) for student practice in language experience. The second component was developed for those students with fourth- to eighth-grade reading ability who had developed to the threshold of the interpretive level of reading but remained disabled readers. The goals and methods remained similar to the first component-only the innovative reading materials were changed to reflect the reading skills. materials were changed to reflect the reading skills of these upper-ability remedial students. (A list of reading materials is attached.) (KEH)

For this practicum three methods for improving sight vocabulary for first graders were developed and implemented. Goals were to increase vocabuand implemented. Goals were to increase Vocabulary recognition, improve students' attitudes toward reading, and raise critical thinking levels using parental support. The program, which involved 10 students, took place in 3 phases allowing 4 weeks per subject. The three methods used were flashcards, games, and parental support. A pretest and posttest were administered during each phase. Results indicated the greatest success in phase 2 using games to teach vocabulary. (Three tables are included. Appendixes include prior reading averages, pretest and posttest scores, parental packet, and tally scores for reading selection.) (Author/SR)

Designed to encourage students in grades 7-12 to

Designed to encourage students in grades 7-12 to make reading a habit, this annotated booklist con-tains over 400 titles of fiction and nonfiction books published between 1987 and 1989. It is intended for students who are able to read but lack the motivation to do so because they have not encountered books that speak to their interests and concerns. The titles represent a variety of books of high quality, some series literature, and some "fast-read" books that deal with topics of interest to the average adolescent. Titles and annotations are arranged un-der the following categories: (1) adventure; (2) animals; (3) biography; (4) death; (5) ethnic; (6) family mais; (3) niography; (4) death; (3) ethnic; (9) ramily life; (7) fantasy; (8) folklore and legends; (9) friendship; (10) growing up; (11) health; (12) histor-ical fiction; (13) history; (14) how-to; (15) humor; (16) love and romance; (17) mystery; (18) poetry; (19) science; (20) science fiction; (21) social problems; (22) sports; (23) supernatural; and (24) travel. A directory of publishers is included, as well as author, title, and subject indexes. (SR)

A literature based reading program was developed
to improve reading comprehension skills of 14 students in a Chapter 1 pre-first grade class. Instead of using a basal reader for instruction, the students were exposed to trade or literature books, The reading strategies that were pre- and posttested were recognition of a sight vocabulary, recognition of the letters of the alphabet, and recognition of family rhyming words. The results indicated a marked improvement in reading comprehension as well as inreased student self-esteem from success in reading. (Nineteen references and 18 appendixes containing testing instruments and results as well as a suggested list of appropriate trade books are attached.) (Author/KEH)

Identifiers—Education Consolidation Improvement Act Chapter I, Emergent Literacy, Predictable Books, *Reading Fluency, Reading Miscue Inventory

A practicum addressed the problem of lack of flu-ency of learning-disabled and low-achieving stu-dents (N=24) retained in the first grade by using predictable books written in a natural manner emphasizing the children's natural language. Two eval-uation procedures from the Reading Miscue Inventory were used to determine the degree to which students reduced miscues that altered the meaning of the text. Retelling of the story gave the meaning of the eart. Retelling of the story gave the reader an opportunity to enhance the construction of meaning. Strategies based upon a holistic view of the reading were implemented to provide students with the ability to sample, predict, and confirm as they made use of the knowledge, within a pragmatic context, of the syntactic, semantic, and graphophonic cueing systems, each interacting in order to process print. Results indicated decreased levels of miscues, taken individually and in sentence context, and a shift in attitude from a subskills or skills view of reading to a more holistic and personal view of reading. Fluency was increased as measured by the goals set for the study. (Two tables of data are included, and 47 references are attached. Appendixes include an analysis of miscues, book selection evaluand parental involvement forms.) (Auation, and thor/MG)

tudes, Reading Interests, Reading Research, School Surveys, Sex Differences, *Student Atti-tudes, *Sustained Silent Reading, Teacher Attitudes, Teacher Behavior Identifiers—Pulaski School District WI, Student

A study examined whether sustained silent read-ing produced positive attitudes toward reading. Sub-583 intermediate grade students an teachers in the 5 elementary schools in the Pulaski, Wisconsin School District, were questioned about wisconsin School District, were questioned about reading on a broad basis and about their attitudes toward Sustained Silent Reading (SSR) in particular. Results indicated that: (1) only a slight majority of students were not allowed to select materials they wanted to read; (2) the time of day the SSR was held that the state of t had no bearing on student behavior; (3) no relation-ship was found between the students' desire to have SSR and their present attitude toward SSR; (4) no difference was found in the effectiveness of daily versus non-daily SSR programs; (5) many teachers did not model recreational reading effectively; (6) students' interest in reading was aroused, but only during SSR; and (7) there was a progressive diminishing of interest in reading in the higher grade levels while positive attitudes by gender also diminished. Recommendations include the adoption of an SSR programs in the school district since tion of an SSR program in the school district since the program had shown some positive effects. (Eighteen tables of data are included; 35 references and the survey instruments are attached.) (RS)

Identifiers-Florida, Gates MacGinitie Reading

A practicum addressed the problem of achieving reading speed and accuracy along with reading comprehension in an eighth grade remedial class, by implementing short timed reading passages and teacher-made speed tapes. Eleven students were pretested and posttested with the Gates-MacGinitie recasted and postessed with the Uates-MacUnitite reading test in comprehension, speed, and accuracy. The 10-week implementation was successful in meeting most of its objectives. Results revealed that 91% of the students met the required gain of .04 year in reading comprehension. The actual mean gain was one year. Results demonstrated that a remedial target group could gain in reading comprehension and reading rate in a 10-week period. Research also demonstrated that remedial reading students increase their reading comprehension at a much greater rate than their reading speed and accuracy. (Appendixes include individual student scores, sample student charts, reading rate formula, survey results, and a sample of the type of materials used by the students.) (Author/MG)

A supplemental reading program designed to in-crease basic reading vocabulary was implemented as a practicum project with first-grade students dem-onstrating deficiencies in reading. The students were assigned to teams (organized according to alwhere assigned to cleans togrammed according to air phabetized lists of topics generated by the students) to write, illustrate, and read books cooperatively with teacher direction. A pre/post vocabulary test was used to measure the effectiveness of the program. Results indicated increased interest in reading and writing as well as increased vocabulary ability. Findings suggest that the team approach is easily adapted to any existing reading program and provides a vehicle to enhance reading and writing achievement. Five tables of data are included. Appendixes include a teacher survey, a parent survey, data indicating need for program, an observation checklist, a letter to parents, a sample team book, graphic analysis of test results, and comments from teachers and parents. Identifying effective reading instruction through "process-product" research narrowly focuses attention on immediate practice and desirable outcomes as measured by tests. Failure to conduct long-term research and make instructional decisions within a historical context may discourage discovering new and innovative ways to teach reading. "Processproduct" research implies that effective reading in-struction is static, when in reality it is highly subject to social and educational change. (Author)

*Kindergarten Children, Parent Student Relation-ship, Primary Education, Reading Attitudes, Reading Habits, Reading Programs, *Recre-ational Reading, Urban Education Identifiers—*Emergent Literacy, Text Factors A study explored the development of emergent literacy among inner-city kindergarten children par-ticipating in a "read-at-home" program. The pro-gram focused on the enjoyment of reading, required minimal involvement from the classroom teacher, and encouraged parents to become involved in any and encouraged parents to become involved in any way they wanted. Twenty-eight children, enrolled in two classes, each received a storybook to take home (and to keep) approximately every 2 weeks for 14 weeks. Emergent literacy was assessed from several perspectives: parental observation, class-room teacher observation, classroom behavior observed during book distribution, and emergent reading ability using E. Sulzby's Emergent Reading Ability Judgments Scale (ERAJ) and B. Otto's categories of assisted reading. Text complexity was varied between classes: one class received traditional storybooks/tradebooks, and the other received commercially developed books for beginning readcommercially developed books for beginning read-ers. The Read-at-Home program received positive evaluations from parents (88% reported their chi-dren used the books every day or several times a week) and the classroom teacher (who reported children's increasing interest, with children asking repeatedly when they would get their new books). Analysis of pre- and post-ERAJ scores indicated that 75% of the children read at a higher level at the end of the project. No children focused on the print device the presesses ment; 10 of the 28 children during the preassessment; 10 of the 28 children were attempting to track print at postassessment. Text complexity appeared to influence the emergent reading ability levels of some children. (Two tables of data are included, and 22 references are attached. An appendix lists the books used in the program.)

*Oceania The Oceania Literacy Development Program is conducted by the International Reading Association's International Development in Oceania Com-mittee in conjunction with the Australian and New

Zealand Reading Associations. The program was designed around three distinct but interdependent roles for the groups involved. First, direction is proroles for the groups involved. First, direction is provided by key literacy workers in the 11 countries of the South Pacific served by the project (it is believed that by identifying key literacy workers in each country it will be possible to identify common as well as specific needs in a manner that is sensitive to local cultural factors. Second, sponsorship and organizational support is provided through the consortium of professional associations. And third, financial support is provided by aid agencies and those concerned for the development of literacy in Oceania. Within the program three target areas Oceania. Within the program three target areas have so far been identified for action: book development; children's literature provision; and teacher development. The fundamental task of phase one of the South Pacific Literacy Project is identifying successful literacy teaching practices that are occurring and exploring what can be learned from those situations to help other teachers. By focusing on existing successful programs, iteracy teaching practices can be seen in a naturally occurring context of historical, economic, socio-cultural and political as well as ed-ucational forces. The challenge is to understand these shaping influences so as to identify how best to assist other teachers as they take on more effec-tive methods of instruction. (MG)

The history of literacy education in Morocco, like that of the country as a whole, spans over two millennia. The history of literacy education begins in the early Islamic era (eighth century A.D.), continues through the colonial period, and ends in the post-colonial period. A review of the major development in the post-colonial period. ments in the area of literacy education in Morocco indicates that: (1) the religious factor has always been an important force behind literacy teaching and learning; (2) rote and recitation have also been consistent features of literacy learning and education in general; (3) literacy teaching and education in general have always been a function of the wider cultural and socio-economic situation; (4) the trend is toward the institutionalization of literacy educa-tion, including informal adult programs; and (5) the trend is also toward modernization and toward multiple literacies (including civic, functional, and cul-tural literacies.) Reading aloud to kindergarten children makes good educational sense. For this group, teachers should emphasize the aspects of reading aloud that promote a love of story listening as a bridge to future reading. To read aloud well, teachers should: (1) use stories with strong plots, vivid characters, and interesting settings; (2) select a book they really like; (3) prepare the material carefully; (4) allow few interruptions; (5) relax and communicate; and (6) keep the material and the listener in mind while consciously attempting to bring the two together. Achievement Tests

Achievement ress
For this practicum, a program of multimedia peer
dramatic presentations was developed to improve
the vocabulary skills of middle school students.
Each week for 10 weeks a target group of 18 randomly selected students viewed 5 short video skits (produced by broadcast arts students) which were designed to introduce and define new vocabulary terms; the target group also participated in daily terms; the target group also participated in daily writing activities to reinforce the new vocabulary skills. A control group of 18 students was also randomly selected to learn the same vocabulary through similar writing activities but without viewing the television broadcasts. Both groups were given a pretest prior to implementation of the practicum and a posttest at the conclusion of the treatment to determine the extent of mastery of 50 new vocabulary terms. Results revealed that the control group achieved a median gain of two points which were attributed to normal learning activities and exposure to reinforcement exercises, while the target group evidenced significantly higher levels of achievement in vocabulary skills. Findings suggest that the utilization of multimedia peer dramatic presentations to introduce and reinforce vocabulary skills is a successful means of facilitating learning. (Five tables of data are included; three appendixes including the vocabulary pre- and posttest, activities booklet, and teacher's lexicon are attached.) (KEH)

For the dyslexic and others with similar problems,

a revision of the sequence of modalities known as VAKT (for visual, auditory, kinesthetic, tactile) might achieve more effective and more rapid remediation. The new sequence is designated as TAK/v. The subordination of the visual modality is based on the recent identification of visual processing defi-ciency in dyslexics, as well as on previous hypothe-ses, suggesting the desirability of substituting the tactile modality for the visual modality in the initial stages of remediation. The use of the left hand is suggested for this tactile scanning of three-dimensional letters to access the right hemisphere. (One figure is included, and 14 references are attached.)

Descriptors—Brain Hemisphere Functions, *Dyslexia, *Learning Disabilities, Reading Difficulties, Reading Failure, Spelling, *Word Recognition Identifiers—Brain Functions, Brain Research A reasonably accurate knowledge of the location of certain learning functions has been achieved through the steady accumulation of data concerning hemispheric specialization. One learning disabilities teacher (van den Honert. 1977) applied hemisphere hemispheric specialization. One tearning cusatinities teacher (van den Honert, 1977) applied hemisphere specialization techniques to eliminate processing conflicts between the hemispheres by sending word information to the left hemisphere while occupying the right hemisphere with noncompeting information. The Uniform But technique is norther avantages. tion. The Loveless-Blau technique is another examtion. The Loveless-Blau technique is another exam-ple of an effort to employ neuropsychological concepts to learning. Concentrating on spelling, these researchers cut off the visual modality alto-gether. The purpose of the technique was to stimu-late the right hemisphere, linked specifically to "menual astern" recognition by which the section "manual pattern" recognition, by using the tactile modality of left hand to right hemisphere. Further investigations using matched groups of learning dis-abled students are needed to determine which multisensory techniques are most effective: those using the right hand alone or those using the left hand alone. More research needs to be done on the abalone. More research needs to be done on the ap-sence of the visual input while learning spelling from raised letters. Also to be explored is a procedure for learning words utilizing the concomitant use of vi-sual stimulation either in the form of picture or con-figuration cres. While successful reading and figuration cres. While successful reading and writing requires the interaction of both hemispheres for normal learners, the activation of right hemisphere processing alone may hold more promise for the severely word-disabled. Descriptors—*Definitions, Dictionaries, English,
*Lexicology, Reading, Spelling
Identifiers—*Homographs, *Homophones, Words
Much confusion abounds concerning the definitions for homonyms, homophones, and homographs. Even newer as well as older dictionaries find these terms problematic. A way out of this semantic confusion would be to introduce a new word: theteronym. A heteronym is a word that is spelled the same but has a different pronunciation like the same but has a different pronunciation like "wind" (air) and "wind" (clock). The term hom-onym should be discontinued, since it is old fash-ioned, fuzzy, and cannot be defined precisely. The definitions for homophones and homographs, when used with the definition for heteronym, would be-come clearer and should remain. If teachers and curriculm writers would start using these terms, all the dictionaries would fall in line. (Two tables of current definitions and suggested clarifications are included.) (KEH)

cipals, "School Newspapers, Student Publications, Surveys Identifiers—Advisers, "Advisor Role, First Amendment, "Hazelwood School District v Kuhlmeier A study examined the opinions of high school principals and advisers regarding a free student press and adviser role to determine whether opin-

ions and practices had changed since the Hazel-wood v. Kuhlmeier decision. A survey was sent to both the newspaper adviser and the principal at 531 both the newspaper adviser and the principal at 331 schools throughout the United States during the spring semester of 1989, just one year after the court's decision. Responses were received from 220 principals and 360 advisers. Respondents were asked to indicate on a seven-point scale the intensity of their agreement or disagreement for statements regarding role of the student newspaper, control by the administration, responsibility of the adviser, controversial issues, First Amendment rights, and the Hazelwood decision. Results revealed significant shifts in intensity in all seven points from the 1985 J. W. Click and L. L. Kopenhaver survey and indicated a more alarming extent of censorship than had been hypothesized. Findings or censorship than nad oeen hypothesized. Findings suggest that advisers clearly see their role as requiring review of student copy and correction of factual inaccuracies and misspellings, even if the student cannot be told about them before publication. More research into the increased censorship conditions appears to be called for. (Five tables containing the complete results of replies and intensity measures are included.) (KEH)

This paper provides additional discussion and interpretation of the original findings of a study examining the development of writing skills across college years. The paper focuses on six interpretive problems from the mass of primary data in an at-tempt to clarify issues and block off false interpretive trails. The paper discusses: (1) the departures from purely random selection in forming the research groups; (2) the cross-sectional design of the search groups; (2) the cross-sectional design of the study, with no control of possible cohort effects; (3) the validity of impromptu writing samples; (4) the openness of the writing prompt; (5) the high ratio of variables to subjects, with identification of 14 fac-tors which account for 77 percent of total variance; and (6) the investigation of writing products only, while rhetorical intentions and compositional prowhile rhetorical infentions and compositional processes remain inferential. The paper concludes with a discussion of the dangers and benefits associated with empirical, multifactorial, exploratory, and developmental interpretation of writing. (39 references are attached.) A study examined the relationship of positive and negative evaluation statements to specific evalua-tion criteria, student characteristics, and type of writing. Subjects, 27 fifth-grade students, were asked to read samples of their own writing and writing attributed to a fictional peer. During tape-recorded interviews, the subjects were asked to rate the writing samples they read and to give reasons for rankings. Results indicated: tended to make positive comments for stories they ranked high and negative comments for stories they ranked low; (2) there were no sex differences nor any differences based on the writing achievement of the students in their ratio of positive to negative

An ethnographic study examined the interdeper dence and synergism of multiple symbol systems of first grade writers. Subjects, four first grade stunrst grade writers. Subjects, four first grade students, were followed as they engaged in playful literacy-composing with blocks, clay, shadow puppets, tissue paper collage, drawing, and written and spoken words. "Thick description" was used to record the stories of the individual children. Findings suggest that an exclusively verbal conception of language arts limits expressive potential in general, and limits writing development in particular. Findings also suggest the need to rethink what counts as "literacy." (RS)

A videotape program was designed for use in news writing classes to provide journalism students with exposure to and experience in covering press con-

exposure to and experience in covering press conferences. The mock press conference format was selected because an analysis of journalism textbooks revealed little attention to this topic, and it was decided that an elected public official from the San Diego City Council should serve as the interviewee and that students from a public affairs reporting class should serve as members of the "press corps." A staff writer from the "San Diego Union" and a A stail white hold the sail Diego Chilol and a broadcast journalism professor also participated. The 33-minute mock press conference, in which students/reporters asked researched questions over a wide array of topics, was followed by an 18-minute evaluation. Comments solicited from students and instructors in three different classes who viewed the instructors in three different classes who viewed the videotaped program during the spring 1990 semester indicated that, overall, the production was a useful educational experience. Research generating quantitative data regarding the effectiveness of this program as representative of visual communication is called for. (KEH)

A study examined the perceptions of journalism educators regarding ethical conduct in the faculty recruitment process of journalism faculty. Data were gathered by means of a mail survey to a na-tional sample of journalism faculty. Questionnaires were mailed to 490 journalism and mass communi-cation educators with 407 responding. Every third name was selected from a directory of AEJMC-affiliated institutions. Respondents were asked to rate nilated institutions. Respondents were asked to rate the importance of recruiting concepts on a five-point scale ranging from "very important" to "very unimportant." They were then asked to rate each concept a second time, indicating how they per-ceived the concept was being practiced. Results re-vealed that most journalism educators think that ethical considerations that are important to the fac-ulty recruiting process are practiced poorly. Strong concerns identified by respondents include: misrepresentation of facts, tenure and promotion policies; deceptive job advertising; and unfair practices during the interview process. Findings suggest that many educators see problems with the recruiting process even if they are part of the problem. (One table of data is included; 20 references are attached.) (KEH)

A case study of an at-risk student in a whole language "transition first grade" (representing an extra year between kindergarten and first grade) classyear between kindergarten and first grade) class-room chronicles her transition from an anxious and withdrawn student to an enthusiastic learner. Al-though it took nearly a month for the student to relax in the classroom, she then responded eagerly to writing experiences. Although a quiet person, she developed a real desire to communicate. During writing/journal time, she began to engage the adults and other children in written conversation. During and other children in written conversation. During quiet reading she could often be found reading one of the big books using a pointer. She also participated in a class project on plants. The student grew temendously during her transition first grade year because: (1) her experiences were grounded within a genuine social context; (2) she was treated as a learner; (3) she was encouraged to use art, language, and mathematics in concert to construct meaning; and (4) the teacher collaborated with the students when making curricular decisions. velopment
A practicum was designed to change the traditional methods of writing instruction which had not
been effective in meeting the developmental needs
of first-grade children. Twenty-two teachers responded to two surveys to provide problem documentation data. Four goals and instructional plans
were selected to address the problem. The first goal,
of placing emphasis on content and on stimulating
the imagination rather than on the mechanics of
writing was met through the establishment of writwriting was met through the establishment of writwriting was met through the establishment of writ-ing centers. The second goal, of providing children with extended writing opportunities using a variety of writing forms and audiences was met through a home writing plan. The third goal, of giving children opportunities to read and display their stories was met through a writing exchange program; and the final goal, of giving students unstructured time to write on subjects of their own selection was met through changes in classroom management. Strategies included giving a needs assessment survey, determining specific areas of concern to be addressed, termining specinic areas or concern to be addressed, involving parents, giving process writing inservice to teachers, organizing and maintaining writing productions, and evaluating the program. Analysis of the data showed school-wide interest in process writing as an alternative to traditional writing instruction. Students gained the image of being capalla writers through nearningful writing experiences. ble writers through meaningful writing experiences and ownership of their literacy efforts. (Two tables of data are included and 63 references are attached. Appendixes include writing surveys, sample childhood writing, letters and permission slips to parents, news clips, mid-evaluation of programs, and chil-dren's airplane stories and illustrations.) Identifiers—*Mapping, *Merchant of Venice, Shakespeare (William)

A practicum was developed which used improvisation and mapping strategies in the teaching of Shakespearean drama to increase comprehension and to develop a more positive attitude toward Shakespeare and drama in general. Subjects were a target group of 15 students enrolled in a ninth grade English class at a preparatory institution. Subjects, who first responded to an attitude survey about studying Shakespeare and took a pre-unit test, were involved in a 10-week unit on the "Merchant of Venice" in which the teaching technique was script-based improvisation with the added component of mapping. Subjects were given a post unit achievement and attitude test on the material stud-ied. Data were also collected from three English teachers, who were asked to respond to a survey investigating methods and results associated with the teaching of the dramatic text. Results revealed increased levels of achievement in test scores for recall, comprehension, and inferences. Also evident were significant differences in attitudes toward the study of Shakespearean drama. Results suggest that the teaching method was an effective solution strategy to correct attitudinal and comprehension prob-lems. (Four tables of data are included: 18 references and 7 appendixes containing the surveys, the pre/post achievement and attitude tests, and improvisation class materials are attached.) (KEH)

Education, *Journal Writing, Literary Criticism, *Literature Appreciation, Reader Response, Reading Difficulties, *Reading Writing Relation-ship, *Student Journals, Student Reaction, Teaching Methods

Identifiers-Response Learning, *Shakespeare

Reader-response journals were successfully employed in a "Reading Shakespeare" course for non-majors, making literary tradition accessible to students untrained in classical rhetoric. Students were encouraged to employ any combination of four approaches. First, students were invited to ask ques tions about the language, sequence of events, characters' actions, and theatrical conventions of the time. As the course progressed, inquiry evolved into the questioning of values held by characters and societies in the plays as well as the society of which Shakespeare was a part. The second approach in-volved observation of the text to discern patterns of imagery, behavior, and relationships. The third approach encouraged students to make connections between what they read and their own experiences as twentieth-century readers. Finally, students were asked to evaluate the plays and to explore whether asked to evaluate the plays and to explore whether or not the characters and events were meaningful to them. Overall, the response journals empowered students by giving authority to their opinions, by allowing them to choose what they wished to discuss about each play, and by permitting the class to explore a variety of approaches and responses to the plays. Essentially, the students became a community of learners, listening to each other, engaging in dialog feeling more secure in speaking out and bedialog, feeling more secure in speaking out, and be-coming richer for the shared experiences. Identifiers—Teaching Perspectives, Writing Development

A study examined the relationship between teacher's conceptions and practices during writing instruction. A pool of 27 third-, fourth-, and fifth-grade teachers completed structured questionnaires on their conceptions about writing instruc-tion. From the original pool, 10 subjects were chosen because they held the most disparate con-ceptions about writing instruction. Five teachers were identified with a strong externally focused perspective in which the teacher's role is to inform students about and evaluate students' production of language forms. Five teachers with an internally focused perspective expressed high agreement with the conception that the student informs the teacher about and self-evaluates the function of a written piece. Data were gathered through interviews with the subjects and a four-month classroom observathe subjects and a four-month classroom observa-tion. Results indicated that significant differences existed between the two groups of teachers in their conceptions of student informancy status, goals, and evaluation during writing instruction. Results also revealed significant differences in the teachers' classroom receives that were positively related to classroom practices that were positively related to differences in conceptions about writing instruction. (Four tables of data are included; 20 references and 4 appendixes containing a conceptions question-naire, teacher interview form, observational guidenaire, teacher interview form, observational guide-lines, and rating scale analysis are attached.) This preliminary report discusses a survey of journalism schools conducted in February 1990 by the Association for Education in Journalism and Mass Communication (ASJMC) seeking data on liaisons between college journalism schools and high schools as well as ideas for ASJMC members seeking new ways to reach prospective journalists among high school students, especially minorities. The report identifies the 66 responding schools (out of 182 surveyed), and the persons who completed the questionnaire, and lists the 49 programs with liaisons and the names of those resource persons. The major focus of the report is the compilation of specific activities and strategies to recruit and retain students. The objective was to identify innovative efforts and an overall sense of what was being done enforts and an overall sense of what was being done and what seemed to be working. Activities are grouped into six areas and are listed in the order of frequency: (1) workshops, conferences, and pro-grams on campus; (2) personal outreach-speeches, visits, press association contact; (3) indirect out-reach-publications, mailings, admissions office data; (4) scholarships and financial incentives; (5) total, (4) scholarships and mancial intentives, (5) follow-through-mentoring, alumni links, student organizations; and (6) miscellaneous opportunities. More responses by additional institutions are invited and will be incorporated into the final report. (The questionnaire and a list of responding schools are attached.) (KEH)

Revision is the heart of the composing process-the means by which ideas emerge and evolve and meanings are clarified. Yet students often see revision not as an opportunity to develop and im-prove a piece of writing but as an indication that they have failed to do it right the first time. Revision, whether done with computers or with pen and paper, will go beyond correction only if teachers emphasize the whole text over its parts. When this happens, students discover the power of writing as a means of shaping ideas and clarifying meanings

rather than as a way of correcting errors or fulfilling a class requirement. Publishing student writings can be a powerful means of motivating revision, as providing students with in-class time for revision and allowing flexible due dates for writing. (Seventeen references are attached.) (RS)

Identifiers—*Contact Literature, ERIC Digests
As English becomes institutionalized in nations
that do not share its Western cultural traditions, the
language broadens. The English produced in new
contexts naturally takes on the flavor of its surroundings, delivering a blend of native and Western
linguistic features, semantic and pragmatic qualities,
literary heritages, and the like. The literature written in these distinctive varieties of English is often
called context literature. Writers of context literacalled contact literature. Writers of contact literature deny that a non-English culture is inexpressible in English and argue that the cultural material in contact literature will stretch or reshape the expressive qualities of English. The rise of contact literature in English provides an opportunity to study the literary effort of international writers and to observe the vital process of language change. This change is of special interest to English teachers and students, or special interest to English teachers and students, since it is their language they are observing, and since the development it undergoes will make it a more sensitive and authentic vehicle for creative expression of consciousness in Western and non-Western cultures. An "authentic dialogue" is presented consisting of two case studies that describe how a process learning teacher became a co-learner with her students through the teaching method of natural learning. Two middle school students, a 13-year-old boy named Josh who dashes off his assignments with whirlwind nonchalance and a fourth-grade girl whirlwind nonchalance and a fourth-grade girl named Holly who is very serious about learning, met with the teacher from 8:15 to 9:30 in the evening over a 2-week period. The model the students were exposed to involved 2 hours, from the rehearsal-for-writing stage to final evaluation for Holly and 1.5 hours for Josh and could easily be adapted to the classroom environment. The boy responded very well to the stimulus of the isolated to the control of the stimulus of the isolated project and the teacher found no specific sponded very well to the stimulus of the isolated tutoring project, and the teacher found no specific areas of the writing process about which the boy needed to know more. Given time and sensitive teachers, the young girl showed the potential to blossom as a writer. (RS)

dent Centered Assessment

Instructors of professional courses such as adverinstructions of professionar courses such as adver-tising copywriting need to exercise caution in as-signing grades to their students' creative work. Some alternative assessment methods can equally emphasize process and product. One successful empnaste process and product. One successful technique is "praiseworthy grading," which shifts the focus from fault-finding to appreciation of positive features. In this approach, the more praiseworthy the student's work, the higher the grade that is awarded. The instructor could also develop multiple criteria, for use with "prescriptions," in which numerical scoring quantifies and objectifies the evaluation of creative work. A second technique is peer evaluation in which students criticize the performance of other students. This format focuses on the learning process and is tailor-made for creative work. The burden on the student to please only the instructor is lifted. Perhaps the optimal opportunity to estimate student progress is the self-assessment method. A contractual self-assessment involves letting students set their own goals, with the instructor facilitating both the learning to which the student aspired and the assessment by students of their learning. The instructor can also create an individualistic sequential criterion format, based on course objectives and outcome expectations. This provides the student with regular feedback on having ac-quired specific skills or content. (Students' comments and three figures providing a sample assessment sheet for each evaluation method are included.) (KEH)

Identifiers-Course Development, Media Courses A practicum was developed to create a high school television production that would develop and improve the broadcast journalism students' critical thinking skills. A 5-minute daily newscast (writ-ten, produced, and telecast by the students) was initiated during a 10-week period. Students had the opportunity to become involved in a variety of the following roles: news director. following roles: news director, producers, timers, floor director, floor manager, studio production crew, remote production crew, news reporters/ancrew, remote production crew, news reporters/an-chors, video engineer, and lighting engineer. Addi-tionally, pre- and postcritical thinking skills tests were administered to the 150 participating students, asking the subjects to identify inferences and to evaluate the meaning in an ambiguous news story. Results of the program implementation and testing revealed improved skills in organizing information; analyzing the content of materials gathered for a news story; synthesizing and ordering facts in an understandable presentation for a high school audience; and evaluating content and visually presenting ideas for a fair, accurate and balanced news report. (Twenty appendixes containing testing data, production criteria, broadcast format, instructional objectives, lesson plans, and class assignments are attached.) (KEH)

Designed to help teachers, grade six through high school, overcome misgivings about computers for

school, overcome misgivings about computers for writing and make the most of the new technology, this book offers answers to an urgent question in language arts: how can computers be woven into the language arts: now can computers be woren into the human fabric of a writing workshop? The book is based on a five-year study of computers for writing in actual school settings and presents what skilled teachers know about using computers to enhance the teaching of writing in the less than perfect conditions of configure descriptors. ditions of ordinary classrooms. The book describes classroom environments called "Writing Lands" classroom environments called "Writing Lands" where computers enhance a process approach to teaching writing and makes the point that what students do with any writing tool depends less on the power of the technology than on the power of the teacher. The book also shows how teachers in the vanguard are using computers to foster collaborative writing and teacher-student dialogue, and ex-plains how these teachers cope with the knotty plains how these teachers cope with the knotty practical questions computers pose in the average school. The book concludes by discussing how to design computer-equipped schools for quality writing instruction, how to choose appropriate hardware and software, and how schoolwide team leadership can support the teaching of writing. The book is organized in five major sections: (1) Portraits of Student Writers; (2) The Key Variable-Good Teaching; (3) Designing WritingLands; (4) Who Rules a WritingLand? and (5) Explorations. An appendix noting contributors to the action research pendix noting contributors to the action research and a bibliography of 113 titles conclude the book.

A practicum provided 10th- grade students in 2
English honors classes with direct instruction in
sentence combining. The goal of the program was to
increase the syntactic complexity of student writing, to have students express more in each sentence. Instruction was approached from different aspects. The students worked with two textbooks on sentence combining. They worked with sentences from the newspaper and a magazine. There were lessons in sentence combining as a means to understanding the style of the two textbook authors. Sentence the style of the two textooox authors. Sentence combining was used as a means to encourage sub-stantial revision of essays. Writing an abstract of the research paper was approached through sentence combining. Exercises utilizing different levels of combining. Exercises utilizing different levels of thinking were also included. According to a pretest and posttest measured by T-unit length, students progressed an average of four years during a 10-week period. The attitudes of the students toward writing generally improved. (Sixteen references and a bibliography are attached. Appendixes include: a letter from the language arts supervisor, a "T.V. Guide" exercise, an essay on sentence com bining strategies keyed to Bloom's learning behaviors, a pretest and posttest, and test results.) (Author/MG)

The mass communications discipline is a creature of sociology and technology. The result has been a hybrid of science and craft and an academic rift that has pitted theory against practice. For a while the theoreticians, through control of the doctoral credentialling process, asserted dominance of the acad-emy, but "demassification of mass media" is shifting the central issues in the discipline away from con cern for the effects of messages and how to manipulate them to concern for the process that creates the message. Recent advances in computer technology have liberated the individual provider, making it have liberated the individual provider, making it possible for more and diverse people to deliver professionally packaged media products. The communications curricula and pedagogy should be revamped to develop the thinking, writing, and design skills that such an individual should have. Clarity of thought, a spirit of inquiry, and a solid command of the written word provide the only context for actualizing those skills, which plays right into the strength of Jesuit education. (RS)

This paper describes a practicum in which a comprehensive daily writing program was implemented to determine the effectiveness of the writing process in improving the self-esteem as well as the reading skills of first-grade students. The target group was 11 first graders who, out of a class of 25 students, had failed the comprehension part of the pre-practi-cum reading test and were evaluated as having low self-esteem. The target students spent 1 hour daily on some aspect of the writing process working with a team of peers to complete their own books. Geta team of peers to complete their own books. Get-ting support and respect from their group, the stu-dents read and wrote their stories over and over again, from prewriting and drafting to editing and "publishing" in student-made books. After the 12-week practicum, students were reteated and re-evaluated. Results revealed improvement in reading comprehension scores. All the students passed the positest, which brought them up to grade level. Results also revealed growth in self-esterm in all but three students, who were learning disabled all but three students, who were learning disabled children. The findings suggest that the writing process could be used in other grade levels to increase reading comprehension. (Twenty references and four appendixes containing the pre/post reading and self-esteem tests and samples of student writing are attached.) (KEH)

The purpose of this practicum was to develop a program to increase high school juniors' and seniors' academic achievement by one grade level, their self-esteem by one level (as measured by the North York Secondary School Self-Concept Inventory), and to increase parent positive responses and interest in the program and its continuation. Exami-nation of 41 Diversified Cooperative Training (DCT) students' cumulative records revealed that 15, or 37%, performed below their ability as proven by comparing the Intelligence Quotient (IQ) of the Test of Cognitive Skills, Stanine scores on the Total Language portion of latest Comprehensive Tests of Basic Skills, and the first semester grade in their English class. Pretest results of self-esteem inventories showed more than half of this group was below average. The problem was addressed by involving the parents of these students and implementing a the parents of these students and implementing a 12-week program of Cooperative Consultation with the DCT students' English teacher and their par-ents. A teacher-made, self-enhancement program was also implemented. Although the objective of having all 15 of the students increase their academic nent level was not achieved, 80% raised their English grade by one level. The desired level of increased self-esteem was not achieved. Parents showed an increase in positive responses and interest in the consultation program, and it was concluded that the program could be used to increase academic achievement. Sufficient time should be allowed for strategies in self-esteem to be effective. (Seven tables of data are included, and 28 references are attached. Appendixes include the communication instrument, questionnaires mailed to parents, and self-enhancement materials for secondary stu-dents and teachers.) (Author/MG)

Strategies
Identifiers—Childrens Writing
To improve reading/writing skills in a target
group of 10 first-grade students, an intensive writing
curriculum was implemented over a period of 10 weeks. The program included numerous strategies to improve beginning skills: using concrete objects for classification; using comic strips to illustrate se-quencing; daily practice on correct posture and

placement of paper for writing; alphabetizing sets of letters; and individual writing conferences. The goal of this project was to reduce the discrepancy be-tween students' demonstrated beginning read-ing/writing skills and expected skills. Success was measured by measuring the results of a posttest against the county's expectations for grade 1 students. The strategies used in this project clearly in-dicated that the students mastered all 6 objectives with at least 80% mastery. The strategies and activities presented in this project may provide teachers additional resources to help pinpoint their students' areas of weakness. The motivation this project gives to teachers is to individualize their instruction. Appendixes include a sample assessment card, a teacher-made criterion-referenced test, and the county's grade 1 formal writing assessment. (Author/MG)

Spelling Errors

A study explored the written compositions of ele-mentary school students (ages 6-14) and the vocab-ulary they use. Compositions were written by a large national sample of over 4,000 children, who were given free rein to write whatever they wanted; thus the study provides status information on the vocabulary that children currently use. The study also explored relationships between vocabulary and the communicativeness of the compositions and between vocabulary and reading comprehension. A major outcome of the study was the compilation of a lexicon of children's written vocabulary. That word list shows huge cultural changes in the vocabulary that children use when compared to word lists (still in common use today) which are 40 to 60 years old. Results also included analyses of token production, type production, type-token relationships, and spelling error production. (Two tables of data and six figures are included, and 107 references are attached. Two appendixes contain a list of the 500 most frequent words, and a list of common misspellED 323 565 CS 212 523

A pilot study explored the disciplinary perspec-tives and instructional practices within English, Foreign Language, and Social Science departments in a midwestern high school to determine the degree of collaboration practised by instructors to provide interconnected cross-cultural education. Data were collected by means of interviews with and classcollected by means of interviews with and classcollected by means of interviews with and class-room observation of eight subjects teaching the fol-lowing disciplines: American Literature, and World Literature, French, German, Spanish, Modern World Civilization, Anthropology, and Sociology. Results revealed that the social studies teachers have taken on the leadership role in promoting cross-cultural education from a global perspective, that the English teachers have not broadened their materials to include literature at the international level, and that the foreign language teachers empha-size language competency and proficiency while at-tributing a secondary role to the teaching of other cultures. Findings suggest that little interdisciplin-ary cooperation exists in the teaching of culture-the main barriers cited by teachers being tight teaching schedules and lack of time. (KEH)

Identifiers-California (South), *Media Education A study investigated high school social science teachers' opinions on including media studies in the curriculum. A 53-question survey instrument was constructed and sent to 302 southern California social science teachers, of whom 159 responded, for a return rate of about 53%. Results indicated that all of the teachers thought it was important to help students develop critical thinking skills. About 94% of the teachers said mass media studies should be of the teachers said mass media studies should be included in high school social science classes. About 86% of the teachers said they felt qualified to teach about the mass media, although only 34% indicated that their college training had helped them to develop such expertise. Television was ranked as the most important mass medium to include in the study of mass media in high school social science classes. Respondents rated the potential effects of mass media messages on people as the most impor-tant element to include in the media curriculum. Results indicated that even though most of the teachers recognized that the social science curricu-lum was already crowded with critical areas that needed to be taught, almost all of them indicated that room should be found for including meaningful instruction about how the mass media operate, how they should operate, what power they have and how they influence lives every day. (Three tables of data are included, and 28 references are attached.) (MG)

Wulfemeyer, K. Tim Mueller, Barbara Commercials in the Classroom: A Content Analysis of "Channel One" Advertisements.

"Channel One" is a 12-minute daily TV news program designed specifically to be broadcast to high schools. A study examined critically the content of "Channel One" commercials to determine the values, themes, formats, and appeals used to pitch products to students, with special emphasis placed on the values used and promoted in the commercials. A coding schema was developed to conduct a content analysis. Results indicated, not surprisingly, that most of the commercials on "Channel One" were aimed at teenagers, emphasized positive aspects about products that teenagers use or focused on issues that teenagers are concerned about, featured young people having fun and enjoying advertised products, included rock music, and lasted 30 seconds. More interesting findings concern what the commercial messages collectively convey. Public service announcements comprised about 15% of the messages, a significantly higher percentage than that on most television stations in the United States. Well over 75% of the characters in the commercials were Caucasian; African-American, Hispanic, or Asian-dominant characters were almost non-exis-Asian-tolinian characters were almost indicases then. Product values seemed to tell students that products are worthy of purchase because they are effective and technologically advanced, rather than unique or ornamental. Personal values expressed founique of offiamental. Personal values expressed to-cused primarily on leisure/pleasure, appearance/ sexuality, and belonging. (Three tables of data are included; 54 references and 4 appendixes are attached.) (SR)

Noting that the feminization of the typical public relations classroom has increased interest in how educators, ear, meet the needs of their female and

educators can meet the needs of their female and minority students, this paper discusses an approach to teaching that integrates concerns for diversity in what is taught, how it is taught, and who is being taught. The paper begins with an explanation of factors that contribute to reluctance to teaching new material with anything but a time-honored method. The paper then argues that the way an individual learns affects what is learned. It concludes that the interactive, seminar process offers the greatest potential for helping students and faculty co-construct their knowledge of complex, multifaceted material. The paper also concludes that this, in turn, should lead to a generation of mangers who will reject any asymmetrical practice that does not value the diversity, the equity, the cooperation and the responsibil-ity that have characterized their education. Forty-three references are attached. (SR)

Identifiers—*Group Selection
At one time or another virtually all public rela-

At one time or another virtually all public relations courses use the group project to facilitate "real world" learning for students. Public relations faculty report forming the groups themselves in one (or a combination) of three ways: basing the choice on class assignments and prior knowledge of the students; leaving the decision up to the students; or leaving it up to the luck of the draw. This paper describes an alternative method for forming studeaths into groups that provides optimum performance potential, alleviates the stress on the professor, and allows students some creative input. It is also far more professional. This method begins early in the semester. Students submit an anonymous resume labeled only with an identification number. The instructor chooses group leaders from the resumes and then the leaders choose their group members from the remaining anonymous resumes. Two years of experience in using this methods has demonstrated that this approach yields more equitable groups and a superior end result. (RS)

Descriptors—Codes of Ethics, Cultural Influences, Ethical Instruction, *Ethics, Unitural Influences, Moral Development, Prosocial Behavior, Public Relations, *Student Attitudes, Suryeys, Under-Relations, *Student Attitudes, Surveys, Under-graduate Students, *Values Identifiers—*Materialism, Money, Study of Values

A study investigated students values to determine the regard in which today's students hold money and material possessions. Questionnaires, eliciting responses to 10 topics organized by a weighted scale, were administered to 150 students in two secscale, were administered to 10 students in two sec-tions of a class in principles of public relations. Re-sults revealed that money had minimal importance for students. Of the 10 values considered, money was ranked seventh-just ahead of sex. Health, rela-tionships, and a career were most important to the students who participated in the study. Children, ranked dead last, were the least important. Findings challenge common beliefs about the importance of money to students and suggest that although stu-dents appear to be opportunistic and money-ori-ented in their actions, they are not in their beliefs. However, experience indicates that money is much more important to students than is indicated in this study, and if students' actions are different from their beliefs, then this dual standard may imply the triumph of the marketing culture in which the sale, the achievement, the winning, is everything. Fi-nally, it is not inconsistent for the students to consider money to be unimportant while acting as if it were everything. They are operating within a frac-

tured value structure, in which the operational and idealized values are compartmentalized. (Four fig-ures of data are included; 16 references and 1 appencontaining the questionnaire are attached.)

Identifiers—*Small Group Communication, Speech Communication Education, Wallace (Karl R)

Values can and should be a part of small group communication instruction. Discourse is value laden and to understand the communication process, the role of values must be understood. Many students come to the classroom not understanding values, and not being aware of the role of values in decision-making. Their lack of understanding re-quires that teachers first teach about values, what a value is, the nature of value hierarchies, and how values operate in small group discourse. K. R. Wallace's four habits associated with the demo-cratic ethic have been identified as important values cratic entic have open identified as important values to teach. They are: (1) the habit of search (finding information that both confirms and questions an individual's own premise); (2) the habit of justice (presenting all the information openly and fairly); (3) the habit of preferring public to private motivation; and (4) the habit of respect for dissent. The habit of dissent is particularly important for the small group participant. Walter Fisher's five ques-tions for rhetorical communication have been identified as helpful in identifying value issues in decisions. Other approaches will be equally useful in teaching students to consider values in group com-munication; most important is the willingness to teach that which has been so long neglected. Without significantly altering the nature of the course, one can use a variety of strategies to enhance the

understanding of values, both public and private, in small group communication. (Thirty-two endnotes are included.) (SR)

This naper examines the nature of student engage.

This paper examines the nature of student engage-ment in the instructional activities of eighth- and ninth-grade English classes and draws general con-clusions applicable to instruction at all levels. It fo-cuses on the teacher's pivotal role, showing that cuses on the teacher's pivotal fole, aboving that certain discourse practices elicit substantive (rather than procedural) student engagement, with teachers taking students seriously, and acknowledging and building on what they say. These practices involve:

(1) asking authentic questions (which open the floor other than the content of to what students have to say); (2) engaging in uptake (building on what students have said); and (3) high-level evaluation (which certifies new turns the discussion occasioned by student answers). By contrast, the teacher-student interaction called "recitation" (in which the teacher asks a series of preplanned questions, initiates all the topics, and rarely interacts with the substance of students' anrarely interacts with the substance of students and procedurally engaging. Using examples from a study of eighth- and nith-grade English, the paper examines substantively engaging instruction, showing how students become most profitably engaged and learn most in classrooms characterized by extensive interaction between students and teacher. The paper is divided into the following sections: "Pro dural versus Substantive Engagement"; "Quality of Instructional Discourse as an Indicator of Student Engagement" (an examination and discussion of three samples of classroom talk); "Implications for Writing"; "Student Engagement and Literature Achievement"; and a conclusion. Twenty-four ref-erences are attached. (SR)

Identifiers—Communication Behavior, *Communication Competencies, *Micronesia

A study examined the means of and correlations between perceptions of willingness to communicate, communication competence, communication apcommunication competence, communication apprehension, and introversion of college students in the United States and Micronesia. Subjects were 159 undergraduate students enrolled in 19 classes at the Community College of Micronesia on the island of Pohnpei. All of the measures employed were self-report scales: Willingness to Communicate, Self-Perceived Communication Competence, Communication Apprehension, and Introversion. The focus of the study was on the differences between data generated in the United States and Microne-sian data. Comparisons indicated significant differ-ences between orientation of students in the two cultures. Micronesian students perceived themselves as more introverted and apprehensive but less competent and willing to communicate than American students. Additional findings indicated that whereas U.S. studies have found no sex differences between male and female subjects, significant sex differences exist between male and female students in Micronesia. Results are interpreted as having both cultural and language bases. (Three tables of data are included, and 22 references are attached.)

*Talvairies Visionies *Television Viewing Identifiers—Media Analysis, Music Videos, *Popu-

A study questions recent findings that adolescents spend more time viewing television than listening to music. It is argued that questions about what constitutes music listening and music media, about ade-quate scales to measure time spent with television and music media, and the age range from which recent samples have been drawn, have led researchers to overestimate adolescent television viewing and underestimate music listening. Data were drawn from a pilot study conducted with 314 ninth and 351 eleventh graders from three high schools. The survey differed from previous assessments of music by (1) measuring amounts of listening in smaller increments; (2) differentiating between music listening via radio and other media; and (3) sensi-tizing respondents to music listening as a background activity. Results indicated that adolescents were found to spend significantly more time listening to music than viewing television. Results concerned with: (1) the relationship between ado-lescent sociability and time spent with television and music media; and (2) gender, age or racial/ethnic differences in amount of, and reasons for using television and music media are also presented Taken together, these results point to the centrality of music media in adolescence. Future research needs to consider differences within audio media as well as between audio media and audio-only media. (Eight tables of data are included and 28 references are attached.) (Author/MG)

Although grade repetition is prevalent in U.S. schools, recent research indicates that this practice schools, recent research indicates that this practice does not work as intended to ensure basic skills mastery, avoid failure at higher grade levels, or lower dropout rates. This report, based on "Flunking Grades: Research and Policies on Retention" (London: Falmer, 1989), edited by Lorrie A. Shepard and Mary Lee Smith, aummarizes numerous ard and Mary Lee Smith, summarizes numerous ard and wary tee Smith, summarizes numerous questions about grade retention and the research evidence. About 5 to 7 percent of public school children are retained in the U.S. annually. By ninth grade, approximately 50 percent of all U.S. students have flunked at least one grade or are no longer in check Executive teer the descriptions. A 1090 school. Even kindergartners are flunking. A 1989 research synthesis of 63 controlled studies showed that when retained children went on to the next grade, they actually performed more poorly on average than if they had gone on without repeating. Retained students also do more poorly than matched controls on followup measures of social adjustment, attitude toward school, behavioral outcomes, and attendance. Student retention is also associated with an increased probability of dropping out. Alternatives to grade retention include reme-dial help, before- and after-school programs, sum-mer school, instructional aides working with target children in the regular classroom, and no-cost peer tutoring. Each of these solutions results in more positive achievement gains for participating chil-dren than for controls. Better data are needed to determine the costs of retention and the actual numbers of students involved. Summarized information about costs, accelerated schools, and kindergarten retention is highlighted in boxes. (Seven references)

The educational philosophy, goals, and graduate program of the Department of Educational Leadership at Wright State University are described in this paper. The department offers two masters degrees, called respectively the Teacher Leader degree and the Educational Leadership degree. Both degrees are composed of seven developmental strands: professional development; ways of knowing; founda-tions; psycho-accial dimensions of education; curriculum and instruction; school organization; and research. A second master's degree designed to follow and complement the two existing degrees is also described, as is the Educational Specialist De-gree, a cooperative effort between Wright State Uni-versity and the University of Dayton. Two figures illustrate the program models. (LMI)

Leadership, *Job Satisfaction, *Participation, • Principals

This report summarizes a study investigating the relationship between the extent of elementary school principals' participation in the budgeting process and their job satisfaction. The study also explored the difference between principals' actual and desired role in budgeting. Two studies were conducted, one in 1978 and one in 1988, and were compared to determine differences in principals' in-volvement and perceptions of their budgeting role and the relationships to job satisfaction. The study created a questionnaire to measure involvement factors and used another instrument, the Minnesota Satisfaction Questionnaire, to measure dimensions of general job satisfaction. The 1978 study had a of general job satisfaction. The 1978 study had a response rate of 72 percent, and the 1988 study's response rate was 55 percent. In both studies, the principals were asked four questions to determine their budgetary involvement and influence with supervisors. In the 1978 study, principals who felt they could easily get their ideas across for items affecting their schools showed significantly higher scores in the general satisfaction dimension than did their less influential counterparts. In the 1988 study. their less influential counterparts. In the 1988 study, there was no significant difference in the job satis-faction of those involved and those not involved. This difference may be attributable to changes in the principal's role; perhaps participation in budgeting is not viewed by central office administrators as the instructional leader's job. Also, the newer principals would not be less satisfied if participation was never offered to them. (MLH)

ysis, *Systems Approach Identifiers—Hierarchical Analysis

Systems theory and its application to educational administration are discussed in this paper. An extensive literature review concludes that systems tensive literature review concludes that systems analyses are based on the concept of interdependence and on the assumption that the whole may be greater than the sum of its parts. Applications to educational administration include model building, hypothesis testing, practical everyday decision making, effective evaluation, and improved communication. The view of educational administration as a social process within a social system and schools as open social systems facilitates the development of a framework to understand organizational roles and relationships. The conclusion is that thinking in a systems mode is an effective method for everyday, practical administrative decision making. (15 references) (LMI)

Student Development, Student Improvement,
'Student Leadership. *Student Leadership Identifiers—Portland School District OR

Designed for persons in schools or community agencies who wish to implement a program for at-risk youth that emphasizes the development of leadership skills, this replication guide represents 2 years of program refinement. While the strategies described here can be managed by either a school or described here can be managed by either a school or agency, this guide was written from the perspective of an outside agency as the program operator. Underlying the Leadership program being operated in Portland, Oregon, by the Southeast Youth Service Center (in partnership with the Portland Public Schools), is the belief that programs for at-risk youth need to do more than eliminate unacceptable behavior; they need to take youth to a level of self-confidence that results in a sense of personal power and control. While this document-containing three student profiles a project description, and a three student profiles, a project description, and a discussion of replication issues with checklists-can be a guide for a very effective and successful effort, be a guide for a very effective and successful effort, the Leadership program should not be considered a "quick fix" for the problems of at-risk youth. Because the problems faced by youth are often deep-seated and complex, the solutions are also complex and intensive. Publicity, forms, learning resources, and a group challenge course are detailed in the appendices. (KM)

Teacher Characteristics Identifiers—*Illinois (Chicago)

The effect of leadership styles of school adminis-trators on teacher evaluations of their job perfor-mances is examined in this paper. A secondary focus is a comparison of teacher characteristics and their effects on administrator evaluation. A principal evaluation survey was administered to 120 Chi-cago public and nonpublic school teachers, counselors, coordinators, and assistant principals with ratings assigned on the basis of four leadership styles: Laissez Faire, Democratic, Dictatorial, and styles: Laissez Faire, Democratic, Dictatorial, and Transactional. Findings indicate that teacher experience or principals' administrative level had no sig-nificant effects on evaluation. Overall, the Transactional and Democratic leadership styles as well as the type of school (private and preschool) had the most positive influence on the evaluation of principals' job performance. The results suggest that principals, particularly those who employ the Laisire and Dictatorial styles, reexamine their approaches to school management. Five statistical tables and an extensive bibliography are included. (LMI)

Programs
Identifiers—*Utah
The evaluation of 24 elementary schools in 11
Utah school districts using extended day or extended year programs is the purpose of this summary report. Specific research goals are the identification of program characteristics; program implications for education in general, personnel, families, communities, and the physical structure; level of participant acceptance; and cost effectiveness. Each district is treated as a case study. Methodology is based on cost analysis, a comparison of achievement test scores, program observations, a survey of teacher attitudes and experiences, a patron telephone survey, and interviews with partici-pants at all levels. Findings of each data collection method for both programs are summarized, recommendations are offered, and graphs and tables illus-trate the data analysis. Appendices include copies of the survey instruments, a list of steering committee members, the school sample, sample school calen-dars, and teacher and patron comments. (LMI)

Property tax relief for the Illinois taxpayer, predicated on full state funding of elementary education,

is advocated in this paper. A consequence of full state funding is the reduction of property taxes for education and creation of an educational income tax. Effects at the elementary level are equity and adequacy; at the secondary level, school and proadequacy; at the secondary level, school and pro-gram choice. The discussion places the Illinois tax burden in context, briefly explores the economics of affected educational benefits, and concludes with the concept of full state funding of elementary edu-cation and subsidization of secondary education in Illinois public schools. Tables of tax data are in-cluded. (10 references) (Author/LMI)

Secondary school curriculum is evaluated in this study designed to assess the degree of accordance between curriculum designers' intentions and perceptions of those intentions by curriculum implementors (administrators, supervisors, and teachers). A survey instrument was composed of nine sections that addressed learning objectives, classroom activities, assessment, staff, facilities and equipment, textbooks, teachers' manual, process of curriculum development, and curriculum content. Data were also collected on implementor demographics and opinions. Five conceptual factors-student personality development, classroom demographics, student-centered curriculum, integration of social and cultural heritage, and development of thinking abilicuttural neritage, and development of influsing aoni-ties- and eight demographic variables were used as independent variables. A questionnaire was admin-istered to 843 teachers, 99 superintendents, 75 ad-ministrators, 100 parents, 531 secondary students, 254 grade 3 students, and 110 secondary school graduates. Teacher and administrator responses were more similar than supervisor responses, which indicated a greater diversity among administrator characteristics. Descriptive statistics indicated an overall high degree of agreement, with the exception of items related to extracurricular development, affective domain, resource allocation, staff appointment, and staff participation. Recommendations are made to address the issues of: (1) improvement of Islamic relations; (2) collaboration between arts and sciences; (3) comparative studies of school districts, and (4) inservice teacher training programs. Tables and figures, appendices that include the survey instrument and statistical findings, and an extensive bibliography are included. (LMI)

Identifiers-*University of Michigan Ann Arbor It is a common public perception that schools are failing to perform their fundamental mission; in the public eye, the responsibility for this failure lies with the administrators leading the schools. Consequently, there has been a litany of criticisms of the programs that prepare administrators, particularly programs located in major research universities. This document presents a detailed analysis of: (1) the specific criticisms directed at administrators; (2) the attitudes, knowledge, and skills required to meet these criticisms; and (3) the instructional strategies, principles, and structures most likely to produce them. Problem-Centered Instruction (PCI) provides an alternative approach to administrator selection and training that focuses on the collaborative soluand training that rocuses on the commontwe sout-tion to practical field problems. Key concepts of this instructional method include recruiting students in a cohort group that will proceed though training as a unit; focusing instruction in each subject area on the implications of that content for the thematic problem; and using computer conferencing for con-tinuing collaborative problem-solving, for class dis-cussions of substantive issues, and for written class assignments. In April 1989, the University of Michigan field tested an educational administrator training program based on the PCI approach; currently, a cohort group of 19 has been admitted into the experimental program. The Radical Reform of Administrative Policies in New South Wales School Education: Practical and Theoretical Implications

Pub Date—Apr 90 Note—26p.; Paper presented at the Annual Meeting of the American Educational Research Asso-ciation (Boston, MA, April 16-20, 1990). Pub Type— Speeches/Meeting Papers (150) EDRS Price - MP01 Plus Postage. PC Not AvailDescriptors—Change Strategies, *Decentraliza-tion, *Educational Administration, *Educational Change, *Educational Policy, Elementary Sec-ondary Education, Foreign Countries, *Policy Formation, Politics of Education Identifiers—*Australia (New South Wales), Educa-

tional Restructuring The government of New South Wales (Australia) is attempting to enhance the quality of public educa-tion by radically altering management structures and practices. Despite some popular objections, po-litical intervention was mandated and warranted due to excessive centralization in administrative policy making, curriculum development, and re-source allocation processes. After discussing the causal context and the New South Wales Government's reform agenda, this paper summarizes the work, findings, and recommendations of a contracted management review from a participant-ob-server's viewpoint and suggests likely effects in the largest centralized education bureaucracy of the Western world. The final section relates this administrative policy-making case study to some recent educational administration theories. It is suggested that key participants' actions might be interpreted as philosophy-in-action and as personal searches for meaning and immortality through structure, and that the effects of a restructuring strategy might be analogous to genetic engineering. Clearly, a practi-cal theory of educational leadership will have to accommodate existential, social, and material realities and provide a holistic explanation of intercon-nected philosophical, strategic, political, cultural, managerial, and evaluative activities. In 1985, in response to both first- and second-wave reform reports criticizing the nation's schools for a lack of rigor in their instructional programs, the achievement formula research project, grams, the achievement formula research project, "Techniques of Responsive Intervention to Validate Effective Teaching" (TRIVET), was developed. Be-tween 1985 and 1988, the project was piloted in three northeastern Ohio school districts and in-volved 168 students. During the 1988-89 academic year, it was further piloted in the Cleveland Public School District, where it involved 1,460 students. The operation of this formula enables districts to formatively monitor, summatively evaluate, and reliably predict student achievement levels as the most significant outcome of the reform effort. As an administrative training project, TRIVET has been designed to provide the building principal or other instructional leader with the necessary knowledge, processes, and skills to more effectively diagnose classroom teaching. The TRIVET program, divided into eight separate modules of instruction based on teacher effectiveness research, was designed to oc-cur during 72 clock hours of instructional time. Each module consists of direct instruction, application with actual teaching segments, and feedback by instructors. Participation in the achievement fordent achievement is the responsibility of the entire district and the principal objective of its collective resources. (KM) mula project demonstrates a philosophy that stu-

A 1989 survey of Georgia's elementary and secondary school principals was undertaken to discover the relative importance of their schools' administrative needs according to five organizational criteria: (1) needs of schools statewide; (2) comparison of elementary and secondary school needs; (3) needs of schools by system size and socioeconomic status; (4) needs of schools by system cost per pupil; and (5) needs of schools by system Regional Educational Service Agency (RESA). Findings were based on a 70 percent response from a ings were based on a 70 percent response from a one-third sample of Georgia's elementary and secondary school principals to a 61-item survey. Of the ondary school principals to a b-1-tem survey. Of the 10 task areas ranked highest by principals, 9 were primarily "management" rather than "instruc-tional" needs. Principals portrayed their preoccupa-tion with three broad-impact issues: (1) people-centered task areas, including stress man-agement, staff morale, conflict management, and implementing change; (2) external relations task areas, including school-societal problems and school-community relations; and (3) technical-leadership task areas, including legal considerations, computers and data processing, time management, strategic planning, and program evaluation. With few exceptions, elementary and secondary princi-pals selected the same task areas as their highest needs. With the important exception of small school systems, most of the schools had very similar high level administrative needs. Concerning needs of schools by system per pupil cost, the selections of the six groups resembled those of the statewide group. Considering regional comparisons, the set of schools within each RESA has a unique needs profile. Numerous tables and two appendices summarizing results are included. (MLH)

The structure and function of the California Educational Research Cooperative (CERC), a collaborative action research organization designed to link retive action research organization designed to link research to educational practice, is described in this paper. A brief history of school-university partnerships and a review of the status of these partnerships is provided, followed by a description of the CERC research cycle, which is based on purposeful agenda setting, and of the CERC governance structure, which is based on a participative decision making forms. forum. Based on the success of CERC so far, it is concluded that factors for success of school-univer-sity partnerships, should include: (1) shared professional resources and services; (2) relevant research programs with practical significance; (3) professional collegiality and training; (4) school improvesional collegianty and training; (4) school improve-ment objectives; (5) quarterly reports and assessments; and (6) public support. Five figures present information on CERC financial and organi-zational aspects and on school-university partner-ship characteristics. (21 references) (LMI)

Trends in the number of minorities and women certified and/or employed as secondary and assistant secondary principals in South Carolina are examined in this report. Analysis of state computer files of population data from 1978 to 1988 indicates that the authors of females certified and amplicates. that the number of females certified and employed as secondary and assistant principals has increased since 1978, and that fewer minorities, especially black males, are entering educational leadership po-sitions. Recommendations are made for the development and implementation of financial incentive recruitment policies, and for collaborative efforts between education and the private sector to identify and support minorities and women in school administrative positions. However, a fundamental change must first be made in the perception of education as a popular political issue. The findings call for the development and implementation of a master plan for educational improvement, with a focus on increasing administrator and teacher rewards to attract highly qualified women and minority teachers and administrators. Seven statistical tables are included. (17 references) (LMI)

Education in the United States is currently in the midst of a crisis of purpose, Without a mission, the

midst of a crisis of purpose. Without a mission, the schools can operate both comprehensively and efficiently, but they cannot be effective. Because the schools cannot clarify what it is they are supposed schools cannot clarify what it is they are supposed to do, they can be asked to do whatever anyone wants them to do. With a clear mission, the schools can sort through requests and accept only those consistent with their mission. The schools' ultimate consistent with their mission. The schools ultimate mission is simply to provide all children with academic learning. This does not mean the schools should not feed and transport students, provide athletic opportunities and health instruction, and teach students how to drive. It does mean that schools should do these things in the context of their essential academic mission. Perhaps the most significant way of accomplishing this is to ensure that the curriculum developers and lead teachers have a combination of strong academic background and ability to make sense of academic disciplines for young peo-ple. In addition, educational leaders must be true leaders and not just managers; complex organiza-tions seldom have the capacity to abandon func-tions, but educational leaders must get school systems to eliminate aspects of yesterday to make room for tomorrow. Countries, Interpersonal Relationship, *Leader-ship, Models, Research Problems, *Theory Practice Relationship Identifiers—*Australia, *Habermas (Jurgen), Social

This paper contributes to an emerging rational reconstruction of the concept of educational leadership in a critical theory (or method) of education. This partly accomplished task is extended by appropristing and analyzing the social philosophy of Jur-gen Habermas. In particular, the theory of communicative action and the notion of the ideal speech situation is explored for relevance to the reconstruction of educational leadership. The prevailing bureaucratic and individualistic concept of leadership is increasingly inappropriate in educa-tional organizations if democracy is to be advanced. Functionalist leadership research assumes that leaders and followers operate within an uncontested and real social structure. The leader's key task, then, is real social structure. The leader's key task, then, is to increase productivity capability within a given structure. Contingency leadership theories, Blake and Mouton's (1975) managerial grid, and House's (1971) pathological theory of leadership are flawed because the assumptions of orthodox social science are inadequate. Actually, language forms and communication structures in an organization shape the leadership form deemed appropriate. Habermas posits two basic forms of social action: labor or purposive rational action (concerned with technical efficiency) and interaction or communicative action. In the ideal speech situation, all participants have an equal chance to employ any or all language functions. In "pure" communicative action, individuals participate in or take up discourse without hidden intentions or motives and have equal opportunities to question the validity of another's argument. This kind of communication structure should result in greater understanding, less distortion of meani and increased learning. (27 references) (MLH)

The findings of a pilot study of *Pennsylvania*s*

Identifiers—*Pennsylvania

The findings of a pilot study of Pennsylvania's
School Performance Incentive (SPI) program are
presented in this report. School level incentive policies as elements of the entrepreneurial context of
educational restructuring and an organizational
model for an incentive-based merit system are also
discussed. The study examines the effect of SPI on
school outcome measures upon which monetary rewards were contingent and on school personnel behavior. Test performance data from 2,584 schools
and dropout rates of I.132 schools that qualified and and dropout rates of 1,132 schools that qualified and did not qualify for rewards were analyzed by year. Personal and telephone interviews with teachers, principals, and superintendents in 13 elementary and secondary schools were also conducted. Analysis of performance data found no evidence of an incentive effect on school performance measures and/or on personnel behavior. Interviews indicated that SPI outcomes may be due in part to insufficient information dissemination and communication and to attitudes of disinterest and hostility. It is concluded that two of the three state program goals have been achieved: annual cash rewards for significant educational improvement; and improved collegial participation, but that the third goal, further school performance improvement, has not been achieved. Comprehensive research, organization, and favorable political attitudes are needed for successful reform initiation. An attached article de-scribes an incentive-based merit system model. Tables and a list of 18 references are included. (LMI)

This report examines how the educational reform

This report examines how the educational reform movement has affected supervisors. In fall 1989, 46 educational administration graduate students com-pleted interviews with 92 elementary, middle, and of New Jersey. Over 360 hours of taped responses to the structured interviews were transcribed, analyzed, and submitted for further review. The study summarized in this report is based on data from visits II and IV. Central to visit IV was the question, "How are you faring?" A review of the response to change literature and a preliminary reading of re-spondents' taped interviews led researchers to exspondents' taped interviews sed researchers to ex-pand the original question to include a series of related questions concerning supervisors' accep-tance or adjustment to mandated reforms at the dis-trict level. Participants fell into one of four quadrants. Quadrant I respondents (17 percent) quadrants. Quadrant I respondents (17 percent) stated that they were faring well and initiating collaborative efforts to meet or exceed mandated reforms. Quadrant II supervisors (35 percent) projected an accommodating attitude; they felt prepared for testing and reporting changes, but less prepared to address changes in instructional programs or teaching behaviors. Quadrant III (41 percent) were frustrated by new paperwork, were less interactive with reform issues, and felt unprepared to meet requirements. Quadrant IV participants (7 percent) were either unoncerned or unaware of the percent) were either unconcerned or unaware of th changes required by state legislation and spoke of retirement plans. The study suggests that New Jer-sey school supervisors are not faring as well as they could be. Four tables are appended. (16 references)

Three dimensions of education-development of knowledge, training of mental abilities, and develcan be seen that the seen that tion is that knowledge development should be based on cultural knowledge and should stress student ef-fort over whatever interests the child already happens to have. Mental discipline, or learning how to complete responsibility, is the central premise of the training of mental ability. The first two dimensions contribute to character development, which transmits cultural and moral values through discipline. Education is based on the premise that knowledge does not give rise to a culture's character, but rather the character of a culture gives rise to its knowledge and direction. A conclusion is that failure to develop character and morality through education fails the fundamental premise of education-the preparation of the young to inherit and strengthen their society.

The effectiveness of a state-mandated set of at-risk criteria to predict which students are likely to become dropouts is evaluated in this study of the Austin Independent School District (AISD). De-scriptions of the district information delivery system, state criteria, and criteria operationalization are provided. Discriminant function analysis indiare province. Discriminant indiction analysis indi-cates that state criteria correctly predicted 40 per-cent of the dropouts. Most of the differences between students who left school and those who stayed were not explained by the predictor vari-ables. Categories developed from the state criteria were used to calculate a dropout risk rate, and it was found that age (i.e., the status of being 2 or more years older than the average for the grade level) was a common factor in all of the six highest risk categories identified, which consisted of age alone plus age in combination with five other state predictors. However, these combinations identified students with a dropout risk rate of less than 50 percent. Stepwise regression analysis identified three of the four state criteria as statistically meaningful: over-age; failing courses; and being below grade over-age; failing courses; and being below grade level. Recommendations are made for an expanded and more focused list of criteria, interdistrict re-search collaboration, and cohort analysis before the ninth grade. Tables and figures illustrate the study findings. (7 references) (LMI)

Identifiers-*Austin Independent School District

In the 1988-89 school year, the Austin (Texas) Independent School District's Office of Research and Evaluation undertook a new dropout research project. Part of this initiative, termed Project GRAD, attempted to develop a statistical equation by which one could predict which students were likely to drop out. If reliable predictive information likely to drop out. It remains predictive miormation could be developed, district and community resources could be more effectively targeted toward interventions with a more likely payoff. Study data were drawn from two sources: (1) AISD's longitudinal dropout file; and (2) other centrally maintained district data files accessed to obtain student information such as achievement test scores, demo-graphic data, and history of compensatory education service. To develop a dropout prevention equation, a series of discriminant function and step-wise regression analyses were performed, using a cohort of first-time ninth graders for 1983-84. After completing 15 analyses using numerous predictor variables, researchers decided to run separate analy-ses by ethic group. The results showed a 100 are ses by ethnic group. The results showed a 100 per-cent prediction for American Indian students; an 89.5 percent prediction for Asian student drop 89.5 percent prediction for Asian student dropouts and a 100 percent prediction for stay-ins; and 67.5, 71.0, and 79.4 percent dropout predictions for White, Black, and Hispanic students, respectively. The study suggests that ethnicity is an extremely important predictive factor. Study limitations are discussed, and detailed information concerning the 16 analysis is appended. (3 references) (MLH)

Identifiers—"New York
A review and assessment of states' reform actions, measurement techniques, and the relevance of the reforms for New York State are addressed in this collection of papers from a working seminar on the purpose of schooling and the means of producing higher levels of achievement. The first paper, "Education Reform in the State: A Comparative View and Identification of the Issues," by Frances Kemmerer and Alan Wagner, presents an overview of state education reform actions, with a focus on financing. A discussion of proposals that tend to be state education reform actions, with a focus on financing. A discussion of proposals that tend to be favored by states concludes that low cost and high visibility actions are not likely to fulfill expectations. An appendix outlines state educational reform initiatives alphabetically by state and a list of references is included. "The Role of Testing in American School Reform," by Edward Kelly, discusses limitations of testing in school reform and offers alternative measurement techniques. Forty-one end notes are appended. "A History of School Reform in New York State: Implications for Today's Policy Makers," by Gail Kelly and Maxine Seller, identifies characteristics of successful reform initiatives, ers," by Gail Kelly and Maxine Seller, identifies characteristics of successful reform initiatives, which include clearly defined goals, strong leadership, and adequate financing. A list of 48 end notes concludes the paper. A preface by Robert H. Koff introduces the papers and briefly summarizes the seminar discussion, noting that participants identified conflict between professional autonomy and state mandates as the primary barrier to reform and suggested specific areas in which changes must be made if improvements in New York's schools are to be realized. The findings of a recent Economic Policy Institute report that asserts that U.S. schools are financially undernourished compared to other nations is
critiqued in this paper. The argument is made that
not only is there no systematic relationship between
increased spending on education and academic performance, but also that increased spending is likely
to cause economic decline. Spending more on obsolete, inefficient schools and colleges will waste reourcase and weaken the U.S. economy. lete, inefficient schools and colleges will waste re-sources and weaken the U.S. economy. sources and weaken the U.S. economy. Recommendations are made for the financing of restructuring, which include changes in resource allocation and investment in new technologies. To double educational productivity of U.S. investments in education and training by the year 2001, the suggestion is made that a minimum of 1 percent of educational institutional gross budgets be devoted to technological innovation (e.g., research, develop-ment, and technology). Dilemmas Presented by State Agency Takeovers of Local School Districts.

Pub Date—Apr 90 Note—13p.; Paper presented at the Annual Meet-ing of the American Educational Research Asso-

ciation (Boston, MA, April 16-20, 1990) Pub Type— Speeches/Meeting Papers (150) EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Accountability, Educational Improvement, Elementary Secondary Education, *Government Role, *Politics of Education, State Action, *State Departments of Education, *State School District Relationship, *Technical Assist-

During the 1988-89 school year, two local school districts were placed into "Phase III" of the Kentucky Educational Improvement Act (1978), a category of state receivership in which much local decision-making power was transferred to Kentucky Department of Education officials. When state education department intervention occurs, major issues arise concerning policy and political problems; technical, financial, and legal concerns; and personnel matters. A major policy-political problem pertains to the state agency's stance-a "swat team" model may show some immediate. "wat team" model may show some immediate gains, but a "carrot and stick" stance may produce better long-term results. The Kentucky state agency adopted a helping role as advisor, approver, and provider of technical assistance. Another policy-po-litical consideration is the degree of intertrention in litical consideration is the degree of intervention in the district's daily operations. Technical issues in-clude establishing baseline data measuring progress, reporting mechanisms, and team composition. Financial issues involve assignment of fiscal responsibility and resources available to support the intervention process. Legal issues range from determining state intervention authority to personal lia-bility problems. Perhaps the largest dilemma is the extent of state agency willingness and ability to address the issues of educational accountability and local control regarding children's interests. State education agencies must face the issues, resolve the dilemmas, and demand accountability to produce effective schools. Recommended intervention steps are provided. (10 references) (MLH)

Teacher Salaries, Unions Identifiers-*Australia

Decentralization efforts in Australia after the publishing of the "Better Schools" report in 1987 are described in this paper. An overview of the implementation process concludes that the transition is halfway completed. However, the process has en-countered strong resistance. Authority to determine the means, but not ends, was devolved to states by the federal government. Barriers to implementation include teacher union opposition, different defini-tions of school autonomy, the role of principals, and the politicization of education. A paradox is that the purpose of restructuring is effective resource utiliza-tion by schools, yet the inability to do so threatens ementation. A conclusion is that restructuring will be achieved, but must overcome the cultural, historical tradition of central management and the appeal of expedient central government action for decisive problem solving. Recommendations are made for outcome-based criteria for evaluating success and presenting restructuring as a means professional advancement. (9 references) (LMI)

Collaborative school cultures have been associated with achieving various school reform objectives for both teachers and students. One central dimension of school restructuring is the empowerment of teachers within a school culture that is both shared and technical. Little is known about how such cultures develop and whether or how school administrators can facilitate that process. This report describes results of a study examining administrator practices in 12 Ontario (Canada) schools that had developed highly collaborative professional re-lationships over a 3-year period in the context of school improvement initiatives. The study specifi-cally examined the extent to which these schools had achieved collaborative cultures, the significance of improvement processes, and the strategies used by administrators to develop more collaborative ool cultures. Data were collected by two interviewers during a 2-day visit to each school. A causal network was developed for each school and analyzed to form various matrices (event by time, role by time, etc.). Results showed that school cultures emonstrated relatively extensive collaboration The relationship between strategies initiated by administrators is neither simple nor direct. Admi trators used six broad strategies to influence school cultures, including: strengthening the school cul-ture; employing various bureaucratic mechanisms to stimulate and reinforce cultural change; fostering staff development; communicating directly about cultural norms, values, and beliefs; sharing power and responsibility with others; and using symbols to express cultural values. ment, *Holmes Group, Perrow (Charles)
It is widely assumed that empowerment repre sents the organizational transformation strategy to help schools fulfill a broad array of announced goals, such as academic excellence, economic prosperity, military security, and social equity. This paper di-rects a demystifying light on the rhetoric and rationality of organizational transformation theory as related to educational reform. Inspiration comes from both Charles Perrow and the poet Ralph Waldo Emerson. Demystification occurs when we place the poetical at the heart of transformation and push the "rational instruments of announced goals" to the periphery. Much theory and research focuses more on effective change characteristics than on the character of change. The study of organizational change has evolved across three streams of thought (organization development, strategic management, and organizational transformation) requiring differand organizational transformation) requiring different conceptions of "fit." To fit the OD experience, participants must value shared decision-making. Strategic management participants must value agressive, risk-oriented decision-making. Organizational transformation involves a complete appraisal of the transformation involves a complete appraisal. of the rules and the nature of the game. To fit this experience, participants must value and accept empowerment. Mainstream views of empowerment as a management practice, internal state, and organizational state are unidirectional, static, and manipula tive and fail to support the construct's liberating values. The mainstream logic embedded in "Tomorrow's Schools" relies on several myths and the fit concept while seeking permanent solutions. The search for permanence tends to promote dominant power relations and resource exploitation. Authentic organizational transformation involves the pasnate pursuit of obsolescence. Supervisory Methods, Validity Identifiers—*Washington

A model and instrument based on leadership as social control theory (LASC) to assess leadership qualities of high school principals was developed in this study. The LASC model, based on symbolic interactionist and functionalist paradigms, attempts to explain the process by which leaders reduce con-flicts between individual and organizational expectations through communication of Organization expectations to followers. The model is composed of nine leadership dimensions, which are combinations of three leadership orientations and three motiva-tion styles. A pilot survey of 114 Washington State public high school principals to test the instrument for reliability and validity indicates that principals generally prefer to use positive power styles based on reward combines with a direct personal orienta-tion in communicating with teachers. Recommen-dations are made for application of the LASC model to a study of teachers and qualitative observational research of a variety of school sites. (6 references)

For schools, acquired immune deficiency syndrome (AIDS) initially represented a policy problem requiring legal and public health experts to assess their ability to exclude students or staff interest with the human immune deficiency wime. As fected with the human immuno-deficiency virus. As the crisis over the potential presence of people with AIDS in the schools abated and with the growing recognition that the disease was not confined to perficular risk groups, educators turned toward their pedagogical function. To create classrooms in which children can feel safe to explore and learn about AIDS, drugs, poverty, and homelessness, educators must accept that children live in a world where must accept that children live in a worse where these issues are encountered at an earlier age than most of us would prefer. Providing this type of envi-ronment for children requires the support of teach-ers as curriculum makers capable of responding to their students' immediate concerns regarding AIDS their students' immediate concerns regarding AIDS and related topics while cognizant of the broader bodies of knowledge with which they may be connected. This approach will not work through the imposition of lesson plans from above; instead, administrators must allow adequate time for staff development in which teachers can express their feasultimately, the AIDS curriculum will be more about life than death, more about health than illness, and more about the body politic than the body physical. Findings show that a computerized applicant file has been developed and the programming completed to allow principals to select from qualified candidates the ones they want to review and hire. Online access by principals will be worked out during 1990-91. Many personnel operations are already automated, including payroll/personnel, budget location, job titles, budget status, tracer letters, career ladder information, administrative applicants, personnel transfers, elementary personnel, position codes, Texas Teacher Appraisal System, position codes, Texas Teacher Appraisal System, employee leave, and student and staff directories. Some personnel operations yet to be automated are employees' reasons for leaving, job descriptions, microfilming records, elementary teacher schedules, and employee applications. Personnel administrators see in automation the potential for more efficient staffing, with certain constraints. The size of the mainframe computer seems to be the biggest obstacle to automation, but that problem will be remedied soon. Personnel need to review and revise current procedures to keep pace with changes asso-ciated with the district's movement to site-based management. (MLH)

The concept of the school as community encompasses two distinct relationships: the school/ex-tended community and the internal school community. As social needs and conditions change, so does the school role in the community. Topics covered in this book include benefits of collab tion between the external community and the school, the creation of internal school community, the role of the school board, and leadership. As a new source of social capital, the school as commu-nity offers mutual benefits: an enriched educational system, a coordinated and more efficient social support system, and a community strengthened through collaboration and cooperation. As a model of collective action, the school as community serves as a catalyst for changes at the state and national levels. Fifteen recommendations and two appendi-ces of sample policies are included. (40 references) (LMI)

The comparative effects and outcomes of two be-ginning teacher induction programs-a formal team approach and an informal buddy system-on novice teaching performance and teacher attitudes toward teaching performance and teacher attributes toward teaching are examined in this study. The sample of 26 novice elementary teachers included one male. Fourteen participated in the structured team approach and 12 participated in the buddy system. Findings from interviews, observation, and an atti-tude questionnaire indicate that structured induction programs with clearly designed goals and expectations, formal observation, and feedback are viewed by teachers as more successful in meeting viewed by teachers as more successful in meeting their needs. Participants in the formal model were generally more satisfied with various dimensions of their job. Both groups expressed negative attitude toward salary and resource adequacy and demon-strated less effective postinduction teaching perfor-mances. The recommendation is made for collaboration between state departments of education and universities to provide structured teacher induction programs that emphasize assistance rather than evaluation, and careful selection of the mentor teacher. Two statistical tables and appendices that contain the interview guide and qualitative analysis are included. (21 references) (LMI)

A significant body of research from business and industry has generally confirmed the contribution of participative decision-making to improved organiparticipative ucessor-making to improve organi-zational effectiveness and employee morale. Fol-lowing a literature review, this paper explores the implementation of shared decision-making in the Pittsburgh (Pennsylvania) Public Schools. The con-ceptual framework, assumptions, and operational characteristics of the instructional cabinet are presented. The principal and the instructional teacher leader's roles are reviewed, along with the training methods employed. Since 1981, Pittsburgh has in-vested heavily in staff development to achieve school improvement and cost effective manage-ment. Pittsburgh desired to create a climate where faculty participation resulted in shared responsibility for improved decision-making, increased profes-sional satisfaction, and greater commitment to the sional satisfaction, and greater commitment to the total school community. The instructional cabinet was designed to: (1) improve collegiality among professionals; (2) create a dynamic community of learners; and (3) promote continued school renewal. The administrator assists staff development personnel in providing necessary training for teachers to acquire, practice, and evaluate the skills of cabinet members as the group engages in shared deci-sion-making. Two proposed studies involving instructional cabinet group interactions and the instructional teacher leader are described. If shared decision-making is to lead to greater professional-ism, researchers must carefully document the pro-cess and studies must relate processes to outcomes. (17 references) (MLH)

Hazelwood School District v Kuhlmeier
Student rights to freedom of speech and the legitimate degrees of control available to principals are
discussed in this paper. An overview of pertinent
federal litigation focuses on two landmark cases involving oral and written speech, respectively: Bethel
School District #403 v. Fraser; and Hazelwood
School District v. Kuhlmeier. A conclusion is that
principal effectiveness depends partially on knowledge of community standards of acceptable speech
and on legal awareness. An addendum describes the
Supreme Court decision in June 1990 of Westside
Schools v. Merzens, which provides a new degree of Schools v. Mergens, which provides a new degree of student freedom and imposes a burden of conformity on public schools. (9 references) (LMI)

Mentoring is defined as the process of developing
people in organizations. Successful mentoring occurs when top-level executives teach selected junior persons the rules of the game; provide opportunities for them to demonstrate their skill; challenge them; give them critical performance feedback; and sponsor them into higher level positions. This book, which grew out of a field-based research project (Project Mentor) funded by the Women's Educational Equity Act, was written to guide executives assuming the mentor role. The project explored the assuming the mentor role. The project explored the nature of mentoring from the mentor's perspective. Corporation heads, university presidents, and top-ranking regional government administrators recognized for their ability to identify and promote talent were assembled to discuss the mentoring process and its role in career advancement. One-on interviews, formal reports, and anecdotal records helped executives examine and describe their mentoring techniques. Proteges' also shared their in-sights. Each chapter of the book isolates an important aspect of mentoring. Chapter I examines mentoring benefits for both organization and mentor. Chapters 2 through 4 tackle the issues of selecting proteges, beginning and ending the relationship, structuring a workable mentorship, and mentoring women and minorities. Chapter 6 explains myths, issues and strategies involved in establishing an organizational mentorship program. (MLH)

The efforts of two pilot accelerated schools serving poor and minority students are evaluated in this report. A program goal was to integrate improve-ment at the school and community levels. Section I briefly describes the attitudes and meanings predominant in schools serving poor and minority youth. The focus on the individual, a narrow view of learning, and the hierarchical school structure is attributed to the technological mindset of American education. Section 2 applies the philosophy of John Dewey to create an alternative understanding of schooling as a collective, humanistic process of creating knowledge through practice and reflection. The third section shows how a process of inquiry based on the Deweyan values of participation, communication, reflection, and experimentation can transform school meanings and beliefs. The implementation of the inquiry process in two pilot schools

is described in section 4. The final section discusses behavioral and attitudinal changes and continuing challenges to educational innovation. Extensive ref-erences are included in footnote format. (LMI)

Changes in the overall conditions of children as indicated by income, family structure and back-ground, health, and other measures warrant a reassessment of the delivery of children's services and a reconsideration of the school role. Children's conditions and their implications for educational administrative policy are examined in this paper. The current educational system, based on inadequate single policy solutions that result in underservice and fragmentation, requires a fundamental rethink-ing. Short-term efforts of various states that have reconceptualized the purpose of children's services are briefly described. A crucial long-term goal in-corporates a changed perspective that recognizes the child within the context of the larger social system and views the school as the nexus of institutional networks. From this perspective, the school role changes from deliverer of educational resources to that of broker of multiple resources. (15 references) (LMI)

The needs of those who move from classrooms into administrative offices must be addressed if school systems are to achieve effectiveness. Pres-ented in this paper is a brief description of the ele-ments of an effective school administrator induction program. A justification for administrator induction programs distinct from those of teacher induction programs is that the administrator role differs from that of the classroom teacher. Three components of administrator induction programs are preprogram planning, mentoring, and program evaluation. (LMI)

A study to identify determinants of administrator salaries and school district salary decision-making processes is described in this report. A three-part methodology included a telephone survey of 23 out of 27 administrators, an analysis of formal district salary schedules, and a data analysis of state personnel files. The state records analysis included data from 27 large suburban school districts, which em-ployed 1,866 administrators. Multiple regression analysis was used to test the relationship between administrators' salaries and several independent personal and organizational variables across 11 administrative positions. A conclusion was that salary differentials are not directly a function of administrator experience and advanced degrees. Nonwhites and females were found to receive lower salaries than white males for a majority of the positions. Recommendations were made for salary research that focuses on organizational variables and internal decision-making processes. Three statistical tables and an extensive bibliography are included. A parent involvement policy to improve public relations in a high school is examined in this report. The policy goal was to attract at least one thousand The policy goal was to attract at least one inousand parents, approximately one-half of the parent population, to the school each year for a positive nonathletic experience. Methodology to analyze policy effectiveness involved interviews with staff members and the principal, the policy initiator, and a telephone survey of parents. Sample sizes were not listed. Low cost strategies to increase parent in-volvement were a principal's newsletter, an aca-demic booster club, and parent education. Findings indicate a high level of parent and staff satisfaction with the program; however, teachers were divided on its effect on school effectiveness. The policy was considered to be successful overall, in that 70 percent of the desired number of parents participated, and 94 percent of the visitors surveyed expressed positive views of their experiences. The relationship between class size and scholastic outcomes is addressed in this paper. A literature review focuses on the research of Glass and Smith (1978) and Larkin and Keeves (1984). Contradictory and inconclusive research findings about teacher effectiveness in relation to class size indi-cate that emphasis should be placed on training teachers in instructional strategies most appropriate for a variety of class sizes. A recommendation is that rather than establishing an absolute class size policy, class sizes should be lowered in those sub-jects which require more teacher/pupil interaction and which have high workloads. Overall findings do not support the cost associated with universal class size reduction and indicate that smaller investments in other educational strategies may yield similar or greater achievement gains. Two figures illustrate the research of Glass and Smith, and one table presents student/teacher ratios by state. (22 references)

Withdrawal (Education)
Transferring from one high school to another may be an important alternative to dropping out. While the public school dropout rate is over four times the dropout rate in Catholic schools, the percentages of transfer students reveal a different scenario. With transfer rates nearly three times their drop out rates, the Catholic schools' reported success with holding at-risk students in school may not be as complete as previously believed. To determine whether transfer behavior is an alternative or a precursor to dropping out of school, data were obtained from the High School and Beyond longitudinal study (initiated in 1980 by the Center of Educational Statistics) regarding the first followup in 1982 of the sophomore cohort. The results for both the private and the Catholic sector indicate that females are less likely to drop out or to transfer, blacks are the most prevalent among the transfers, and Hispanics are the most likely to drop out. Among the public school stu-dents, just under 47 percent of the in-school students display above average at-riskness, but 60 percent of the transfer students-and over 82 percent of the dropouts-display students above average at-riskness. A similar scenario exists in the Catholic sector. Transfer students (from either sector) are sed between the extremes of remaining in so and dropping out altogether. (48 references) (KM)

*Systems Approach
The effective implementation of school redesign, based on a social systems approach, is discussed in this paper. A basic assumption is that the interde-pendence of system elements has implications for a complex change process. Seven barriers to redesign and five critical issues for successful redesign strategy are presented. Seven linear steps for successful implementation, with a focus on megachange, are also included. A recommendation is made for the recognition of human capital as the single most critical component in the redesign implementation pro-cess. (15 references) (LMI)

Identifiers-*Thailand

Improving educational quality at the primary level is a major goal of Thailand's sixth 5-year Edu-

cation Development Plan (1987-91). There is a specall commitment to improve quality in rural areas and among economically disadvantaged groups, handicapped children, and linguistic minorities. In-service education is one vehicle for training teachers to meet changing demands wrought by national de-velopment goals, technological advancements, and new societal values. This paper focuses on two exemplary inservice programs since 1980. Specifi-cally, the paper discusses: types of inservice activity since 1980, their effects on closing the gap between urban and rural student performance, the influence of U.S. inservice programs, and the applicability of Thailand's experience to other developing countries. Three criteria frame the discussion: locus of control, instructional delivery mode, and use of a research base. The Improvement of Teaching Effi-ciency of the Primary School Teachers and The Principals' Inservice Program represent major attempts to upgrade teacher and principal compe-tency since 1980. Several conditions influenced program success, including: the use of self-instruc-tional materials, a school-based locus of control, and a collaborative, collegial ambience. Thailand's inservice experience provides lessons for other develop-ing countries regarding the program's reliance on self-instruction, research, and pre-implementation training and its emphasis on the principal's central role in influencing learning climate. An effective inservice program can minimize disparities in teacher competency. (27 references) (MLH)

A recent one-on-one attempt by 17 Brown University students to "shadow" high school pupils for I day disclosed the bewildering complexity of high schools and the difficulties inherent in categorizing or evaluating them. This paper discusses the nature of this complexity. First, most high schools are densely populated work places. This "people den-sity" is exacerbated by a frenetic schedule that allows little time or psychological space for teachers and contributes to feelings of isolation amid the crowd. Second, despite curriculum guides and stan-dardized testing, each teacher is an individual entrepreneur creating his or her own world. Third, schools are synergistic places in which serious changes in one sector influence everything else in the school. A fourth obstacle to evaluating schools is their essential dailiness and the immediacy of the is their essential dailiness and the immediacy of the present moment. Understanding the nature of a par-ticular school's tensions-or a particular classroom's tensions-is essential. Finally, there are variations in times and seasons when visiting schools. Evaluators must acknowledge the rich variety of any school, whatever its size. Schools must be seen whole, and their synergy must be understood. One must go well beyond published statements or school leaders' expressed policies or statistical analyses. Structured interviews must emerge out of a particular school's language and setting. Idiosyncracies must be carefully noted before generalizations and comparisons are attempted. (MLH)

Scheduled during International Literacy Year (1990), this international conference attempted to launch a renewed worldwide initiative to meet the basic learning needs of all children, youth, and adults, and to reverse the recent decline in basic education services observed in many countries. The conference's three basic objectives were: (1) to high-light the importance of basic education and renew commitment to making it universally available; (2) to forge a global consensus on a plan for meeting basic learning needs; and (3) to provide a forum for sharing experiences and research results. The conference pursued these objectives through an inaugural session, followed by a plenary commission to discuss two working documents ('World Declaration on Education for All' and "Framework to Meet Basic Learning Needs"), a drafting committee examining proposed amendments, thematic and il-lustrative roundtables, numerous exhibits, and a closing plenary session that formally adopted the working documents' final texts. In the opening session, all speakers underscored the need to seize new opportunities and advocated massive reduction of military expenditures. Two themes emerged-the urgency of reducing the burden of external debt and the importance of optimizing scarce resources. The plenary commission viewed education as a necessary condition for tackling development problems, improving societies, and maximizing human resource development, Appendices contain the working documents, the framework for action, a low-up statement, a statement of nongovernmental organization involvement, the conference sched-ule, a list of conference participants, and other information. of educational investments in developing countries have produced a persuasive rationale for expanding have produced a persuasive rationale for expanding access to schooling and raising educational attainment levels. Schooling has been associated with such outcomes as the following: (1) rationalistic attitudes conducive to participating in modern production and governance institutions; (2) profound cognitive changes resulting from using written language and adopting new technologies; (3) involvement in the market economy; and (4) lower fertility rates, seed participant practices, and better health rates, good nutritional practices, and better health There are several explanations for schooling's imnere are several explanations for schooling's impact, including those stressing the social organiza-tion of schooling, secular literacy as a cognitive development process, and human capital and social discontinuity theories. These explanations implicate the school curricula, literacy, instructional organization, and the articulation of schooling with the wage economy as some mechanisms through which individuals change and societal benefits occur. The literature reviewed in this paper has been divided into four sections corresponding to different school outcome domains. The first section comprises studies of schooling's modernizing effects on individual attitudes. The second section reviews research on the effects of school-acquired literacy and numeracy on cognition. The third and fourth sections survey research on the relationship between schooling and employment, earnings, productivity, and benefits such as improved health, nutrition, and fertility control. Conclusions and implications are discussed at length. (110 references) (MLH)

Research on the utilization of educational media, or electronic classroom instructional aids, in pri-mary schools in developing countries is reviewed in this paper. Five kinds of hardware-radio, television, computers, videodiscs, and hand-held electronic derices-are compared according to cost and learning effectiveness. A model of learning production is used to define the educational system in terms of its interaction with family and society, and to illustrate the relationships among the components of educa-tional management, which include content, instruc-tional materials, classroom management, physical facilities, and learning technology. Radio was found facilities, and learning technology. Radio was found to be the most cost effective means of improving both scope and quality of instruction. Effectiveness is enhanced if the technologies are used in combination with curriculum development, instructional resources, administrator support, and teacher training. A comparative table, describing seven educational interventions, a diagram of learning production, and an extensive bibliography are included. (IMI) (LMI)

Allocation, Tax Effort Identifiers—*Indiana

Indiana public policy has frozen local property tax levies for public education funding since the early 1970s, which has resulted in an educational system largely supported by state fiscal aid. A statistical analysis of the fiscal equity of Indiana's school operating expenditures for the latest school year preceding the freeze (1972-73) and the latest available ool year (1985-86) is presented in this paper. School operating expenditures for 303 public school districts are analyzed according to two variables: horizontal equity and fiscal neutrality. A conclusion is that despite increased state support, costs paid by local taxing districts have contributed to inequitable school operating expenditures. A relationship exists between taxing district operating expenditures per student and tax rate, between school operating expenditures per pupil and assessed valuation, and between taxing district tax rate and assessed valuation. The recommendation is made for study of public policy on a state-by-state basis. Nine statistical ta-bles are included. (LMI)

A systems design framework for the transformation of education is presented in this paper. A systems approach views education as a system of pendent problems and the design process as one of four parts of organizational inquiry. A framework for educational design is presented, which is composed of three dimensions-focus for change, scope of inquiry, and patterns of interaction. A conclusion is that organizations must learn how to initiate and sustain a comprehensive system design process for creating an effective learning environment. Two figures present models of educational design. (5 references) (LMI)

An examination of the impact of principals' administrative styles on school climate and culture to explain the discrepancy between observed and explain the discrepancy between observed and quantitative analyses in principal evaluations is the purpose of this study. A 3-year study of four second-ary school principals utilized qualitative methodol-ogy (observation and interviews) and quantitative survey analysis. Contradictory findings of the differ-ent methodologies indicate the inadequacy of a sin-gle methodology for evaluation research. A recommendation is made for inclusion of the con-cept of process and recognition of human needs in

a definition of effectiveness. Several factors for effective schools include fit between system and school goals; choice of goals; fit of goals with stu-dent, staff, and parent needs; and goal implementa-tion strategies. The choice of goals and their relatedness to student and teacher needs were found to be critical for principal success in implementing new programs. Six statistical tables and samples from a school profile inventory are included. (24 references) (LMI)

The administration of French immersion program

The administration of French immersion program in an elementary school in Alberta, Canada, by anglophone principal with little or no knowledge of French is examined in this study. Interviews with French is examined in this study. Interviews with eight anglophone elementary school principals found that a lack of knowledge of French was not perceived as a barrier to effective implementation of French immersion programs, although French lan-guage proficiency was viewed as an asset. Essential factors for effective administration of French immersion programs are commitment, understanding of program context, communication, and interdependent relationships. Fifteen implications for prac-tice and eight recommendations for further research are included. Appendices include correspondence and questionnaire samples, and transcript and log-book extracts. Identifiers-*Pennsylvania

A description and analysis of two failed local fi-nance reform efforts in Pennsylvania between 1987 and 1989-a blue ribbon tax reform commission and a state constitutional amendment-are presented in this report. Constraints imposed during the reform design stage and two political "tar pits"-householdbusiness proportion of local taxes, and commuter taxes-interacted to forestall successful adoption. Factors that contributed to the defeat of the reform efforts include inadequate public education; fear of increased personal income taxes; lack of governor increased personal income taxes; lack of governor support; inaccurate and disorganized drafting; and the development of partisan political and business factions. Most significant was the inadequacy of a short-term state commission and a special legislative session for large-scale, structural tax reform. Issues that must be addressed before financial re-form efforts are undertaken are household/business local tax allocation, interdistrict fiscal tensions, and public education. Two statistical tables are included. (7 references) (LMI)

ployment Identifiers—*Indiana

Like the rest of the country, Indiana faces the challenge of preparing an increasingly disadvan-taged youth population for life in the 21st century. Due to a determination to keep property taxes low, the economic downturn of the early 1980s, and a lack of interest in education among politicians and the general public, Indiana has fallen below the national education averages over the past two decades. In an effort to improve Indiana's educational quality, the governor and the General Assembly have made education reform a primary concern since the mid-1980s; however, it is still too early to judge the impact of their effort. To provide policy makers with a summary of relevant information on Indiana education and to establish a foundation for subsections of education and state of the s quent analyses of education in the state, this document sketches a profile of trends in education over the past decade, provides current conditions of education, and details projections in selected areas. Specifically, the eight sections of this report include: (1) schools and school corporations; (2) student enrollment and performance; (3) special programs; (4) the education work force; and (5) fiscal resources. It is concluded that on many indicators of educational investment and performance-overall funding, per-pupil expenditures, teacher salaries, pupil-teacher ratio, graduation standards, test scores, postsecondary participation rates-Indiana has improved over the past decade. However, despite its improvements, Indiana has gained little or no ground in comparison with other states. While Indiana is making progress, or most indicators other ana is making progress, on most indicators other states are making more progress. With some exceptions such as pupil/teacher ratio, Indiana seems to be losing ground in comparison with national means. In order to surpass the national averages, the study concludes that the state will have to redouble its commitment to education during the next de-cade. (47 references) (KM)

Life history interviews with four women holding doctorates in educational administration are presented in this paper, which examines how chances and choice affect women administrators' career decisions. A second focus is on how organizational structure in educational organizations can enhance career opportunities for women educators. Three anecdotes are presented to illustrate the relationships among chance, choice, and opportunities in the careers of particular women in particular organizational contexts. The narratives are categorized according to three themes-unexpected openings, widening horizons, and chance remarks. The stories suggest that women's opportunities can be expanded through the modification of existing structures. A review of current policy initiatives in Canada found that opportunity for females could be engendered through: special assignments; reward-ing mentoring functions; redefinition of the concepts of career and success; and affirmative action programs. A recommendation is made to foster environments where chance occurrences can be transformed into opportunities. (29 references) (LMI)

A rich description of the ways in which an effective principal utilizes symbolic leadership to develop shared school meanings and purposes is presented in this paper. Methodology involved the following: (1) individual and group interviews with 42 teachers, several other staff members, and the principal of an effective urban elementary school of the control of the enrolling 800 students; (2) principal observation; (3) document analysis; and (4) teachers' logbook analysis. Findings indicate that this effective principal used empowerment through understanding and au-tonomy and a whole-language, hands-on process ap-proach. In his first years at this school, the principal motivated improvement in language arts achieve-ment; now there was an emerging mathematics and science emphasis. Most effective was the principals' science emphasis. Most effective was the principals' use of symbolic language, resources, and time to enhance symbolic leadership. A limitation of the findings is that they constitute the researchers' constructed reality of the multiple realities existing within the school and the ethnographic description. An interview guide and taxonomy of symbolic lead-ership forms are included. (25 references) (LMI)

An interstate cost-of-living index from SMSA-

An interstate cost-of-living index from SMSA-An interstate cost-of-living index from SMSA-level market basket data is generated in this re-search. Models are developed for each of the four regions-Northwest, North Central, South, and West-to-explain differences in the cost of living among more than 180 SMSAs. Weighted regression coefficients were combined with comparable state-level data to establish a state cost-of-living in-dex. The index values were then normalized so that 100 represents the national average for all states. represents the national average for all states weighted by their populations. Finally, the inter-state cost-of-living index is used to calculate an adjusted average teacher salary for each state. The index is useful in comparing interstate expenditures on education, although it does not yield an estimate of real expenditures. A caution is that the index does not measure variations within individual states. Appendices include one figure, three tables, and a list of data sources. (9 references) (LMI)

ment, Vocational Training Centers Identifiers-Taiwan

The study sought to determine the relationships between work adjustment and selected personal, ed-ucational, vocational, and familial variables among 116 mentally retarded trainees from two vocations training programs in Taiwan. Findings included, among others: older trainees were more likely to accept rules/authority than younger workers; males accept rules/authors than frontier were better than females in work tolerance; less su-pervision was required for trainees who had fewer handicapping conditions, were taller, were not over-weight, and had more years of school experience; weigin, and had more years of school experience; job training was more important to subjects who had fewer handicapping conditions than to those who had more; special class experiences in either ele-mentary or junior high school were a positive factor mentary of junnor ngm school were a positive factor in work adjustment; present income seemed to correlate closely with work adjustment; the lower the educational level of the traince's father, the less supervision was required; individuals having more parent support may exhibit better teamwork and be more likely to accept rules; and the lower the family economic status, the more realistic were the individual comments. economic status, the more realistic were the individuals in their job goals. The best set of predictors for work adjustment was determined to be years of school, present income, and nature of present work environment. (Author/JDD)

Identifiers—*lowa

This study investigated the adult adjustment one year after leaving school of 130 individuals with behavioral disorders who graduated from Iowa special education programs in 1985 and 1986; the adult adjustment of 70 dropouts was also investigated. Adjustment areas examined included: living arrangements, leisure activities, mechanisms used to cope with personal problems, difficulties with law enforcement agencies, percent employed, location of employment, hours worked, wages, status of job, and fringe benefits. Employed versus unemployed individuals are compared in terms of gender, type of vocational training received in high school, paid emvocational training received in high school, paid employment during high school and individuals' ratings of the usefulness of their high school experiences. Results are reported separately for graduates and dropouts and for students in resource teacher programs versus the more restrictive program models of special class with integration, special class with little integration, and self-contained special class. Among findings was that only about one-third of the graduates and one-quarter of the dropouts were judged to have made a satisfactory adjustment. About one-quarter of the graduates and stment. About one-quarter of the graduates and one-half of the dropouts were neither employed nor a homemaker nor in a training program. Far fewer females than males were employed. Contains 18 references. The final report describes Project Continuity, a federally funded effort to provide continuity of care for handicapped infants with chronic illness or complex medical needs while in the acute care setting and to facilitate transition of the infant into the home environment. Goals were accomplished within the context of a family-centered intervention model. The project provided habilitative, educational, nursing and medical care in various settings to 42 infants and toddlers with such diagnoses as congenital heart condition, gastrointestinal anoma-lies, genetic disorders, and muscular skeletal prob-lems. Major project components included: (1) support for primary care nurses for incorporation of developmental strategies in nursing care plans for the hospitalized infants; (2) developmental assessthe nospitalized infants; (2) developmental assess-ment and intervention; and (3) case coordination. Quality assurance procedures required identifying national or local standards and monitoring the case coordination and nursing. Ten appendixes present such information as: the condition classification system, an Individualized Family Service Plan, the roles and sequence of activities for the case coordination process, a product dissemination flyer, and a workshop flyer. Contains 19 references. (DB)

Identifiers-Attitudes (Toward Disabled)

This study utilized qualitative methods to examine the social interactions that occur within supported employment settings between workers with disabilities and nondisabled co-workers. The study also examinet and nondisance co-workers. I ne study also examined the job supports at work settings, to understand the relationship between formal, job coach support services and natural job supports. Seven employees were studied in supported employment settings, using participant observation and interviews. Settings included a nursing home, a department store, a transportation company, two restaurants, a hospital, and a school. Findings are organized around seven common themes, including the low-status context of supported employment, the atypical design of supported job positions which were structured into an unvarying sequence of tasks, the importance of social interaction, the restricted the importance of social interaction, the restricted social participation of supported employees, the importance of natural supports, the hidden messages of job coaches, and discrepant perceptions of supported employees. It was found that job coaching interfered with mentoring for supported employees, and job coaches did not teach participation in social and job coacnes did not teach participation in social customs. As a result, supported employees received less natural support than their co-workers. Despite these problems, supported employees had become accepted members of the work setting. Includes approximately 75 references. (JDD)

gram Implementation, Respite Cate, port Groups Identifiers—Montana (South Central) Special Training for Exceptional People (STEP) is a private, nonprofit agency serving children with developmental disabilities (0-22 years) and their families in the south-central section of Montana, encompassing Billings and a Crow Indian Reservation. One of the services provided by STEP is specialized family care, to prevent placement out of cialized family care, to prevent placement out of family settings for children with intensive needs and taminy settings for children with intensive needs and to create movement to family settings from more restrictive environments. Program services include home training; in-home assistance; contracted services (occupational therapy, physical therapy, speech, etc.); architectural modifications; adaptive equipment; foster care; and extended respite. Case profiles demonstrate utilization of each of the types of support services by the 51 children receiving fa ily training and support services, including 3 Crow Indian children. Issues in providing family support on the Indian reservation are discussed, such as the poverty level, distance from Billings, and the need for cultural sensitivity. Strengths and limitations of the program are outlined. (JDD)

Identification
Identifiers—"Child Prodigies, *Extremely Gifted
This monograph reports on a study of six child
prodigies whose talents are manifested in writing,
music, and mathematics. The boys, aged 3.5-9
years, were observed in natural settings and while practicing their talent specialty, and interviews were conducted with the boys, their parents, and their teachers. The study concludes that prodigies focus on a single specialized talent, while otherwise possessing high, but not extreme, general intellectual ability. An enormous amount of work, practice, and study are needed to develop the prodigious talent, and prodigies need a great deal of assistance from parents and teachers. Only certain bodies of knowledge seem conducive to early prodigious mastery. The prodigy's arrival must come at a time when the culture values and supports development and recog-nition in the domain in which the prodigy is talented. It is concluded that: (1) by expressing such a specialized talent, the prodigy reflects a very spe-cialized way of thinking and understanding, an evolutionary strategy that is an exception to the prevailing rule of human general adaptability; and (2) in several important ways, the process of mastery of a domain is the same for anyone seeking to learn it, whether or not they are exceptionally talented. Includes nine footnotes. (JDD)

Identifiers—*Indiana
This monograph compiles and analyzes court cases and due process hearings related to the identification and provision of services for gifted and tal-ented youth, with special focus on the state of Indiana. Federal legislation related to the gifted commenced with the National Defense Education Act, followed by the 1969 amendments to the Ele mentary and Secondary Education Act. These and other federal measures stimulated initiatives within the states to develop educational opportunities for the talented and gifted, and 25 states and Guam mandated educational services. Disputes concerning educational services can be settled in three ways: mediation, due process, and litigation. Many states have due process provisions for the gifted that are similar to those for the handicapped. Ten recommendations are offered for due process in Indiana, mendations are offered for our process in Indiana, including establishing statewide standards, training hearing officers, reporting decisions, and supplying technical assistance to school corporations. Litigateon concerning gifted education is discussed in the areas of early admission to school, admission to special statements. cial programs, racial discrimination, curriculum modification, transportation, teacher competence and certification, accidents, and child custody. Several suggestions for preventive law in Indiana are offered. Includes four references, a table of 14 court cases, and citations for seven federal laws. (JDD)

Descriptors—Behavior Theories, Bibliotherapy, Communication Skills, Educational Games, Elementary Secondary Education, *Gifted, Individ-ual Characteristics, *Leadership, Leadership Qualities, Leadership Styles, *Leadership Training, Self Concept, Simulation, Student Character-istics, *Student Leadership, *Teaching Methods This monograph presents activities and guidelines

for developing leadership training programs for gifted and talented students. Three theories of leadership are discussed: trait theory which assumes that one is either born with leadership talent or one does not have it; leadership style theory in which the patterns of leadership are categorized as demo-cratic, autocratic, and laissez-faire; and situational leadership in which individuals are seen as having leadership ability that can be observed in specific situations. An examination of the leadership literature and biographies of successful leaders reveals several characteristics: self-understanding, self-acceptance, self-awareness, verbal effectiveness, listening, predicting skills, decision-making skills, and creative problem solving. Specific leadership activities are presented, identified by grade levels. Bibliotherapy is presented as a method of developing communication skills and stimulating self-awareness. Two stories are used to demonstrate the use of bibliotherapy-"The Giving Tree" by Shel Silver-stein and "The Fall of Freddie the Leaf" by Leo Buscaglia. Simulation is discussed as another tool to develop leadership, with a description of a sample simulation game called Planet Nova, in which students colonize a new planet and affect its growth. Includes 17 references. (JDD)

Educational Therapy, Elementary Secondary Education, "Gifted, Individual Needs, Locus of Control," Parent Child Relationship, Prevention, Self Concept, "Stress Management, "Stress Variables, Student Needs, "Teacher Student Relationship, Teaching Methods, Theories, "Underachievement

The paper considers pressures on bright children and the relationship of such pressures to underachievement. It gives specific suggestions on the pre-vention of underachievement to both parents and teachers. Pressures often felt by gifted children in-clude pressures to be brilliant, to be creative, to do something spectacular, to find oneself, to be popular, to be good, to be the best sibling. Noted is a relationship between underachievement and a lack of personal locus of control in which students do not internalize the relationship between effort and out-come. A quadrant diagram illustrates relationships between effort and outcomes resulting in either achievement or underachievement. Six recommen dations for parents include consistency in setting effort and outcome goals for children, modeling ef-fort and satisfaction of accomplishment, and emphasis on the positive. Seven recommendations for teachers include challenging gifted children in basic skill areas, teaching divergent thinking processes, and maintaining a positive classroom environment.

Descriptors—Agency Cooperation, Community Programs, Delivery Systems, *Developmental Disabilities, Eligibility, *Family Programs, Na-tional Surveys, Needs Assessment, Parent Role, Social Services, State Legislation, *State Pro-grams, Trend Analysis The monograph examines the status and needs of

state family support efforts over the last decade, based on interviews with 83 people in state Developmental Disabilities Councils and various state agencies. An introductory section provides an historical context for family support, presents a synthesis of state family support efforts, and delineates key components of appropriate family support systems including: (1) legislative mandate; (2) articulated guiding principles; (3) family focus; (4) parent control; (5) parent oversight; (6) flexible funding: (7) core services; (8) service brokerage; (9) interagency collaboration; (10) inclusive eligibility; (11) statewide scope; (12) Medicaid policy; (13) community centeredness; and (14) active outreach. The major portion of the document consists of profiles of each state, which typically include information on name and nature of program, date of implementation, administering agency/contact person, number of families served, eligibility criteria, services cov-ered and allowable expenditures, limits on benefits, current funding level, background, program struc-ture, implementation issues, Medicaid policy, re-lated efforts, evaluation, future directions, and lessons learned. Appended are the phone interview side and associated letter. Contains 28 references.

Descriptors—Children, "Disabilities, Higher Education, "Interdisciplinary Approach, "Occupational Therapy, "Physical Therapy,
Questionnaires, "Role Perception, Seminars, Student Attitudes, "Teamwork, Therapists
The practicum provided interdisciplinary team

The practicum provided interdisciplinary team educational experiences for students of physical and occupational therapy. Activities included adminisoccupational interlay. Activities included admini-tering a questionnaire to physical therapy students to determine student understanding of pediatric physical and occupational therapy role delineation. Questionnaires were also administered to graduates and practicing therapists to determine the need for pre-service training on the team approach and team effectiveness. A specialized pediatric physical ther-apy seminar course was conducted and evaluated in conjunction with an occupational therapy seminar course. Evaluation indicated that students increased their commitment to the importance of teamwork in their commitment to the importance of teamwork in pediatric therapy and increased cooperative activi-ties between occupational and physical therapy fac-ulty members. About half portion of the document consists of appendixes, including the pre/post-train-ing questionnaire given to students, classification for analysis of questionnaire results, the question-naire given to new graduates, the telephone interview question list, the physical therapy class syllabus, the case study assignment, the parent training handout, cooperative group games ples of student responses, and raw data. The guide is intended to assist Manitoba physical education teachers in the process of integrating stu-dents with disabilities into regular physical educadents with disabilities into regular physical educa-tion classes. The manual provides an introduction to students with special needs, stresses the need to create an accepting environment, discusses various teaching tips, and highlights resources available to teachers. Part 1 presents a discussion of human movement including "learning to move," the role of practice, and "moving to learn." Part 2 presents descriptive information and specific hints for physi-cal activity programming for the following disabilical activity programming for the following disabilities: asthma, visual impairments, cerebral palsy, deafness and hearing impairment, diabetes, convulsive disorders, physical awkwardness, mental retar-dation, Down Syndrome, autism, muscular dystrophy, obesity, and spina bifida. Part 3 provides dystrophy, obest, and spins and the rat provides principles for creating an accepting environment including information on mainstreaming as a continuum of participation, teacher attitudes, creating peer acceptance, and eliminating environmental barriers. Part 4 offers teaching tips in the areas of assessment, task analysis, behavioral teaching principles, activity analysis, and activity modification-/adaptation. Part 5 describes additional resources including screening tests, checklists, and evaluation instruments; forms; modified equipment (e.g., aquatic devices, bicycling equipment, devices for ball activities); adaptive equipment; and materials suppliers. The bibliography contains 40 references.

The study used a multiple case study method to investigate the quality of the educational and social experiences of elementary-level and secondary-level children with disabilities currently integrated ievel children with disabilities currently integrated within the Australian regular school system. This second stage of the study used for its sample 23 children with intellectual disabilities, 18 with physical disabilities, 7 with multiple disabilities, 5 with learning disabilities, 5 with 20 ities, and 20 who were in support classes for physical or intellectual disabilities and 20 who were in support classes for physical or intellectual disabilities within a regular school. Most students were found to be effectively mainstreamed, a condition which to be effectively mainstreamed, a condition which was found to be closely associated with: (1) structured teaching methods including clear objectives, regular monitoring, and a teacher-directed approach to basic skills; (2) appropriate support; and (3) positive school ethos. The nature of the child's disability did not appear to affect the success of the placement. Integration was facilitated when parents or caregivers were committed to mainstream place-ment and willing to cooperate with the school's program. Appendices report exemplary case studies. Thirty references are listed. (PB)

hometric validation of an instrument to measure co-worker involvement with employees with handico-worker involvement with employees with nanon-caps in supported employment settings. The Co-worker Involvement Instrument contains 10 items pertaining to physical integration, social inte-gration, vocational integration, training, associating frequency, associating nature, befriending, advocat-ing, evaluating, and information giving; and was tested in 12 supported employment programs in Illi-nois. The reliability study was broken into studies of inter-rater reliability and test-retest reliability. Based upon 68 ratings made by rater pairs, the total score inter-rater reliability was estimated to be. 82. In a second sample in which 18 different rater pairs scored the instrument, the total score was estimated to be .80. Based upon the comparison of ratings by to be .80. Based upon the comparison of ratings by the same rater separated by a period of time, the total score test-retest reliability was estimated to be .88. The validity of the instrument was supported by a face validity study in which only one item was considered appropriate to include by less than 80% of raters, and the instrument overall was considered an appropriate measure by 90% of the raters. In-cludes 22 references. (JDD)

retardation, "Feer Relationship, Social Integra-tion, "Supported Employment
This study describes varying types of nonhand-icapped co-worker interactions with supported em-ployees. The sample included 341 supported employees with mental retardation served by com-munity rehabilitation facilities in Illinois. Results indicated that co-workers interact extensively with persons who are mentally retarded. These interac-tions include associating, evaluating, advocating, training, collecting data, and befriending. Surprising findings included high levels of advocacy between co-workers and persons with severe/profound mental retardation, and a relatively high percentage of co-workers assuming evaluation and training roles. Results are discussed in relation to the work behavior literature which suggest that co-worker interac-tions may reflect support that is natural to the work-place. Includes 24 references. The purpose of this study was to identify job site

supervisors' opinions regarding job placement, training, evaluation, and job maintenance of persons with disabilities. In order to assess the role of job site supervisors, 10 supervisors in businesses that em-ployed individuals with handicaps were interviewed. Employment sites represented four occupational areas: food service, light industrial, janitorial/maintenance, and warehouse. Job site sujanitorial/maintenance, and warehouse. Job site su-pervisors were found to be directly involved in pro-viding support on the job. Supervisors' roles included hiring the employee, modifying the job, providing direct training, assisting co-workers in providing employee support, evaluating the em-ployee, and providing incentives to maintain em-ployee work performance. Additionally, all supervisors indicated that they would welcome as-sistance from a job coach in order to provide addisistance from a job coach in order to provide addi-tional support to target employees. Includes 10 references. (Author/JDD)

The project sought to determine the content and form of materials that would enable parents of children with disabilities to become informed critical consumers of respite services. Project activities in-cluded establishment and utilization of a national advisory panel; an indepth review of the literature on family supports, systems change, and consumer empowerment; and a national survey of parents. empowerment; and a national survey of parents. The literature review found that respite literature is focused on establishing and maintaining respite services, with few evaluation studies or resource guides. Respite literature is primarily directed at providers. The national survey was shrink-wrapped with the October 1988 issue of "Exceptional Parent Magazine," which was distributed to some 22,943 subscribers; of these, 2,847 sent back completed and usable forms for a return rate of 12.41 percent. The survey covered: description of the family member with a disability; description of the household and caregiver; availability and use of respite; satisfaction with respite; problems with respite; desirable information and most preferred form for information; and desirable forms of family support services. The study concludes that respite is a valuable resource for families who are able to utilize it; however, families seem to have substantial problems working out the details of obtaining necessary support. Implica-tions of the study for developing training materials are outlined. The report concludes with 11 refer-ences, a list of 6 resources on respite care, a list of members of the project advisory panel, and a copy

This paper progenits results from interviews with

This paper presents results from interviews with 48 New York families of children with severe disabilities or chronic illnesses who were served by Sick Kids (need) Involved People (SKIP) of New York, Incorporated, a case management and advo-cacy service. The report is divided into sections on the families and their children, daily routine, spethe families and their children, daily routine, spe-cialized care, impact on the family, informal sup-ports, financing home care, services to the child, family supports, effectiveness of SKIP management, families' views of the future, crucial issues, and confamilies' views of the future, crucial issues, and con-clusions. In the concluding section an impression emerges of a schizophrenic system of public and private supports for home care for children with severe disabilities and specialized health care needs. The experience of families did not support the rhet-oric of public officals on the centrality of home, community, and family in service delivery. An appendix outlines methodological considerations in

evaluating family support programs. Listed are 22

This manual is intended to accompany technical assistance efforts aimed at improving selected states' home health care programs for children with chronic illness and severe disability. Summary descriptions of funding sources are presented, includ-ing purpose, eligibility guidelines, and services covered, as well as additional information as warranted. The first section of the manual describes funding streams available to states and applicable to home care support, including: medical care (six); income support (two); social services (eight); educa-tional services (four); transportation (three); and housing (seven). The second section reviews differnousing (seven). In esecond section reviews different strategies states have used to enlist insurance companies in a public partnership supporting home care. Appendixes list legislative acts and authoriza-tion for programs and provide a chart of federal participation rate for Medicaid programs by state. Contains 45 references. (PB) ED 323 710 EC 232 139

can Culture, Spanish Speaking
This study examined attitudes among Puerto Rican-American parents toward the processes of as-sessment, placement and instruction of students with disabilities. Twelve such families in a low-in-

come, mostly Hispanic urban community were interviewed and observed and ethnographic methods used to assess the role of their culture in parents' interpretations of their children's special education placement. Findings included: (1) significantly dif-ferent cultural meanings were attached to classifica-tion terms (some carrying moral implications); (2) parents had their own theories explaning their chilparents had their own theories explaning their children's difficulties; and (3) inadequate communication efforts by school administrators were compounded by language difficulties and a reliance on written communication between school and family. This document presents the 1989 Annual Statistical Report on the three major Program Activities of the National Association of Protection and Advo-cacy Systems, a federally funded agency designed to cacy Systems, a federally funded agency designed to directly impact the delivery of state social, medical, and legal services to persons with disabilities. Data on the three programs—The Client Assistance Program (CAP), the Protection and Advocacy System for Persons with Developmental Disabilities (PADD), and Protection and Advocacy for Menally III Individuals (PAMII)—are presented as state by state totals with graphics that display total clients served for the past 3 years. Program narrative analyses provide a broad overview of activities undertaken nation-wide. Conclusions include the following: services have increased in the PADD (13%) and PAMII (19%) programs whereas the CAP program experienced a 6% drop in services; PADD services appear to be increased in the areas of offenders, housing, and guardianship issues; tions; case problem areas have increased in the areas of offenders, housing, and guardianship issues; PAMII has experienced marked increases in cases involving private psychiatric hospitals. Other changes are reported in the areas of establishing priorities, accountability and oversight, access, and federal administrative rulings. Also included is a statement of principles for the association and a list of CAP state offices and state protection and advocacy agencies. (DB)

This technical recent in part of continuation.

This technical report is part of a series on AIDS/-HIV (Acquired Immune Deficiency Syndrome/Hu-man Immunodeficiency Virus) and is intended to help link various legal advocacy organizations pro-viding services to persons with mental illness or developmental disabilities. This report focuses on liability issues from worker and client exposure to HIV. General principles of law are applied to findings of liability that might be brought against an agency or facility on claims of negligent transmis-sion between clients or workers in the following situations: failure to provide a safe environment, negligent worker or client exposure; failure to maintain confidentiality; and failure to protect or warn.

Agencies are encouraged to minimize their potential liability by policies which include: (1) an infecton control policy and implementation procedures;

(2) a sexual behavior policy and procedures for counseling and intervening with recalcitrant clients;

(3) a record keeping policy and procedures on confidentiality; (4) an HIV testing policy and informed control to the control of a worker. consent procedures; and (5) creation of a professional advisory committee with multi-disciplinary members that include disability attorneys, physicians, social workers, etc. to advise on policy development and ongoing issues. Contains 33 references and 12 additional resources. (DB)

Identifiers-

This study investigated the ability of high-func-tioning verbal individuals with autism or Down syndrome (DS) to respond appropriately to conversational "social scripts" involving reactions to another person's distress. Subjects were 13 persons with autism and 13 with DS, aged 5-27, matched on verbal mental age. During a "tea party" situation, subjects were each told about an examiner's unhappy personal experience (e.g., a stolen wallet, a sick pet). If the subject did not produce an acceptable response after several probes, the other examiner modeled a sympathetic response and more probes were administered. Subjects with Down syndrome gave a significantly greater per-centage of relevant suggestions and sympathetic comments, whereas subjects with autism gave a significantly greater percentage of responses relating only to the tea party. More subjects with autism than DS required modeling. Although a smaller percentage of subjects in the autism group than the DS group exhibited improvement after modeling, some subjects with autism were able to improve, suggest-ing that they understood some aspects of the social situation but needed help formulating an appropri-ate response. Includes 21 references. (Author/

This report on the Intermediate Care Facility for
the Mentally Retarded (ICF-MR) and related programs under Title XIX (Medicaid) of the Social
Security Act aims to assist in consideration of improvements to Medicaid services. The report begins
with a background description of the key Medicaid
programs of interest, discussing: federal involvement in care for individuals with mental retardation
arise, to ICF-MR: establishment of the ICF-MR. prior to ICF-MR; establishment of the ICF-MR program; federal "look behinds" of state program review efforts; the phase down option; Medicaid review entorts; the phase down opinion, measures waiver, nursing home restrictions, and proposals for Title XIX reform. The second part contains state-by-state and national statistics on ICF-MR and related Medicaid home and community based services and nursing home utilization. The third part describes characteristics of ICF-MR facilities and their residents, with comparative statistics for non-certified facilities. The data cover: facility administration, resident movement, and resident characteristics (level of retardation, type of related conditions, age distribution, activities of de ing, moods, medical conditions, use of special equip-ment, and employment status). A basic description of the characteristics of nursing home residents with mental retardation and related conditions is also provided. Includes 29 references. (JDD)

Secondary Education, Job Satisfaction, Psychological Patterns, Self Evaluation (Individuals),
*Special Education Teachers, *Stress Management, *Stress Variables, *Teacher Burnout
This monograph examines stressors encountered
by special educators, ways of coping with professional demands, and reasons why some teachers
handle job stress better than others. It is intended to
help special education teachers take a more objective look at what they do and identify strategies and tive look at what they do and identify strategies and techniques to alleviate some job-related stress and tension. Symptoms of burnout are reviewed, and a questionnaire is provided to help special educators examine behavioral patterns to determine the degree of burnout they are experiencing. The impact of stress on the physical, emotional, and psychologi-cal well-being of teachers is examined, and the man-ner in which job stress affects professional performance is addressed. Several studies that look at job stress and the special educator from a generic, nonspecific perspective are described, and then job stress of teachers of students with learning disabilities, behavioral/emotional problems, and mental deficiencies is discussed. Individual initiatives and organizational strategies for developing coalitions among school staff are offered. Ten stress manageamong school staff are offered. Ten stress management strategies are analyzed: diet and exercise, relaxation techniques, social support systems, goal setting, creative problem solving, time management, networking, self-talk, stroking, and self-given gifts. Includes 108 references. (JDD)

*Units of Study
The three units of study presented are designed to
promote space-related learning opportunities for
gifted students and were prepared by recipients of
the Scobee curriculum awards. In "Galactic Colonization for Our Future Astronauts" (Jacqueline
Stringer Output Stringer) Shimonauff), elementary-level students simulate a space experience in which a ship carries materials into high earth orbit to be used in building a space station-travel ship. The travel ship carries peop a planet in another galaxy, and on the planet, three colonies are developed. The students learn about spaceship design and staffing and establishment of various systems (government, economics, educa-tion, transportation, and communication) in the

new colonies. "Flying High: A Space Science Curriculum Unit" (Paul Robinson) simulates for secondary students the experience of selecting, designing, building, and launching an experiment on the space shuttle. "Search for Truth" (Jane Schaffer), for middle grades and secondary students, stresses the value and meaning of searching and exploring self, others, and the world through literature. Each unit of study includes a bibliography. (JDD)

Project NY

The paper presents a protocol developed by the Child-Centered Inservice Training Project (Syracuse, New York) to provide inservice training and technical assistance for personnel working with children with severe disabilities in regular schools. The following topics are covered in outline format: (1) selection of target students; (2) the technical assistance agreement; (3) training activities; (4) baseline data on target behavior; (5) functional analysis; (6) joint development of a written intervention plan; (7) activities of the intervention phase; and (8) evaluation activities and responsibilities. The major portion of the document consists of the forms used in the project including: inservice training agree-ment, a parent information letter, student participation permission, consultant visit and teacher interview, student schedule, scatter plot sheet, daily log, incident record, intervention plan, consultant meeting form, skill acquisition and excess behavior form, target student profile, target student evaluation report, and program quality indicators. Includes three references. (DB)

Project NY

The inservice training module, developed as part of the Child-Centered Inservice Training Project (Syracuse, New York) is designed for use with educators providing services for students with developmental disabilities and behavior problems. The module comprises six units which incorporate theory, demonstration, practice, and feedb intended to be presented over approximately 10 hours. The model stresses effective behavior change in a manner which is both humane and normalized. A decision process is outlined which can be used to plan appropriate interventions to address a particu-lar student's behavior problems. On-site follow-up to demonstrate specific strategies and feedback is also encouraged. The six units address: the educa-tive approach (introduction); the educative approach applied to behavior problems (an overview); identifying priority target behaviors and making initerativing priority target behavior and making in-tervention decisions; assessing behavior and deter-mining function; intervention and crisis management; and evaluation and outcomes. Appended are sample data collection forms and a sam ple case study. Contains 8 references. (DB)

Project NY

This inservice training module was designed as part of the Child-Centered Inservice Training Project (Syracuse, New York) for use with parapro-fessionals in educational programs for children with developmental disabilities. Use of the materials is recommended to encourage team problem solving, to practice new skills, and to provide ongoing sup-port mechanisms to encourage continuing use of new skills. The module describes the basic ideas behind positive approaches to challenging behaviors beman positive approaches to chainenging behaviors and describes an educative process for developing individualized programs to address students' behavior problems. A six-step problem solving process is described, including: (1) identify the behavior problem; (2) gather information about when the behavior does/does not occur; (3) develop an idea about the purpose of the behavior; (4) make a plan that in-cludes prevention, teaching, and reacting to the behavior; (5) use the plan and keep records on behavior frequency; (6) evaluate the plan and adjust if needed. Appended are sample data collection forms. Contains six references. (DB)

This paper presents a case study of a young girl diagnosed as autistic and having a history of tan-trums, who was grouped with six other students with mild to moderate disabilities. Intervention lans developed by her teacher and a consultant addressed the girl's needs for more positive social and communication skills, focusing on increasing demands for task participation and social interaction within the context of age-appropriate func-tional skill routines and leisure activities. These methods brought about substantial results in inte-grating the student with her peers, but lack of avail-able support services led to her withdrawal and entry into a residential, segregated placement. In-cludes three references. (PB)

Adoptive and Birth Family Adjustment to Rearing Retarded Children.

Spons Agency—National Inst. of Child Health and Human Development (NIH), Bethesda, Md. Pub Date—May 90 Contract—NICHD-21993

Note—14p.; Paper presented at the Annual Meeting of the American Association on Mental Retardation (14th, Atlanta, GA, May 27-31, 1990). Funds were also provided from St. Mary's College of Maryland Faculty Development Grants. Pub Type—Speeches Meeting Papers (150) EDRS Price - MF01/PC01 Plus Postage. Descriptors—*Adjustment (to Environment). *Adopted Children, Adoption, *Biological Parents, *Child Rearing, Comparative Analysis, Depression (Psychology), Family Characteristics, *Family Environment, *Mental Retardation, Mothers, Placement Family Environment, *Mental Retardation, Mothers, Placement The study identified 81 families who adopted chil-

dren with mental retardation or at risk for mental retardation, and compared them with 61 matched families with similar birth children. For birth families, the initial diagnosis was a time of crisis, with high depression scores, while scores at follow-up (an average of 5.3 years later) indicated no significant average of 5.3 years later) indicated no significant depression. Adoptive families showed no significant depression at initial placement of the child or at follow-up. Birth mothers reported more limits on family opportunities, more family disharmony, more concern with the lifespan nature of the commitment to the target child, more financial stress, and more acknowledgement of the personal burden of caring for the target child than adoptive mothers. No differences were found on the lack of personal reward, terminal illness stress, or the preference for institutional care. Adoptive mothers scored higher reward, terminal illness stress, or the preference for institutional care. Adoptive mothers scored higher on measures of family pride, family accord, and marital happiness and consensuality. It is concluded that: (1) adoption is a successful intervention for children with disabilities as measured by parent and family functioning; and (2) birth parents recover from their depression at the time of diagnosis and become better adjusted. Includes five references. (JDD)

Behavior, *Infants, *Interrater Reliability,

*Mother Attitudes, Mothers, Observation, Parent Child Relationship, *Personality, Personality As-

The study compared maternal and trained ob-server evaluations of infant temperamental charac-teristics, to determine how closely the ratings correspond, and to analyze the impact of maternal drug abuse habits on maternal ratings of infant temperament. In relating observer to maternal ratings of infant temperament, seven dimensions were com-pared: activity level, adaptability, approach, intensity, mood, distractibility, and persistence. Only two of these, activity level and persistence, showed significant correlations between observer and masignificant correlations between observer and ma-ternal ratings. A principal components analysis of the observer ratings revealed a constellation of char-acteristics—mood, approach, and adaptability— which have been defined in the literature as charac-teristic of the "easy" baby. Maternal ratings of in-fants on these three dimensions appear to be negatively correlated with maternal drug habits; as maternal drug abuse scores increased, so did maternal reports of difficult infant characteristics. Descriptors—Adolescents, Environmental Influ-ences, "Identification (Psychology), Interaction, *Labeling (of Persons), *Learning Disabilities, Secondary Education, *Self Concept, Self Es-teem, *Social Influences, *Student Reaction Identifiers—*Symbolic Interaction

Identifiers—*Symbolic Interaction
This study used symbolic interaction theory to
address the following question: what is the self-identity, or perceived "I am," held by adolescents with
learning disabilities (LD) in the public school environment? According to symbolic interaction theory,
experiencing the label and role of specific learning
disability would reflect the influence of significant
others in the environment (peers, teachers/administrators, and sometimes parental as they socially intrators, and sometimes parents) as they socially in-teract with the LD adolescent and signify an identity as a member of the LD group. A qualitative-ethnographic research design was used to study 15 specific learning-disabled adolescents in the natural setting of their public school environment. Data formats included a self-report, nonstructured interviews, and participant and nonparticipant observa-tion. The research demonstrated that many LD youth have been devalued and belittled by significant others, producing perceptions of "I am" which are clearly negative and indicative of low self-es-teem. Includes 70 references. (JDD)

This report is part of a series prepared for planning and developing a comprehensive, coordinated service delivery system for Arizona infants and toddlers who are developmentally delayed or at risk of developing handicapping conditions, and their families. It identifies Arizona agencies designated to re-

spond to the special needs of young children and their families. State-level agencies and programs in-cluded are the Department of Economic Security, Department of Health Services, Department of In-surance, Health Care Cost Containment System, State Board of Education, State School for the Deaf and Blind, Office of the Governor, Council for the Hearing Impaired, Center for Law in the Public In-terest, and Head Start. The United States Social Security Administration is also described. The con-tent for each agency consists of: mission statement, administrative structure, eligibility requirements, services offered, interagency coordination efforts, federal and state laws and regulations governing the agency, source of programmatic funding, and advis-ory councils. A section of recommendations outory councils. A section of recommendations out-lines implications of the policy analysis for implementing early intervention services. A 49-item reference list, a list of federal and Arizona laws, and the text of Part H, Section 672, of Public Law 99-457 conclude the document. (JDD)

This report is the second in a series of publications developed to assist in the planning and development of a comprehensive, coordinated service delivery system for Arizona infants and toddlers who are developmentally delayed or at risk of developing handicapping conditions, and their families. It docu-ments the number of children in Arizona currently being served, and the number in need of special services, based on the prevalence and incidence of certain characteristics in the population and an interpretation of the broad definition of who needs early intervention provided in Public Law 99-457. Three distinct groups are considered: (1) children who are experiencing developmental delays; (2) children who have a diagnosed physical or mental condition that has a high probability of resulting in developmental delay; and (3) children who are at risk of having substantial developmental delays if early intervention services are not provided. The report provides numerical projections of the size of report provides numerical projections of the size of the target population through the year 2000, and examines the geographic, ethnic, and socioeco-nomic distribution of the target population across Arizona. Appendices contain statistical data and eli-gibility policy formation information. Includes 50 references. (JDD)

This report is the final in a series designed to assist in the planning and development of a comprehen-sive, coordinated service delivery system for Ari-zona infants and toddlers who are developmentally delayed or at risk of developing handicapping con-ditions, and their families, as outlined in Public Law 99-457. It documents the needs of Arizona's families as identified by a statewide, representative sample of 536 parents and caregivers who were interviewed concerning their involvement in meeting their child's needs, the nature and type of ser-vices they were receiving, their satisfaction with the services, their need for other services, financial needs, information needs, and emotional support needs. Services evaluated include medical, rehabilitative, educational, family programs, and low-income family services. The report offers a profile of the sample, summarizes interview responses, and identifies unique needs of different ethnic groups and of rural versus urban residents. An executive summary discusses four conclusions specific to financially stable families, families with low incomes who are not Arizona Health Care Cost Containment System (AHCCS) recipients, minority families, and AHCCS recipient families, and offers one conclusion concerning all families. An appendix describes the project design, sample, methodology, and analysis. (JDD)

Based on suggestions of participants at the second
annual Instructional Methods Forum held in June
1989, the monograph considers cognitive-based approaches to teaching mathematics to students with
learning problems and the implications for the de-

learning problems and the implications for the de-sign of media and materials. It discusses characteristics of successful cognitive approaches and the role of media and materials in facilitating this form of instruction. An introductory chapter looks at possible reasons for United States students' difficulties with mathematics and proposes that cognitive-based approaches be used to stress conceptual as well as procedural knowledge. The second chapter looks at mathematical learning among students with disabilities. Cognitive-based principles for teaching mathematics are presented in chapter 3, including findings from research on children's mathematical thinking and a taxonomy of word problem types. The fourth chapter considers instructional components of cognitive-based mathematics teaching, grouped into those relating to the content for in-struction and those relating to the methods for teaching the content. In the concluding chapter, publishers are encouraged to develop cognitive-based textbooks and instructional materials. Appended are a list of the forum participants, samp records from the instructional materials database of the Information Center for Special Education Me-dia and Materials, and a bibliography of approxi-mately 170 items. Based on suggestions of participants at the second annual Instructional Methods Forum held in June 1989, the monograph considers cognitive-based approaches to teaching mathematics to students with learning problems. It addresses identification of characteristics of successful cognitive approaches and the role of media and materials. An introductory chapter looks at possible reasons for United States students' difficulties with mathematics and proposes that cognitive-based approaches be used. The second chapter looks at mathematical learning among students with disabilities. Cognitive-based among students with unanties. Cognitive-based principles for teaching mathematics are presented in chapter 3, including findings from research and a taxonomy of word problem types. Chapter 4 offers two examples of such approaches including the Cognitively Guided Instruction program (which improves teacher understanding of how children learn mathematics) and the Verbal Problem Solving Among the Mildly Handicapped Project (which uses specially designed materials in its problem-solving focus). The fifth chapter considers instructional components of cognitive-based mathematics concerned with both content and teaching methods. The sixth chapter considers the role of the teacher in cognitive-oriented programs, and a summary chapter suggests areas for further research. Appended are a list of the forum participants, sample records from the instructional materials database of the Information Center for Special Education Me-dia and Materials, and a bibliography of approxi-mately 170 items. tario), *Ontario

The paper reports on a survey of 800 members of The paper reports on a survey of sour members or parent, teacher, and administrator organizations to identify present practices regarding the integration of exceptional students in Ontario public schools. Responses were received from 415 individuals. The questionnaire seeks data about the effects of the Education Amendment Act, 1980, which mandated that all exceptional students have access to free and appropriate special education programs. The trend toward increased integration is examined and principles of successful integration, such as class size small enough to allow for individualized programs, are identified. Analysis of survey results indicated a range of integration practices currently being used

in Ontario. Seventy-two percent of elementary teachers and 67% of secondary teachers reported having between one and four identified exceptional students in their classrooms. Most administrators indicated that a full spectrum of facilitative services indicated that a full spectrum of facultative services are in place, including consultants and resource personnel, special material and equipment, non-teaching assistants, and inservice programs for teachers. Teachers and parents were less confident about the availability of these services or of the careful selection of students for regular class placement and appropriation of the regular class placement and the regular class teacher. Teachers preparation of the regular class teacher. Teachers and administrators also differed on the availability of inservice programs. All respondent groups agreed that class size remains a problem. The questionnaire is attached. Contains 18 references. (DB)

The final report describes the Getting Started Together Project which provided inservice/continuing education for health and education professionals serving Nebraska's handicapped and at-risk chil-dren birth to 3 years of age. The programs's objec-tives were: (1) develop a 48-hour curriculum on developmental and psychosocial needs of the handi-capped infant; (2) define and deliver this training to health professionals; (3) develop teaching tools to support this training; and (4) develop and imple-ment a plan of evaluation. Among project activities were implementation of a needs assessment; development of the curriculum which included assessopment of the curriculum which included assess-ment, intervention, parent techniques, developmental disabilities, case coordination, and interdisciplinary team development; presentation of the curriculum through a variety of delivery meth-ods (e.g., brief local courses, telecommunications courses, and independent learning packets); and evaluation using both formative and summative techniques. A special feature of the program was the collaboration of experts from the fields of special education, pursing, and continuing education. The education, nursing, and continuing education. The training model is recommended for replication in other states. Appendixes include brochures describing inservice offerings, a listing of dissemination activities, and dissemination brochures. Includes 13 references. (DB)

 This paper describes studies conducted in Saudi

This paper describes studies conducted in Saudi Arabia that: (1) investigated the effect of the number of orthographic alternatives of English conso-nant sounds on the spelling responses of 48 first-year secondary students studying English as a foreign language (EFL); and (2) compared the use of two spelling mechanisms of these first-year secondary students with that of 90 first-year interemdiate school students, representing pre-intermediate and beginning levels of proficiency, respectively. Data for the younger group were obtained in an earlier study. The test used consisted of 37 Arabic words for which students were to supply the English words, and included 50 orthographic representawords for which students were to supply the English words, and included 50 orthographic representations of 22 English consonant sounds. In the first study, the more advanced group was found to have significantly more correct spelling. For the second study, two spelling mechanisms were distinguished, including sound-to-print and selection. While the including sound-opinit and selection. While the two mechanisms appeared to be used more efficiently by the secondary students, patterns were similar in the two proficiency groups. Further research comparing spelling behavior at these and higher proficiency levels and in the native and secondary the secondary of ond language is recommended. (MSE)

Teaching

The Bilingual Education Academic/Career Outreach for Newcomers Program (Project BEACON) completed its fourth year. The goals of Project BEACON are to facilitate acquisition of English proficiency, develop native language literacy skills, and provide instruction in bilingual and English content area/vocational classes. The project served 753 students of limited-English-proficiency at 5 high schools in Queens (New York). Participants were native speakers of Spanish, Chinese, and Korean. The program met its objectives for staff development and parental involvement activities. Students made significant gains in English language skills, and the project met its objective for career education. The native language skill development objective could not be assessed because of a lack of pertinent data. The project developed several cur-riculum materials, although this was not a specific objective. Evaluation recommendations include: (1) securing the services of a full-time, Spanish-speak-ing resource specialist for two of the high schools, if funds permit; and (2) acquisition and use of Span-ish materials for content area courses. acy, *Prep Study System

An examination of family literacy programs was made in this newsletter issue to reveal the trends and practices of these programs and their contribu-tion to the development of children of refugee par-ents. The examination found that most effective and innovative programs recognize that literacy instruc-tion is more effective when it is content based and begins, as much as possible, within a culturally fa-miliar context; takes into account what the students say they want and need to learn, as well as what the schools say is needed; and recognizes that while home can be a place of stress for language-minority children, it can also be a source of tremendous strength and support. Further discussions focus on how the program Preparing Refugees for Elementary Programs encourages parent involvement, and on observations concerning parental silence about their children's instruction and what it could mean. Teacher Institute

Teacher Institute
The English-as-a-Second-Language (ESL)
Teacher Institute, created in 1980, is a staff development program for preparing instructors to use ESL techniques and materials. The Institute is for beginning and inexperienced ESL teachers. An evaluation of the 1986-87 institute was undertaken to determine the institute's impact on instructors' abilities to use ESL techniques, sequential steps, and competency-based adult education (CBAE) classroom management methods, and instructors' and trainers' perceptions about the acquisition of in-structional skills through systematic training and reinforcement. Two types of data were collected including classroom observations of the use of CBAE methods by participants, and survey re-sponses concerning the institute's design and con-tent. Analysis of the results indicates that the institute has met its objectives of increasing partici-pants' abilities to use the techniques, sequential steps, and CBAE strategies, and that the coaching process implemented during the year was useful to teachers. In addition, instructors found that the institute was well-designed and well-paced, but felt the quantity of techniques taught could be reduced and the material treated in greater depth. Trainers felt the opportunities for skill refinement and en-hancement were valuable. Several areas for improvement of the institute were identified. Appendixes contain the various feedback and evaluation forms used in the study. (MSE)

The argument is made that English-as-a-Se-cond-Language (ESL) educators cannot prepare students for mainstreaming in American colleges and universities if the students are limited to ESL textbooks. When teachers assign library projects, they generally neglect the vital area of bibliographic instruction because they assume that the foreign student has basic library knowledge; an assumption that is not true because many students come from countries in which library resources are nonexistent or limited. A small-group project in a high interme-diate/low advanced level reading class is described that demonstrates how students can profit from bibthat demonstrates how students can profit from bib-liographic instruction by participating in a guided research assignment. The advantages to English-as-a-Second-Language students of being assigned a library project in a reading class instead of in a writ-ing class are also explained. The project demon-strates that students benefit in the acquisition of new skills, in development of a broader perspective of contemporary issues, in cooperative group dy-namics, and in second language absorption through active use in a variety of nonclassroom contexts.

Descriptors—English, *Generative Grammar, Lan-guage Research, Linguistic Theory, *Semantics,

The notions of categorical selection (c-selection) and semantic selection (s-selection) as outlined in recent research on generative grammar are dis-cussed. The first section addresses the type of selec-tional constraint imposed on English small clauses tional constraint imposed on English small clauses (e.g., "John considers [Mary smart]"). In the second section, it is suggested that the constraint on small clauses has some crucial implications for problems of syntax and semantics involving cleft sentences or syntax and semantics involving clert sentences (e.g., "It was [under the chair] that I left my coat"), "though" attraction (e.g., "IThough John was busyle finished his homework"), and the verb "seem" (e.g., "Mary seems [honest]"). It is concluded that a promising solution to the question of how to characterize the distributions of certain types of concentrations of the distributions of certain types of concentrations of the distributions of certain types of concentrations of the distributions of the distr structions lies in semantic rather than categorical selection. EDRS Price - MF01/PC05 Plus Postage.
Descriptors—Diachronic Linguistics, Dialects, Eskimo Aleut Languages, *Language Patterns, Language Research, Linguistic Theory, *Phonology, Uncommonly Taught Languages Identifiers—*Gascon, *Metathesis
Metathesis, usually described in descriptive or historical linguistics as sporadic change is investigated.

historical linguistics as sporadic change, is investi-gated as a systematic phonological change using data from Gascon, an Occitan dialect. In the first chapter, the controversy over metathesis as a pho-nological change is presented and discussed from the standpoint of historical development. In con-trast to the view that metathesis represents mainly a phonetic output, it is argued that metathesis can be seen as a phonological process following predict-able patterns, as illustrated in different diachronic processes occurring in related dialects of Eskimo. In chapter 2, major historical and linguistic factors afng development of the Gascon dialect are presented, and early analyses of one region's Gascon are examined. The third chapter introduces the data to be analyzed and the theoretical phonological frame-work for their examination. It is argued that the generative approach does not account adequately for the occurrence of this phenomenon in Gascon. The sociolinguistic approach to rules and one nota tional system are then used to arrive at the rule account of metathesis. In chapter 4, a discussion of assimilation in Gascon leads to the argument that because assimilation is no longer productive, metathesis occurs as an alternative, supporting the pro-posed rule account. A pilot study explored the possible affective, inguistic, and strategic benefits of closed-captioned television programming for limited-English-proficient elementary school students studying English as a Second Language (ESL). Four ESL teachers were trained, and lessons and accompanying pre-and post-tests were developed based on captioned episodes from three public television series for chidren ("Sesame Street," "3-2-1 Contact," and "Reading Rainbow"). The lesson plans and tests were implemented by the four teachers in four pull-out classes that drew an initial cohort of 29 students from fourth through sixth grade classrooms. Researchers observed selected classes and met with school district staff to discuss, develop, and refine the lessons and tests. Informal observation notes the lessons and tests. Informal observation notes and observation protocols, a linguistic coding in-strument, a language learning strategy question-naire, pre- and sout-tests based on the lessons, and teacher and student interviews were used to collect data relating to the possible relationship between data relating to the possible relationship between the lessons and language learning attitudes, language acquisition, and the use and development of language learning strategies, to clarify expectations about closed-captioned television, and to guide a follow-up study. The commonalities between the teaching of writing and the teaching of English as a Second Lan-guage (ESL) are discussed. With common instructional practices of iterativeness, contextualiinstructional practices of iterativeness, contextualization, and cognition delineated between the two fields, four levels of literacy for ESL students are specified. Four levels of ability are distinguished, including: basic, intermediate, academic, and disciplinary. It is argued that establishing levels of literacy sets the construct validity of programs and clarifies their development. In addition, it is suggested that teachers of writing can best be used at the academic and disciplinary levels of literacy, where too often the task of writing instruction is left to disciplinary specialists and the focus is on princi-ples of inquiry and rhetoric. The use of writing teachers at only the lowest levels of ESL instruction is seen as too limited a view of their role. (MSE)

tional Materials, *Letters (Alphabet), Oral Lan-guage, *Pashto, Phrase Structure, Pronunciation, Second Language Instruction, Tenses (Grammar), Uncommonly Taught Languages, Units of

Study, *Vocabulary

This textbook is a component of "Beginning Pashto," a set of materials (including a student workbook, teacher's manual, glossary, and tapescripts) that teaches the Pashto language. The language taught is Afghan Pashto, particularly the standard central district dialect spoken in Kabul and in the official media. The text provides 14 units of study; each unit is approximately 10 hours of class work, and therefore, is sufficient for 2 semesters of academic language training. The first unit of study teaches the Pashto writing system and consists of the following sections: (1) Greeting and Goodby Phrases; (2) Pashto Pronunciation; (3) The Pashto Alphabet Letter Shapes; and (4) Diversions. The remaining 13 units of study present the language through dialogues and readings on various topics (e.g. food, shopping, weather, family, etc.), with accompanying presentations on grammar and vocabu-lary, and exercises for oral practice and conversation. Each unit also contains a diversion (a proverb, poem, or story) intended to amuse the stu-dent, and to provide him or her with a glimpse of Pashto folk literature. The dialogues revolve around the activities of a group of Pashtuns and Americans at an American university. The readings, for the most part, describe Pashtun life and customs in Afghanistan and are related to the topic in the corresponding dialogue. (GLR)

This textbook tapescript is a component of "Beginning Pashto," a set of materials (including a text-book, student workbook, and glossary) that teaches the Pashto language. The textbook tapescript consists of the dialogues, readings, example sentences, and vocabulary contained in the units of the Text-book, recast in tapescript form. The tapescript is designed to be of use to would-be learners of Pashto who do not have regular access to a Pashto teacher, but who want to learn something of the oral language. To make tapes from this tapescript, it is first necessary to find a native Pashto speaker who has had enough education in Afghanistan or Pakistan to read Pashto script easily. When a native speaker has been found, the contents of the tapescript can be taped for use as listening exercises. (GLR)

This glossary is a component of "Beginning Pashto," a set of materials (including a textbook, student workbook, teacher's manual, and tapes-cripts) that is designed for teaching and learning the

Pashto language. The glossary contains, in dictionary form, the vocabulary and phrases that occur in the 14 units of the 5 components of the series. Each entry provides an English translation, grammatical information (in italics), the unit or units in which the word occurs, the pronunciation in transcription (in brackets), and the Pashto spelling of the word. The words are alphabetized by their Pashto spelling. The forms of irregular nouns, adjectives, and verbs are provided in the body of the entry. Nouns are listed in the direct singular form, adjectives in the masculine direct singular form, and verbs in the present imperfect stem. (GLR)

Identifiers—*Language Contact
In a politically changing world, "languages in contact" must be redefined as "speakers of different languages in contact," and the implications for lan-guage learning and teaching must be recognized. Phenomena occurring beyond the languages them-selves should be addressed in both language instruction and the construction of language textbooks. Four significant phenomena occurring in multilin-gual contexts include: (1) linguistic condescension, or the adjustments (primarily simplification) made by a native speaker to a non-native speaker, often suggesting assumption of a lower intellectual standard; (2) language level, or command of the lan-guage appropriate to the context; (3) minorization, or being assumed to be in a lesser linguistic position or orm assumed to be it a leaser linguistic position and not allowed to express oneself; and (4) stereotyping that occurs when idioms are misinterpreted as prejudicial comments. These problems are generally, and inappropriately, ignored in second language instruction and instructional materials. (MSE)

Recent recommendations by the Furnamen Com-

Recent recommendations by the European Commission would have all secondary students in the European Community (EC) studying two EC languages other than their own. In multicultural Australia, where English is a shared language, students traina, where English is a shared language, students are encouraged to study other languages, especially "trade" languages that are also the home languages of many students; however, this policy does not yet have widespread support. The attitude is reflected in low language enrollments at the higher education level. The interdependence of economics and politics is supported in the popular press, but the inter-dependence of economic efficiency and cultural dependence of economic efficiency and cultural context is only recently gaining recognition. Australian policy on multiculturalism and immigrant employment have not evolved sufficiently yet. Australia can afford to and is beginning to shed its ambivalence and indulge in linguistic pluralism, including acceptance of the language and culture of the aboriginal population. Misinterpretations of multiculturalism and fears of lost heritage have shaped attitudes and policy too long. Inconsistency shaped attitudes and policy too long. Inconsistency in language education policy and trade policy

should also be remedied. Hasty improvisation in language program planning is unwise, but sound pol-icy based on broader perspectives and developing the full range of available human resources is necessary. (MSE)

Identifiers—*Diversity (Student)

A study examined the responses of five university

students from linguisitically diverse backgrounds to

students from linguistically diverse backgrounds to an unfamiliar essay examination task to be performed in English. Subjects were an East Indian educated entirely in English, a Korean-English bi-lingual, a Norwegian fluent in English, a black middle-class American, and an urban American. Data were drawn from interviews and think-aloud protocols collected from the undergraduates taking real essay exams. Results are presented in case-study style, with discussion addressing the differential learning and writing strategies used by each student. The findings cast doubt on some common assumptions about the essay exam strategies of culturally and linguistically diverse students, and suggest that while the essay test has value for some forms of assessment, the student's test preparation practice, assessment, the student's test preparation practice, understanding, and feelings of membership may contribute to making essay tests as inequitable a form of assessment as any other test type. Sample essay questions are appended. (MSE)

A discussion of the new Sri Lankan General Certificate of Education (GCE) O-Level standardized test of English focuses on how new ideas in testing have been implemented in the test and on their effect on classroom practice and the quality of English instruction. The discussion begins with a brief outline of the history and context in which the new exam was introduced. The second section describes the most notable features of the examination of a the most notable features of the examination of a new O-level syllabus from a practical perspective, including the test's careful integration into the school curriculum, time allocation, test construc-tion, and item types. It is concluded that based on the limited experience to date and anecdotal evi-dence, the test is having an effect on classroom prac-tice. The need for substantial additional effort in developing public and professional awareness is seen, but difficulty in implementing change is antici-pated due to limited resources. (MSE)

A study investigated the relationship of different easpects of anxiety and second language production

A study investigated the relationship of different aspects of anxiety and second language production in a relatively non-threatening oral production task. Subjects were 43 introductory psychology students who had completed grade 12 French instruction at least 1 year prior to the study who had not had any formal French instruction since then. The subjects had been supported by the subject of the subject of the subject in the subject of the subject is the subject of the subject in the subject in the subject is the subject in the subject in the subject in the subject is the subject in the subject in the subject in the subject is the subject in the subject in the subject in the subject is the subject in the subject in the subject in the subject is the subject in th were told they would do a number of oral French tests but before beginning, completed a question-naire indicating how anxious they felt at the time. In the first part of the task, the subjects were asked to name and record in French items belonging in certain categories. In the second part, they recorded their attempts at completing specific communica-tive tasks in French. After completion, subjects completed a battery of tests assessing various types of anxiety. After this, the subjects were told they would do more French tests, but again, were first administered the state anxiety measure. Subjects were then given an alternate form of the French test. Language test responses were scored for word production for categories and for grammatical accuracy in continuous speech. Results suggest that con-text-relevant anxiety, as distinct from general or situationally-aroused anxiety, plays a significant role in second language learning. A brief bibliography is appended. Descriptors—Broadcast Journalism, Discourse Analysis, *Females, Foreign Countries, *Interpersonal Communication, *Interviews, *Language Patterns, *Language Styles, *Sex Differences, Sex Pade Talevision Role, Television

Role, Television Identifiers—*Turn Taking Patterns in the speech behavior of women were examined in a number of mixed-sex and single-sex television interviews and discussions, focusing on response to male dominance. Common properties of women's speech style are attributed to their need to respond to the requirements of conversation with men and ensure conversational survival, and are seen as conversational competencies. These proper-ties, which include turn-taking and joining responses, deferential behavior, personal or semantic reference, protecting the opponent from loss of face, and making the opponent's response or agreement easier, are discussed as they occurred in mixed-sex and single-sex conversations and in conversations between individuals of different status, age, or political position. It is proposed that analysis of the pat-terns occurring in mixed-sex conversations can serve to make speakers aware of the male domination of discourse, and analysis of women's conversations can make women more aware of their competence, both processes rupturing the patriar-chal quality of discourse. Autorities his hospital

Analysis of the discourse in a minima interview with a 14-year-old, female, Australian high school student takes a feminist poststructuralist perspective, applying concepts from ethnomethodology. In the course of talking about her social world, the subject articulates two distinct discourses of adolessubject articulates two distinct tubeourses of adores-cent femininity. As an observable conversational strategy, she speaks sometimes as a quiet, intellec-tual, academically ambitious schoolgirl, the version of femininity validated by the school she attends. At other times, she comes across as the teenage girl other times, she comes across as the teenage girl who just wants to have fun, the version of femininity validated by the dance clubs she attends. While talking, the girl takes up subject positions within these contradictory discourses, valuing and discrediting both at different times. Some aspects of her speech suggest that she is seeking a validating voice outside herself, indicating a wish to hear an alternative discourse of femininity in which the brains/beauty dischotomy does not dominate the social reality of adolescent girls. Most information is still conveyed to university students through lectures. This necessitates that students have sophisticated listening and note-taking skills, and poses additional difficulties for non-na-tive students. To identify areas for improvement, science lectures in English in the Sultanate of Oman were analyzed. The relationship between the lecturwere analyzed. Ine relationship between the lecturers' method of explaining and the students' way of recording information was investigated by examining notes taken on one topic. Analysis of both course handouts and student notes revealed that many students were unaware of lecturers' cues to signal key words, and had difficulty extracting them from ongoing discourse. When students did make an effort to record important points, they used no standard abbreviations nor any form of shorthand. In almost half the cases where independent notes were made, layout was poor and relationships between made, ayout was poor and relationships between items of information were not clearly indicated, leaving an incomplete and misleading summary of the lecture. Based on the results, suggestions are offered for improving foreign students' listening and note-taking skills. (MSE)

corded conversations spoken in Spanish. Language

and topics of the exam are representative of conver-sations the Federal Bureau of Investigation routinely monitors. This test consists of two subtests, one containing 40 multiple-choice items based on eight to nine recorded conversations, and the other requiring written summaries of three recorded conversations. The LSTE-Spanish exists in two forms parallel in content, item difficulty, format, and length. The final report on the test's development is presented in four sections. The first provides a genretail description of the test, and the second describes the development of the test's two pilot forms. In the third section, the results of the trials and piloting of third section, the results of the trials and piloting of the pilot forms are presented, with descriptions of the resulting revisions. The fourth section presents the procedures and results of a study to validate the LSTE's final operational forms. Substantial ap-pended materials include selected pages of the test booklets, guidelines and forms, and pilot testing, validation, and feedback results. (MSE)

It is argued that English dictionaries currently provide evaluative information in addition to descriptive information about the words they contain, and that this aspect of dictionaries should be devel-

scriptive information about the words they contain, and that this aspect of dictionaries should be developed and expanded on. First, the historical background and distribution of the axiological parameter in English-language onomasiological dictionaries were investigated. Second, the lexical units included were investigated. Second, the lexical units included in the lexical or conceptual fields, dimensions, groups, etc. of nonmasiological dictionaries were collected and the non-primary or irrelevant lexical units were excluded. Third, alphabetically-ordered monolingual semasiological English-language dic-tionaries were used to obtain semantic definitions of the affected lexical units, including valencies and other syntactic or pragmatic information, and fourth, exhaustive specifications were made of the tourin, exhaustive specifications were made of the seemes, classemes, sememes, virtuemes, arguments, satellites, subcategorization, etc. of each affected lexical item, followed by a contrastive analysis of the units belonging to the same lexical field or di-mension. Fifth, a proposal to reorganize the tradi-tional classifications of the axiological parameter and the synoptical or ideological sections of the onomasiological dictionaries is developed. Finally, the inclusion of an axiological formula within the lexicographic definition of each lexical item is proposed and elaborated. (MSE)

ditionals

An experiment evaluated the impact of an integrated formal, analytic, and functional communica-tive approach to second language teaching in French immersion on French language proficiency. The impetus for the study arises from research indi-

cating that immersion children show persistent weaknesses in their grammatical skills despite the fluent, functional proficiency they achieve in their second language. The experimental materials con-sist of a curriculum unit focusing on the conditional sast of a curriculum unit focusing on the conditional and involving students in planning an imaginary space colony. The materials were designed to teach the conditional by providing opportunities for students to use this form in natural, communicative situations; by reinforcing their learning with systematic literative. atic linguistic games; and by encouraging metalin-guistic awareness. Pre-, post-, and follow-up tests of oral and written French were administered to grade 7 early French immersion experimental and control classes (315 students from four school districts in the metropolitan Vancouver, British Columbia). Results showed that the experimental group performed significantly higher in writing in both post- and follow-up testing. Although these results were not found for speaking, examination of the individual class data revealed greater and more consistent growth in speaking for the experimental than for the control classes. Descriptors—Adults, Discourse Analysis, Foreign Countries, *Interpersonal Communication, *Language Patterns, Language Research, Linguistic Theory, *Sex Differences, *Swedish, Uncommonly Taught Languages
Identifiers—Gender (Language), Sweden, *Tag Questions

A study investigated the use of tag questions in the private conversations of Swedish men and women. Conversations took place in single-gender dyads (six with two men and six with two women) and six mixed-gender dyads. Informants were aged approximately 25 or approximately 50, of different social classes, chosen by random selection, and asked to engage in a conversation with a friend or relative. In this corpus, 350 of the 7,785 conversational turns, or 4.5%, ended with some kind of tag. The syntactic qualities, functions, and gender differences of the use of two tag questions, "va" ("OK? Right?) and "vet du" ("You know"), were examined. It is concluded that the two tag questions have different functions in conversation and are used in different functions in conversation and are used in different two tags questions have different two tags and the two tags are the control of th ferent conversational strategies, and that their usage can never be explained out of context. It is argued can never be explained out of context. It is argued that a single variable such as tag question use can not be seen in isolation as an explanation of gender differences in language usage. The concept of conversational style is a more useful explanation. Women appeared to show more characteristics of a high-involvement style when in conversation with other women than when in conversation with their husbands. (MSE)

Connotative Dissonance in Communication

Pub Date—Apr 90
Note—28p.; Paper presented at the World Congress of Applied Linguistics sponsored by the Interna-tional Association of Applied Linguistics (9th,

tional Association of Applied Linguistics (9th, Thessaloniki, Greece, April 15-21, 1990). Pub Type—Speeches/Meeting Papers (150) EDRS Price - MF01/PC02 Plus Postage. Descriptors—Cognitive Dissonance, *Communication Problems, *Congruence (Psychology), *Interpersonal Communication, *Semantics Identifiers—*Connotations

Communication is a dynamic process, an experiment in living where man, as a social animal, en-deavors to satisfy his needs and monitor relationships. In so doing, he uses a structured com-bination of symbols, both verbal and non-verbal, to bination of symbols, both verbal and non-verbal, to foster the mutual understanding of messages. How-ever, self-concept and the sum of life experiences mitigate against an objective handling of the com-munication process. The inferences attached to messages are often rooted in an uncompromising response and give rise to dissonance. As a result, connotation represents a subtle barrier to rapport in communication because the message does not exist

independently of the communicator who observes and derives subjective meaning from it. Various factors contributing to dissonance in communication are discussed. (Author/MSE)

University (Egypt), Mansoura University
(Egypt), Tanta University (Egypt)
A study investigated the English language proficiency of English-as-a-Second-Language (ESL) student teachers in five Egyptian university schools of education. Comparisons of language proficiency education. Comparisons of language proficiency level were made between schools, and proficiency comparisons were made between schools, and profitciency comparisons were made between teachers based on instructional level (first or second year) and sex. An English proficiency test was administered to 932 subjects (347 male, 585 female) ESL student teachers. Statistical analysis of the results revealed significant differences between the schools' student proficiency levels and between instructional levels. However, no significant differences were indicated between males and females. Interactions were found between school and instructional level, instructional level and sex, and all four variables. No interaction was found between school and sex. Based on the findings, it is recommended that steps be taken to improve the English preparation of ESL student teachers. Regional faculties of education are encouraged to select better qualified applicants and not practice open admissions. In addition, it is suggested that the ministry of education and university administration assure that courses offered to this population are adequate in both quantity and quality to produce the most proficient teachers. A discussion of language teaching at the Technion Israel Institute of Technology emphasizes problems specific to the teaching of English, Hebrew, and Arabic, the main languages used in Israel. Three aspects of the program of instruction are examined. The first is the distinction between required and elective languages. English is required of all stu-dents, and Hebrew of all foreign students. Elective languages include German, French, Russian, Italian, Spanish, Arabic, and Yiddish. The second aspect is the differential goals of instruction in the various languages. Most English and some German, Russian, and French courses aim at developing the reading comprehension of scientific and technical texts for both undergraduate and graduate students, whereas other languages include active communica-tion and general literature reading among their ob-jectives. The third area of discussion involves learner problems related to the structural differences between languages (e.g., Arabic diglossia). It is concluded that learner problems arise from both language-external (i.e., institutional or administrative) factors and language interference, and that this situation exists to some extent in many Israeli insti-

This guide, designed for teachers of francophone first graders in Alberta, outlines a social studies unit on the family and provides lessons, instructional materials, and notes on classroom techniques. An introductory section describes the general purposes of the curriculum, outlines specific objectives and of the curriculum, outlines specific objectives and the unit's organization, discusses the unit's integra-tion of French language program objectives, recom-mends tests, and makes suggestions concerning student evaluation. Five lessons are then presented on the following topics: celebrating birthdays; discovering family origins and history; exploring family customs, including language and music, food, clothing, arts, and recreational activities; celebrating holidays; and putting on a fair of family customs. A number of reproducible worksheets and handouts are also included, and general and holiday-related illustrations and activity sheets are appended.

The elementary school English-as-a-Second-Language classroom can be seen as a microcosm of a pluralistic society. Different kinds of control mechanisms influence both teachers and pupils and can lead to divided loyalties. These mechanisms include classroom organization, the number of pupils, and the attitudes of pupils toward one another. It is vital to encourage development of the school's pluralism and allow competencies to emerge fully. Interaction comes to full expression in group work, and teacher-controlled grouping may be the most effective arrangement. Children should be invited to exchange ideas and express opinions about why change ideas and express opinions about why groups are formed as they are, and why pupils' per-sonalities are manifested differently. For pupils to realize that no one knows best is an important step in eliciting each individual's contribution. Traditionally, teachers have been trained to rely on knowledge based on science, which is only one kind of knowledge. Different traditions of knowledge should at least be respected on equal terms. Good teachers possess collective knowledge and skills, usually known as intuition, that are as important as methodology in the classroom. (MSE)

eotape Recordings Identifiers—*Conversational Flow, Topicality

The purpose of this paper is to account for some of the results from a contrastive study of Spanish and Danish communicative behavior, where the focus of attention has been directed towards the microlevel of discourse in order to find recurrent patterns in the local management of conversation. The use of speaker and hearer references, topic allo-cation, and topic progression are the subjects of the analysis. The data used for the analysis consist of videotapes of role-plays recorded during negotia-tion seminars arranged by Spanish and Danish training centers. It is argued that the functional value of these patterns can be explained in terms of the immediacy concept and the face-needs dimension. Based on the results of these analyses, a predic-tion is made about what might happen in a genuine intercultural setting. (VWL)

A conceptual and practical structure for designing a local native language and culture curriculum for preschool through grade 9 is presented. The first section outlines the program's philosophy, rationale, and general and specific learner expectations. and offers an overview of the suggested linguistic and cultural content of such a program. The second section more specifically describes program content for each instructional division (early childhood through grade 3, grades 4-6, and grades 7-9), includ-ing elements of traditional culture, legends, daily routines, and contemporary cultural events and ac-tivities appropriate to that level. This section also contains a list of the most common linguistic functions and notions as a frame of reference for teachers to plan lessons, chart individual student progress, and keep records of what has been taught. (A more detailed list of notions and functions is appended). Section three presents guidelines and suggestions for implementation, addressing aspects of program development and community involve-ment, issues related to aboriginal language teaching (dialect variation, literacy, and orthography), lan-guage development and communicative compe-tence, and tailoring program elements to suit local needs. This two-part guide to the evaluation of student progress in French language discusses both theoretical and practical implications. The first part consists of seven sections: (1) student evaluation; (2) the terminology of evaluation; (3) the objectives of evaluation and measurement inference; (4) the characteristics of a good learning objective, (5) taxonomic considerations in determining language competence level; (6) appropriate times for evaluation; and (7) measurement tools. The second part contains three sections. The first of these draws parallels between instructional practices and formative evaluation. The second discusses the "performance threshold," and the third provides practical information about gathering information for formative evaluation. This section also includes a series of grids for recording student data, each with a somewhat different assess ment focus and accompanied by suggestions for use or adaptation. A one-page bibliography is included. Appended materials consist of information charts to supplement the discussions in the text. (MSE)

Identifiers—Language Minorities, *Texas
This discussion focuses on the use of appropriate
and equitable tests for the screening and placement and equitable tests for the screening and placement of language-minority students. It is proposed that evidence on the impact of testing on Hispanics indicates a relationship between testing practices and the benefits derived or not derived from the students' experience with public education. Public school testing programs determine access to special programs, the nature of instruction received, and the degree of segregation under which instruction is

received. Test scores are often used to prematurely push students into an all-English curriculum. Labeling and assignment to special programs are seen as limiting student opportunities. It is concluded that the testing program as currently implemented in Texas does not simply provide an objective record of varying student outcomes, but actually contrib-utes to putting students at risk of dropping out. Several areas of future research are suggested, including descriptive statistics of the limited-English-proficient population, district instructional practices and policies, and the success of current state policy.

This dictionary contains a word list of 10,993 English-French cognates (words with the same or similar spelling and meaning in both languages), including some loan words from other languages. A systematic review of the Larousse "Dictionnaire Moderne Francais-Anglais" (1960) provided this list of cognates. Deceptive cognates, or words which have the same spelling in the two languages but different meanings, were noted in the Larousse dic-tionary, but in order to ensure that no deceptive tionary, but in order to ensure that no acceptive cognate was contained in the list, "Les Faux Amis" (1946) by Koessler and Derocquigny and Seward's "Dictionary of French Deceptive Cognates" (1947) were compared with the word list. For words with only partial congruence of meaning, congruent meanings or contexts of similarity are specified. False or deceptive cognates are not included. An introductory section describes the methods used to compile the dictionary and offers a discussion of the occurrence and utility of cognates in general. The word list itself is alphabetical, from French to English, with cognate frequency ratings and their sources noted in some cases. Appendixes list the words frequency-rated in each of three sources. The history of French immersion instruction in The history of French immersion instruction in Canada is reviewed, and the literature relating to that history is examined. The first chapter offers three distinct perspectives on the emergence of French immersion: (1) chronological; (2) phenomenological and pragmatic; and (3) methodological and pedagogic. Also in the first chapter, the immersion instruction situations in the United States and Europe are profiled for comparison. The second chapter contains a bibliography of 409 citations, most annotated, on French immersion in Canada. The bibliography covers the period 1968-88. Chap-ter 3 is a commentary on the bibliography, focusing on the following aspects of the field: research and implementation, the net results of French immersion, the strengths and limits of program evaluation, the weaknesses of immersion, and the debate between immersion partisans and adversaries. A concluding chapter addresses the theoretical and practical issues separately and makes recommendations for future research. A list of references is included. Appended materials include a letter concerning the origin of the term "immersion," data on immersion program offerings in each province, and a list of association acronyms and addresses. (MSE)

In the last four decades, many of the studies on contrastive linguistics have been intended for and directed to second language teachers, on the as-sumption that a major problem in language learning arises from interference caused by structural differences in the native and target languages. However, this effort has had little impact on the textbooks, methodology, or classroom practice of second language teaching. Factors in this failure include the following: (1) the large number of strong, attractive innovations proposed to the profession; (2) a trend toward exclusive use of the target language in instruction; and (3) use of native speakers with no knowledge of the students' native language, making contrastive analysis impossible. With the now pressing need for deeper relations between members of the European Community, translation is gaining ground and contrastive linguistics may follow suit. Contrastive linguistics can be an efficient tool to aid in second language teaching and learning, comple-menting other methods and approaches. (MSE)

The development of computer courseware for Danish high school students of intermediate French Danish nigh school students of intermediate Frience is described. Five areas are addressed. First, the hardware and capabilities of the computer are noted. Second, the traditional methods of Danish second language instruction are outlined, focusing on the role of oral communication and written text in the classroom. Third, the nature of listening comprehension and its implications for classroom language instruction are discussed. The fourth area addressed is the relationship between listening comprehension and language acquisition, looking more closely at the notion that student recognition of knowledge gaps and the ability to find information to fill them is essential to language learning. Finally, the exercise itself is described. Its text consists of an interview with a young Algerian girl discussing as-pects of female liberation. The users listen to the text, and can read the text on the screen while they listen. Questions relating to different topics in the text follow. Students may refer to the oral or written text if necessary, and may consult a computerized dictionary of the vocabulary used. The exercise is being pilot tested. (MSE)

Identifiers—*Czechoslovakia

A classroom activity for developing oral commu-nication in English as a Second Language is de-scribed as it was used in a Czechoslovakian postsecondary technical institute. The four intermediate level courses in which the technique was used were based on a communicative model. During the first half of each course, students learned to adapt to more informal teaching styles, with less teacher domination. A highly successful activity involved switching discussion from "public" topics to stories deriving from personal experiences. Each student brought a photograph showing something of per-sonal importance or drew their own "snapshots." The students then listed key vocabulary with which to tell a story about the picture. Because of what the pictures do not or can not show, an information gap is created that leads to efforts for more genuine communication. The incomplete information causes the students to become more motivated to find out about the situation and how it was resolved. Other exercises in lifewriting followed, using specific topics as assignments. Student abilities as artists and storytellers emerged in the classroom, which in turn developed their oral communication skills, self-confidence, and sense of identity. (MSE)

A review of the literature on strategies used by

A review of the literature on strategies used by students to learn a second language suggests that the research can offer important insights into teaching learners who do not naturally arrive at successful learning strategies. Raising students' consciousness to the options for language learning is seen as crucial. It is also proposed that learner training involves a shift from the view that the teacher and the method are responsible for learner success to a persective that features a the learner's obtained as spective that focuses on the learner's ultimate respective that tocuses on the tearners unimate re-sponsibility for a successful learning experience. Examples of strategies used successfully for attend-ing, speaking, vocabulary learning, reading, and writing are cited as evidence that research has just begun to identify what learners actually do during the learning process. It is concluded that it is not yet clear how generalizable such strategies are in the face of individual student differences, nor how learners should be trained to learn. (MSE)

A school situation was studied in which students of English as a Second Language (ESL) were not developing English communicative competence be-cause ESL students were segregated from fluent English-speaking (FES) students. ESL students were having difficulties with English reading, writing, and math concepts. In response to this situation a program of communicative language teaching (CLT) was established. The program, undertaken as a practicum, had the following goals, to: (1) develop communicative language competence among ESL second graders; (2) increase social interaction be-tween ESL and FES second grade children; and (3) develop better understanding of the English lan-guage and culture among all second graders. The program involved directed activities in the regular classroom, including lessons about food, family life, school life, art, pets, illness, games, and music, cul-minating with a multicultural night of songs, skits, dance, and food. The results were positive, with data analysis suggesting that a CLT program in the regu-lar classroom contributed to both communicative competence in ESL students and social cohesiveness among all of the students. This paper is concerned with the different ways that gender is represented in the English-as-a-for-eign-language (EFL) classroom, and how this repreeign-language (ET.) classroom, and now this representation may contribute to the socialization of female language learners. Attention is focused primarily on the language teacher's understanding and awareness of gender representations, not to specific teacher actions. The analysis looks at: (1) the context of ESL instruction, often in places where little or no other English is heard; (2) the fact that most language teachers are female; (3) the materials used for instruction; and (4) instructional processes, in-cluding teacher behavior and interaction methodology (pair and group work). It is concluded that the ogy that and group works; it is concluded that the ways that western textbooks represent gender, the ambivalence of some pedagogical grammars over new, progressive language items, the messages con-veyed by instructional materials and classrooms to female learners about language use, and the oppor-tunities they seem to distribute unfairly, do not maximally facilitate language learning for women

and girls. (MSE) ED 323 808

A discussion of the transfer of first language (L1) skills to second language (L2) learning focuses on the development of this transfer in second language reading instruction. A program integrating L1 and L2 study skills is outlined. First, the common components of the L1 syllabus are examined, including reading strategies, language-universal reading skills, and language-specific reading skills. Issues of the degree of L1 reading skill transferability and the linguistic threshold for transfer are addressed, drawing on research in the field. Attention is given to the relationship between language-specific reading

skills and the realization of universal reading skills. It is proposed that any program integrating L1 and L2 reading skills be developed cooperatively by reading specialists in both languages to ascertain the macro-strategies underlying each language's specific reading skills. The program described consists of two autonomous but integrated study skill syllabuses, one taught in each language. In the lower buses, one taught in each language. In the lower grades, learning strategies applicable to reading are introduced with other learning strategies. In early middle grades, formal L2 instruction and language-specific reading skills are introduced. From the earliest stages of L2 acquisition, basic reading strategies are readily transferred. Benefits of this approach are seen to extend into content-area learn-

In learning a language as a means of communica-tion, children must first coin new word-forms to express meanings for words they do not yet know. Children learn at an early age that lexicon can be used creatively, and that creativity is not simply a matter of learning which word-paradigms are available in the language, but also learning adult conven-tions on the uses of word-forms that carry these meanings. In an analysis of innovations in children learning Czech as their first language, both the meanings of lexical innovations and the forms used to convey these innovations are considered. One focal point is the child's behavior in a situation when tocal point is toc entid's behavior in a situation when a new reality must be labeled. The following ap-proaches seem to be the most common: (1) the child coins a completely novel naming unit that has no connection with those existing in adult language; (2) the child replaces the yet unknown naming unit by one already familiar; (3) the child provides the already mastered naming unit with a new meaning; (4) the child resorts to various modifications of already existing naming units. dance, Benavior Fatterns, Comparative Analysis, Foreign Countries, *Language Enrollment, *Learning Motivation, *Second Language Learn-ing, *Student Motivation, Surveys The components of motivation in foreign lan-

angage (FL) learning are examined as well as the effect of those components on certain language learning behaviors. Two basic assumptions are derived from the results of the study. These include the following: (1) Motivation in FL learning contexts (e.g., learning English in Hungary) is different in some ways from motivation in second language consisting secretars. acquisition contexts (e.g., learning English in the United States); and (2) language learning is a series of diverse learning behaviors rather than a uniform process. In the first part of the research a motivation questionnaire was designed and administered to 134 young adult language learners. Based on the results of the questionnaire, a motivation construct was postulated that is believed to be valid for FL learning contexts in general. In the second part of the survey, the effects of motivation on four criterion measures, course achievement, course attendance, extracurricular language use, and further enrollment, were investigated. Finally, the results obtained from beginner and intermediate students were compared to determine whether there were any significant differences in terms of their motivation. Based on the results of this survey, a theoreti-

cal construct of motivation in FL learning was postulated, consisting of: (1) an instrumental motiva-tional subsystem; (2) a multi-faceted integrative motivational subsystem; (3) need for achievement; and (4) attributions about past failures. (JL)

This paper is based on research that aims to provide evidence of which approach, contrastive analysis (CA) or error analysis (EA), is more adequate in

sis (CA) or error analysis (EA), is more adequate in dealing with errors in tense formation and usage made by Greek learners of English. A contrastive analysis of the English and Greek tense systems, providing points of correspondence and divergence etween them, is used as a basis for predicting difficulties that Greek learners will experience in mas-tering English tenses. The data obtained and analyzed for this study came from a diagnostic test analyzed for this study came from a diagnostic test designed to elicit a range of target structures admin-istered to secondary school students who had had 4 years of English. The test was based on the predicted points of interference and facilitation and aimed at investigating whether the predictions made were valid. The results obtained reveal that both CA and EA have a vital role to play. A dual approach provides a better guide to language teaching and learning. (JL)

This study explored the age variable within the framework of Stephen Krashen's (1973, 1977, 1978, 1981, 1982) monitor hypothesis. The experiment conducted two types of English language lessons based on antithetical pedagogical strategies. The first aimed at the activation of monitor use, con-structed around formal learning tasks and the sec-ond aimed at the avoidance of monitor activation, constructed around formal label tasks labeled, for constructed around formal inshel tasks tabeled, for the purpose of this experiment, "with monitor" and "without monitor." The lessons were taught to two classes of each of the following age levels: 8-9 years (3rd grade), 11-12 years (7rd grade), and 18-19 years (last year of high school). To one class of each age level, the target structure was presented using the strategies of the without monitor lesson. The same structure was presented to the other class using the with monitor lesson. After two days, the same test was administered to both groups. Results indicated that the older students were superior in level of foreign language attainment. It is suggested that the older students fare better when taught with strategies that exploit the activation of monitor use. The type of teaching strategy does not seem to influence language attainment in younger students. (JL)

Program

The guide contains a competency-based English-as-a-Second-Language/literacy curriculum, in-cluding coordinated lesson plans for three instructional levels (beginning, intermediate, preliteracy) and an employability counseling component. The curriculum is arranged in an order reflecting the job search process. The competencies in the curriculum are the objectives of the lesson plans. The curriculum also contains the instructional matrails used in the lessons, and supplementary materials. A variety of competency-based texts are used within each level. The beginning level provides basic information on looking for a job. The six broad topics for this level are: personal identification and communication; transportation; job search; apply-ing for a job; forms on the job; and health and safety. ing for a job; forms on the job; and neath and sate-up. Lesson plans cover job types, want ads, maps and schedules, application forms, interviews, time sheets, and paychecks. Intermediate level content builds on this material, and topics include personal identification and communication, job search, job application, forms, and workplace behavior. Lessons cover telephone skills, applications, educa-tion/training information, making appointments, writing a resume, workplace layouts, and interper-sonal relationships on the job. The preliteracy level reinforces visual discrimination, reading, and writing skills, with attention given to readiness. Personal identification and communication, employment, transportation, and community resources and health are general topics. (MSE) (Adjunct ERIC Clearinghouse on Literacy Education)

This manual accompanies a four-part videocas-sette series. Each unit follows a Hispanic man in his quest for a job, focusing on four aspects of the job seeking process, including identifying a job opening, calling about it, the interview, and the first day at work. The series can be used with high beginning to intermediate students. The videotapes are to be used with a separate curriculum guide. This instuctor's guide provides instructors with a complete script of the scenes enacted in the videos and reference sections containing specific vocabulary, func-tions, and grammatical structures. Each script is followed by a vocabulary list that differentiates between job-related and general terminology. Informal expressions and casual language are exemplified under "fidoms," and more formal equivalents are also given. A list of the linguistic functions performed by "Jose" and his companions is provided. Various grammatical structures have been extracted from the videotape conversations and catalogued according to tense. However, because of the focus on competencies, grammar is not emphasized. Each unit ends with five different types of exercises (true/false, sequencing, multiple choice, matching, and paragraph completion) that can be duplicated for student use. Language and culture shape the meanings that are attached to experience and to text. Yet, it is often believed that literacy work can be standardized and formalized, industrialized and normalized, as if adult new readers constructed meaning differently from proficient readers. Workplace literacy pro-grams too often teach the employer's meaning and family literacy programs teach the schools' meanraminy interacy programs teach the schools mean-ings, pressuring learners to accept the interpreta-tions of the dominant group. When literacy programs help students come to know and reflect on their own meanings, they help students come into their own power-instrumental, personal, and political Standardization is seen as necessary to accountability. It is easy to tell whether students are learning what they need and want to learn by asking them to read, write, or talk about what they have learned. In the midst of pressure to systematize and homogenize, we must learn to personalize. Respect for cultural and linguistic background is not simply a matter of motivating, titillating, interesting, re-cruiting, or retaining. It has to do with dignity, power, strength, and authority. Development, *Literacy Education, Program Evaluation, *Refugees, Skill Development Identifiers—*Enhanced Skills Training Program,

*Multiple Wage Earner Program
An evaluation of the Multiple Wage Earner
(MWE) discretionary grant program and Enhanced (MWE) discretionary grant program and Enhanced Skills Training (EST) program developed by the De-partment of Health and Human Services is reported. The EST program was intended to reach hard-to-employ refugees through improvement of the quality of jobs available to refugees experiencing difficulties becoming self-sufficient, and the MWE program was designed to encourage all potential wage earners within a household to enter the labor market. The study's major conclusions include the wage earners within a nousenoid to enter the labor market. The study's major conclusions include the following: (1) many of the discretionary projects failed to recruit and/or enroll appropriate clients, as a result of a variety of factors; (2) contrary to requirements, the primary EST service strategy was direct placement after them placement after them. direct placement rather than placement after training, and the primary MWE strategy was short-term classroom skills training with subsequent entry-level job placement, instead of enriched support serlevel job placement, instead of enriched support services and immediate job placement; (3) in most cases, EST projects did not succeed in placing participants in well paid jobs; and (4) MWE programs were successful in placing underserved individuals in entry-level jobs. Project profiles are appended. (MSE) (Adjunct ERIC Clearinghouse on Literacy

The power of Black women is discussed in terms.

The power of Black women is discussed in terms of their progress in society so far, their current pre-dicaments, and possibilities for the future. The progress of Black women is seen in their survival, the greater numbers of Black women in nontraditional roles, and the competence and qualities with which they perform in those roles. Four predica-ments are seen in the current situation for Black women: (1) Black female-headed households live in poverty not because they are headed by females, but because Black women and children often live in poverty with or without a male present; the issue is not household arrangements, but inequality based on gender, race and class; (2) integration has failed Black women; (3) the women's movement has been relatively silent on Black women's empowerment; and (4) affirmative action in higher education has not worked for Black women and the assumption that Black women are readily marketable because they are both black and female is a myth. Possibilities are seen in the motivation to overcome social class boundaries, the cultural experiences that allow for greater role flexibility and sharing of responsibil-ities among men and women, and the affinity of Black women with other people of color in the Third World as well as in the United States. Amid correct demands that society fulfill the promise of the Constitution, Black women must advocate for their own empowerment. Contains 42 references. (KM)

Six articles on recruitment and retention of black students are presented that cite dropping out as the factor most responsible for significantly impeding minority access to and successful progress in the collegiate experience. Increasingly, retention is be-coming the ultimate yardstick for measuring institutional effectiveness, which translates into m how colleges perform their crucial role of helping both academically talented and underprepared students alike to succeed. The articles are as follows:
"Creating and Achieving Excellence: Laying the Foundation for Successful Recruitment and Retention of Black Students" (Harold W. Lundy and tion of Black Students" (Harold W. Lundy and Glends F. Carter); "Cognitive Styles and Multicul-tural Populations" (James A. Anderson); "Project Far: A Blueprint for College Student Retention" (Rebecca T. Gates); "Teaching Problem Solving in General Chemistry at a Minority Institution" (J. W. Carmichael, Joanne Bauer, and Donald Robinson); Models of Community Resources for the Enhance

ment of Black Student Retention" (David W. Hoard); and "Financial Aid and Tuition: Factors Contributing to the Decline of Black Student Enrollment in Higher Education" (Glenda F. Carter).

Identifiers—*National Collegiate Athletic Associa-

An examination is made into the eroding financial health of intercollegiate athletic programs, espe-cially at the Division I level of the National Collegiate Athletic Association (NCAA), that was determined to have come about as a product of standard practices and policies. The question posed is, if Division I college sports have become a large commercial enterprise, what then is the condition of commercial enterprise, what then is the condition or these programs as measured by standards of busi-ness practice? It is found that university varsity pro-grams, instead of being net revenue producers, were net revenue users and not self-supporting. Tradi-tional revenue sources (ticket sales, television, douonai revenue sources (ticket saies, tereision, do-nations) are chronically short in generating enough income to support costly intercollegiate programs. During periods of rising costs, Division I athlic directors want to increase these revenues instead of decreasing costs; since revenues are already difficult decreasing costs; since revenues are already difficult to increase appreciably, there is quickly created a revenue/cost gap. These same problems found in Division I-AA are also growing in Division I-A programs. The most popular method of closing the revenue/cost gap is to increase donor solicitation. A need for universities to rethink the incorporated "athletic associations" within their institutions is due (GLR). due. (GLR)

Descriptors—College Faculty, Higher Education, *Job Satisfaction, *Minority Groups, National Surveys, *Sex Differences, *Teacher Attitudes, *Tenured Faculty
The overall study examined job satisfaction among tenured college faculty. This paper compares responses from minority (about 6%) and female (about 18%) faculty with the overall responses (N=1135). Overall, 91% reported being satisfied with their careers with 82% saying they would choose the career again. Race and gender were not related significantly to overall satisfaction. Minority faculty tended to have been at their institutions less time than white colleagues but were more likely to time than white colleagues but were more likely to than white conceques on were mixely to have decided to become a professor out of a desire to help others. In all, minorities gave significantly different responses to 26 of the 132 comparisons. Female faculty gave significantly different responses to 65 (49%) of the responses. Among the many differences found between men and women respondents were that: women had spent less time at their institution, less time in rank, and less time in tenured positions. They tended to be at the lower ranks and to concentrate in the professional disciplines rather than the natural sciences. Women also had spent a higher percentage of their time teaching and less doing research and rated themselves as bet-ter teachers and worse researchers. Women were more dissatisfied with their physical working condi-

The study examined early tuition-guarantee programs for disadvantaged students to determine their

grams for disadvantaged students to determine their characteristics, key issues, and effectiveness. The study found four different types of programs: (1) sponsorship programs in which one individual or organization provides intensive academic help, mentoring, and other services to a small, broadbased group of students; (2) "last-dollar" programs which guarantee students the remaining assistance needed to attend postsecondary school after all other sources of assistance have been exhausted; (3) university-based programs which guarantee admission and tuition at a particular institution and also offer services while students complete high school; (4) "pay-for-grades" programs in which a donor offer services while students complete high school; (4) "pay-for-grades" programs in which a donor provides few services but puts modest funds, based on students' grades, into accounts for use later in paying higher education expenses. The study showed that in 1988-89 at least 42,496 students were involved in tuition guarantee programs with 2,884 students now receiving postsecondary education tuition benefits. The report found a lack of data concerning program effectiveness. Appended are suggestions for evaluation data collection and design. (DB)

A content analysis identified the issues discussed by 39 advisors (mostly white faculty and administrators) with two cohorts of black freshmen at Towson State University (TSU), Maryland. Advisees were 95 black females and 40 black males in two freshmen classes. Advisors met with each subject at freshmen classes. Advisors met with each subject at least once every 2 weeks and kept a record of issues discussed. Students completed a "Student Satisfac-tion Questionnaire" during both fall and spring se-mesters. Findings indicated that some social issues were not talked about due to student reluctance to were not tanked about que to student reductance to initiate these discussions, especially when related to race. Financial aid was also rarely discussed. Topics discussed were grouped into the following catego-ries; registration/scheduling, selection of major and major area advising, course advisement, on/off campus employment, referral to other services on campus employment, reterral to other services on campus, issues surrounding enrollment at TSU, liv-ing conditions/personal issues, extracurricular ac-tivities, financial questions, retention program issues, and questionnaires and standardized tests. Topics most frequently discussed were course ad-visement, referral to other services, and registration and scheduling. (DB)

The report, based on data from the first National Postsecondary Student Aid Study (1986), describes the combinations of student aid awards or student aid "packages" received by federally-aided students to finance their educations in 1986-87. The narrative discussion presents the results in a question-and-answer format, including such findings as uon-and-answer rormat, including such findings as the following: about one-third of all recipients were awarded only a Pell Grant or a Guaranteed Student Loan; two-thirds received packages; typical aid packages differed by type and control of post-secondary institutions; reliance on Guaranteed Stu-dent Loans increased as the level of familie insects. dent Loans increased as the level of family income increased; 30% of federally-aided students received campus-based federal aid; and 24% of federalyaided students also received institutional aid. The aided students also received institutional aid. The major portion of the document provides detailed results in tabular or graphic format covering such areas as: distribution of federal, state, and institutional aid packages by type and control of institution; distribution of federal, state, and institutional aid packages by level of family income; average federal aid awards for dependent/independent undergraduate student recipients; and profiles of the three most common student aid packages by income level. Additional tables are provided in the appendix. (DB)

The paper describes four major patterns that emerge in studies of college student intellectual development. Quotations from students' writing about their epistemological beliefs and quotations from professors' writing concerning their courses and stu-dents are related to the four patterns. Characteris-tics of student writing associated with each developmental pattern are presented along with il-lustrative examples. The four patterns are: (1) enter-ing the academic world-dualism and received ing the academic world-dualism and received knowing (writing may focus on facts, and opinions may be fairly dogmatic); (2) multiplicity and subjec-tive knowing (writing may express opinions without concern for persuasion); (3) relativism and proce-dural knowledge (writing may well provide a con-text for the reader, including opposing viewpoints, but often does not include a definite position on the subject); and (4) commitment in relativism and con-structed knowing (writing is likely to be a mature structed knowing (writing is likely to be a mature blending of logic, empathy, and ethical concern that is neither moralistic nor simplistic). The document is netter indicated in the state of the two more advanced positions among college undergraduates and the danger implicit in "commitment" assignments in encouraging premature solidification of student opinions. Includes 12 references. (DB)

Development, *Program Evaluation, Program Implementation, *Student Educational Objectives, *Testing

The paper examines varieties of program assessment in institutions of higher education and proposes a procedure to implement systematic assessment of program outcomes. Presented in a assessment of program outcomes. Presented in a question-and-answer format, the paper first adversees common faculty concerns about formal assessment in sections titled, "Why Not Use GPA (Grade Point Average)" and "Isn't Placement Our Best Indicator?" Assessment development and implementation are addressed in answers to the following questions: How much will this cost? How do we get started? Will standardized exams assess what we teach? Will local exams be any good? Will students cooperate in assessment? Will my work be recognized? How much time will this take? and What good will assessment do? The paper stress the importance of: viewing assessment as a priority for everyone within the institution; building assessfor everyone within the institution; building assess-ment into established procedures (such as curriculum review, strategic planning, and peer review); and rewarding faculty and students for their in-volvement in assessment. Includes seven references.

Identifiers-Performance Funding, *Tennessee The paper addresses issues concerned with increasing state interest in encouraging public institucreasing state interest in encouraging public institu-tions of higher education to demonstrate educational quality through outcomes assessment and reports on the development and implementa-tion of Tennessee's program of performance fund-ing. Emphasis is on guidelines contained within a 5-year performance funding program implemented in 1983. Standards were developed for five performance funding areas, including accreditation, program field evaluation, outcomes of the general education curriculum, referent group surveys, and planning for instructional improvement. A survey of 23 Tennessee institutions during the last year of the 23 Tennessee institutions during the last year of the first funding cycle identified strengths and weak-nesses associated with each of the funding areas, such as percentage of programs accredited, use of peer review, and use of a comprehensive field exam in major fields. Ninety-five percent of the institu-tions considered the impact of performance funding. to be beneficial. The most favorable reactions were related to availability of improved institution-specific information from surveys, faculty involvement in test development, and the impetus to use the data in planning for improvement. The most negative reactions were related to the weight given to exam performance and the use of accreditation as an indicator of program quality. Includes 6 references.

Groups, Outcomes of Education, *Program Effectiveness, Program Implementation, Remedial Instruction, State Programs, Student Educational Objectives, Student Financial Aid Identifiers—*New York
The article examines the impact of New York
State's Higher Education Opportunity Program
(HEOP) after 13 years of implementation at 70 institutions, focusing on the effects of participation by underprepared, low-income students. Considered also are college admission and enrollment policies, academic support services, and budgets. The study analyzed results of questionnaires and interviews with 37 HEOP program directors, as well as data from annual reports of the State Education Depart-ment and participating colleges. Positive findings included HEOP's clarity of mission and well-deincluded HEOP's clarity of mission and well-de-fined student population; the heightened awareness achieved by compensatory programs and availabil-ity of financial aid; and more efficient and imagina-tive coordination of federal, state, and institutional funding sources. Eight recommendations address the need for continued funding of opportunity programs, replicating programs and services that improve achievement, more systematic efforts in working with public schools to improve college preparation, utilization of the literature on instructionally effective schools, and development of stud-ies to obtain follow-up data on HEOP alumni. Aid, *Student Loan Programs Identifiers—*Guaranteed Student Loan Program This paper examines the problem of determining how effective student aid programs have been in promoting the college enrollment of lower income and disadvantaged students and analyzes the institutional means through which federal aid policies have been implemented. The importance of considering the key role of state and institutional re-sponses to federal policies is stressed. The document discusses: enrollment effects of student aid, strategic Congressional choices, student aid versus insti-tutional aid, tax credits versus aid expenditures, and guaranteed loans versus a loan bank. It is concluded that the decentralized, market-based approach of that the decentralized, market-based approach of portable need-based grants has worked rather well, but the decentralized, market-based approach of running the loan program through banks has not worked well. Other successful features in student aid were Congressional decisions relying on student rather than institutional aid and on expenditures. over tax credits; unsuccessful features included the over tax credits; insuccessful returns included the Congressional decision to adopt a guarantee mecha-nism in the Guaranteed Student Loan (GSL) pro-gram. Finally, policy implications are identified, including the basic reconstruction of the GSL program, examination of various schemes to subsidize student costs through the tax side rather than the expenditure side of the budget, and rejection of a proposed legally mandated needs analysis system. Discussant comments by Ronald B. Hoskins and C. Mark Lawton are included. (DB) ED 323 835 HE 023 815

Identifiers-*New York

The document presents three tables detailing New York college enrollment data for fall 1989. Definitions of seven basic terms as used in the tables (e.g., degree-credit enrollment and full-time/part-time) precede the tables. Table 1 provides data on degree-credit enrollment and first-time students in in-stitutions of higher eduction by level of program and institutional classification. Types of institutions for which data are presented in this table include State University of New York, City University of New York, independent, proprietary, two-year, four-year, and graduate institutions. Table 2 presents de-gree-credit enrollment and first-time students in ingree-credit enrollment and first-time students in institutions of higher education by level of program and institution. In this table data on full- and part-time enrollment for undergraduate, first-professional, and graduate students are presented for each college or university in the State. The third table identifies degree-credit enrollment trends in institutions of higher education by sector. In this table comparative data are presented from fall 1980 of fall 1989 with both absolute enrollment figures. to fall 1989 with both absolute enrollment figures and percent of state total provided. Identifiers—*Donor Characteristics, Southern Illi-nois University Carbondale

This study examined alumni giving as related to undergraduate involvement, student housing, academic success, and satisfaction with the education received. Two hundred alumni donors from Southern Illinois University at Carbondale's College of Education were surveyed, with a 70% response rate. The study found that alumni donors had not been as involved in extra-curricular activities as non-donors and that on-campus residence halls and community rental units had been the most common housing arrangements, though an unexpectedly high percent of respondents indicated they had lived with their parents or at home and commuted. The study also revealed that alumni donors reported average to above average academic success as undergraduates and were highly satisfied with the education received. Overall, the two factors clearly related to giving were academic achievement and satisfaction with education received. Includes 50 references. (DB)

Identifiers-First Amendment

The pamphlet addresses the application of the United States Constitution's First Amendment to offensive expression and expressive conduct, particularly by students, at public colleges and universi-ties. Sections 1 through 4 summarize applicable First Amendment principles including the breadth of the First Amendment; exceptions to content-based speech restrictions (e.g., incitement to imminent lawlessness, "fighting words," defamation, obscenity, intentional infliction of emotional distress); academic freedom; and other legal considerations academic freedom; and other legal considerations (e.g., content-neutral regulation of expressive activity, state constitutional law, federal and state civil rights laws). Section 5 applies these principles to seven hypothetical examples. A brief discussion of each example is provided to illustrate federal constitutional issues. Specific court cases are referenced.

grees, *Degrees (Academic), Doctoral Degrees, *Educational Trends, Higher Education, Masters Degrees, Private Colleges, Public Colleges, Statis-tical Data, *Trend Analysis Identifiers—*Virginia

The report summarizes data on degrees conferred y Virginia's colleges and universities in the 1980's by viginia s conges and universities in the 1900's in tabular, graphic, and narrative formats. Highlights are identified in a preliminary section and include: degrees awarded at public institutions increased 20% during the 1980's; degrees in liberal arts and general studies accounted for most of the arts and general studies accounted for most of the growth in associate degrees awarded by community colleges; the number of bachelor's degrees rose by 18% at public institutions and 26% at private institutions; there was a 135% increase in master's degrees awarded by private institutions (and only a 14% increase in master's degrees awarded by public institutions); the number of first professional degrees has a constant since 1982; doctorates remained relatively constant since 1982; doctorates awarded by public universities rose nearly 50%; business and management continue to be the most popular undergraduate degrees; although under-graduate degrees declined by 17% in the physical sciences and 27% in the biological sciences, both these fields increased the number of doctorates awarded; mathematics gained at all degree levels, including a gain of 25% for bachelor's degrees; few doctorates were awarded in some fields which expect critical faculty shortages, including social sciences, letters, business and management, and foreign languages. Identifiers—Bethel Theological Seminary MN
The Bethel Theological Seminary (St. Paul, Minnesota) sought to analyze the viability of the curriculum for ministers and persons in related occupations, and to consider an outcomes-based approach to curriculum restructuring. A model was developed to assess the effectiveness of seminary curricula in light of the realities of ministry among practicing clergy. Development of the model involved a survey to identify the tasks and time utilization of practicing clergy. Steps in the model included: develop cross-discipline agreement on

outcomes to be sought; seek feedback from alumni, pastors, and denominational leaders; meet with pas-tors for integration focus group interaction; revise outcomes statements and develop a recommendaton for faculty review; develop a recommenda-tion for faculty review; develop objectives, instruc-tional strategies, and testing procedures to support the achievement of outcomes; implement the re-vised curriculum, test its effectiveness, and use eval-uation data to refine the effectiveness of the core curriculum. The survey of 807 pastors, with 86% responding, gathered data on attitudes toward ministry and the functions of ministry. Factor analysis was used to determine the relative importance of categories of ministerial effectiveness, such as personal spiritual faith and integrity, outreach, counseling, and Christian compassion. Ministers also rated their level of involvement in counseling, preaching, evangelism, worship, education, administration, in-formation, and personal development activities. (JDD)

Two Decades of Planning in Latin American Universities: Trends and Perspectives.

Pub Date-Dec 89

Pub Date—Dec 89

Note—15p.; Paper presented at the Latin American Studies Association International Congress (15th, Miami, FL, December 4-6, 1989).
Pub Type—Speeches/Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.
Descriptors—*College Planning, College Role, Developing Nations, Educational Practices, *Educational Trends, Higher Education, 'Institutional Environment, 'Latin American History, Models, Organizational Change, Organizational Climate, Social Influences, Trend Analysis, Universities The paper provides a framework for identifying trends in planning in Latin American universities for the last 20 years. Identification of the planning trends is based on two main dimensions: the purpose of the relationship between universities and the ex-

of the relationship between universities and the external environment (organization-centered versus society-centered), and the degree by which the external environment imposes its will on the univer-sity (deterministic versus voluntaristic). Possible interactions between the two dimensions result in four main types under which university planning can be classified: deterministic society-centered; voluntaristic society-centers; deterministic organi-zation-centered; and voluntaristic organization-centered. Based on this framework, the publications resulting from three conferences on university plan-ning conducted by the Union of Latin American Universities were analyzed. One of the most predominant ideas about university planning was found to be the "social actor" or voluntaristic society-centered perspective. It is concluded that some new aspects in Latin American higher education could eventually force the predominant planning discourse into a more organization-centered one. Includes 21 references. The monograph provides a systematic explication of the underlying standards and principles that have been developed to help adult learners articula's what they know and can do, to clarify their claims to creditable achievement, to help assessors im-prove the reliability of assessment, and to save as-sessor time. Ten academic and administrative standards for quality assurance in assessing prior learning for credit are discussed. The academic standards are relevant to the assessment process itself; the administrative standards are related to the administrative context in which the assessment and the award of credit occur. The monograph is divided into the following areas of discussion: definitions, propositions, and assumptions; standards for assessing learning; principles and procedures for sponsored learning; principles and procedures for assessing prior experiential learning; administrative measures to safeguard quality assurance; and mis-conceptions and malpractice. An appendix contains principle and procedure checklists and lists of accrediting associations and experiential learning organizations. Contains 13 references. (GLR)

State College

This report presents a picture of the emerging mentor role, its concomitant satisfactions, and problem areas, based on interviews with and obs tions of 46 full-time mentors at Empire State College (Saratoga Springs, New York); completion of the Mentor Questionnaire by 38 mentors; and interviews with deans, associate deans, and support staff at four regional learning centers. A description of Empire State College as the setting precedes an analysis of the characteristics of mentors and examimation of their daily activities. Emerging roles are explored in relation to advisement, intellectual de-velopment, evaluation, professional development, and college development. Problem areas are also discussed, focusing on mentors' concerns about their role in decisionmaking and concerns about workload. A theory is proposed which suggests that mentors progress in five stages of development: anti-traditional; estrangement; personal confrontation; turnaround; and commitment. An appendix contains a copy of the mentor questionnaire, and a bibliography of approximately 75 items concludes the report. (JDD)

As institutional research or outcome assessment becomes more commonplace in institutions of higher education, the issue of what opportunities this presents to researchers desiring to move past relatively routine reporting into the more creative aspects of the profession becomes more prominent. Several possible roles emerge as a result of the as-sessment implementation process: Implementation Team Coordinator; Institutional Planner; Depart-mental Activity Facilitator; and Assessment Data Gatherer. Each role varies in its attractiveness in assisting professional development and what is usually expected from individuals within these roles. Of particular interest are the two most common roles the institutional researcher will be asked to play in terms of institutional effectiveness and outcomes assessment: the Assessment Data-Gatherer Role and the Institutional Planner Role. Also included are two assessment matrixes: one is an example of an assessment plan for an accounting department and the other is a matrix showing whose responsibility it is to provide data, what type of data, and for which departments or services. East (Mexico), Mexico

A program successful in developing the teaching skills of both experienced and new faculty members at The Autonomous University of the North East (Universidad Autonoma del Noreste) at Saltillo, Coahuila, Mexico, is described. The program has incorporated several literature-based features of effective programs: presentation of supportive theory of skills, demonstration of competencies, practice in simulated and actual settings, structured and open-ended feedback, coaching for application, inopen-ended feedback, coaching for application, in-dividualization, incentives for participation, and ad-ministrative support. The program involves four 1-day seminars, beginning with an induction pro-gram and followed by planning for teaching and developing the course syllabus, use of teaching strat-egies and evaluation of learning, and assessment of teaching. Lectures, discussions, collaborative learning, role playing, small group activities, individual practice, and microteaching are employed. Nine ref-erences are included. Appendices contain objectives and schedules for program presentations. (JDD)

Textual information, 32 tables, and 12 figures are Textual information, 32 tables, and 12 figures are used to describe Alaska high school seniors in this 12th annual survey report. During the fall of the 1988-89 school year, 3,254 seniors attending Alaska public and private high schools responded to the questionnaire sent to a total of 5,910 students for a return rate of 55.1 percent. The questionnaire covered demographic characteristics (sex, race, primary home language, income, etc.); a description of the high school experiences of the student (evaluathe high school experiences of the student (evalua-tion of school experiences and identification of possible areas of weakness); a description of the educational experiences of the student in specific educational experiences of the student in specific target disciplines (foreign languages and comput-ers); the postsecondary plans of the respondent (oc-cupational choices, choice of college, and comparison between seniors planning and seniors not planning postsecondary education); and more detailed representation of those respondents planning to pursue postsecondary education (state of attendance, Alaska attendance, reasons for institu-tional choice, familiarity with financial aid, and plans to return to Alaska). Appendices contain copy of the survey form and data tables. (JDD)

This report consists of chapter 8 (the chapter on nursing) and relevant other sections of the "Seventh Report to the President and Congress on the Status of Health Personnel in the United States, March of Health Personnel in the United States, March 1990." It presents and analyzes recent developments in the education, supply, and distribution of nursing personnel; and provides an assessment of the future supply of and requirements for nursing personnel through the year 2020. An executive summary of the full health personnel report is included. In the reprint of chapter 8 from the full report, a section on current developments in nursing education addresses issues in basic nursing education addresses issues in basic nursing education to prepare for registered nurse (RN) licensure, post-RN academic nursing education, costs of educating nursing students, and programs preparing practical nurses. A discussion of current developments in the registered nurse population examines the registered nurse supply, nurse immigrants, geo-graphic distribution of registered nurses, and distri-bution of nursing personnel within the health care system. Two final sections discuss, respectively, rates of compensation and the outlook for the fu-ture. Other relevant sections of the full report that are reprinted here include the introduction, an over view of major personnel developments for all health personnel, and current and emerging health person-nel issues. Includes a total of 34 references. (JDD)

Plans, "Skill Development, "Teacher Education, "Teaching Methods, "Teaching Skills Syllabi, lesson plans, and activities are offered from courses designed to improve the preparation of doctoral candidates bound for college teaching careers. The three graduate-level courses include: (1) Course Design Decisions, which covers evaluating teaching and learning styles, designing syllabi and examinations, selecting textbooks, determining reading and course content, and developing individual lessons; (2) Generic College Teaching Skills, which examines lecturing, group discussions, questioning strategies, models for effective teaching, feedback for learning, and evaluation of teaching; and (3) Culture of the Academic Enterprise, in which students select and discuss topics/issues as they relate to their major field and as they relate to they relate to their major field and as they relate to the university setting. This third course examines ethical and moral issues, advising students, organi-zational policies, academic freedom, tenure, obtaining a teaching position, publishing and grantsmanship, professionalism, and conflict of interest. The materials include excerpts from books and journal articles, assessment instruments such as the Teacher Behaviors Inventory and the My-ers-Briggs Type Inventory, and a 43-item reading list. (JDD)

tude Test

A study was conducted to examine the relatio A study was conducted to examine the relationship between the Scholastic Aptitude Test (SAT) scores of freshmen entering Brenau College in Georgia and the likelihood of graduation from the institution. The basic research question was: Do proportionately more students entering Brenau with combined SAT scores at or above 800 persist to condustion at Brenau as compared to students entering. graduation at Brenau as compared to students enter-ing with combined SATs below 800? The subjects were entering freshmen during the fall quarter for each of the years 1980 through 1983. The findings of the study revealed a statistically significant difference in graduation rate with proportionately more students entering with SAT composite scores at or above 800 persisting to graduation. However, the results were considered in relation to the data showing 51% of students admitted as freshmen during the ing 31% of students admitted as treshmen during the years under study achieved less than 800 on the SAT, and 45% of freshmen who graduated in those classes came from the "below 800" SAT category. Recommendations included the following: (1) develop a study skills course for entering freshmen; (2) seedant fault, workshops, encouraging teaching. conduct faculty workshops encouraging teaching

strategies and program planning to support the stu-dents enrolled; and (3) adjust in admission and recruiting strategies to emphasize Brenau's academic support system. Contains 20 references. (GLR)

The study surveyed 134 institutions to determine if significant differences existed between public reis significant distretences existed between public re-search and doctorate-granting universities concern-ing: (1) the most important external environmental areas to sen; and (2) the scanning activities that provide the most information for planning pro-cesses. A total of 105 responses (78%) was received, composed of 60 research and 45 doctorate-granting universities. While it was found that strategic planning is a major topic on university campuses today, environmental scanning is presently implemented at barely over half of public research and doctor-ate-granting institutions. No significant difference was found in the amount of time spent scanning between research institutions and doctorate-grant-ing institutions. Also, there was no significant difference found to exist between public research and doctorate-granting institutions as to which areas of the environment are important to scan, whether formally or informally. Although not significant, informal scanners at doctorate-granting institutions spend a larger percentage of time scanning the educational/competitive organizations area than do their counterparts at research institutions. Additionally, there was no correlation between the length of time universities have employed environmental scanning and their satisfaction with the process. Currently, the dissemination of environmental scanning information at public research and doctorate-granting universities is low. The survey form is appended. The document contains 32 references.

As more adults seek higher education, colleges and universities are advised not to ignore this fast growing segment of new students. The issue of developing a non-traditional bachelor's degree pro-gram for adults is addressed through an examination gram for adults is addressed through an examination of seven guidelines that are suggested to facilitate the process. The guidelines discussed are as follows: (1) know the target student population; (2) recognize the significance of faculty involvement in the program design; (3) aim to reflect the quality of traditional programs in the quality of a non-traditional degree program; (4) ensure that students selected match the resources available and the mission of the institution; (5) look for appropriate advocates for the program; (6) develop a program which reflects andragogical/collaborative as well as pedagogical principles; and (7) "Mainstream" the adult learners to demonstrate their achievements to the college and the community. The frequent occurrences of athletic scandals in colleges and universities prompted a study whose purpose was to examine faculty opinions about athletes at schools which compete at Division 1-A NCAA (National Collegiate Athletic Association) schools. Specifically, the study sought to: (1) describe the opinions of academic faculty members of Division 1-A schools toward athletes; and (2) determine if a relationship exists between these faculty opinions and the quality of academic support stu-dent athletes receive at their respective institutions. Also, the study attempted to investigate the frequency and types of attempts to influence students athletes grades. Eighteen institutions were selected and 1,350 faculty were given a 46-item questionnaire to assess their opinions; response rates ranged from 29% to 71%. The results showed that faculty largely rejected a major role in the academic welfare of athletes and were resolute in resisting pressure to provide special academic benefits. Though faculty appeared to believe they do have influence, evidence from the study indicated no apparent impact of faculty opinion on academic assistance for athletes at the institutions surveyed. Contains five references. (GLR)

The monograph examines the literature of the last decade on the rise and role of the Chief Information Officer (CIO) in higher education, business, and health care and reports results of a 1989 survey of higher education CIOs. After a discussion of the nighter education CIOs. After a discussion of the origins of the CIO position and concept, chapter 2 presents a survey of the literature, primarily since 1985. Noted are the large number of perspective pieces, the relatively few surveys of CIOs, and the lack of differentiation between CIO title and functions. tion. The findings of the survey of CIOs (N=58) in higher education are reported in terms of the CIO profile; CIO organizations; CIO functions, characprofile; CIO organizations; CIO functions, characteristics, and activities; CIO salaries; trends and issues; and other findings. Notable findings included: self-reported management styles tend to be similar and people-oriented; individuals in the position are relatively happy; CIOs see strategic planning for information technology as part of their role; there was little mention of evaluation activities by CIOs. The fourth chapter presents conclusions comparing survey findings with the literature and offering personal observations. Amproximately, 150 references sonal observations. Approximately 150 references are included. The CIO survey questionnaire and results and a profile of the study's corporate sponsor are included. (DB)

Much of the literature in general education is focused on the design or the contents of education
roserams or the "sunoply side." while little attention

programs, or the "supply side," while little attention has been given to students' understandings of and attitudes toward general education, the "demand side." This paper reviews literature on the "demand side" of general education by first providing a brief synopsis of the notion of general education and re-cent recommendations for reform, and next summa-rizing research on student knowledge of and rizing research on student knowledge or and attitudes toward higher education and general edu-cation. The paper also considers processes used in higher education to affect demand side questions, including teaching, recruitment and admissions, orientation, academic and career advising, and course scheduling. Three primary strategies for data collection were used: (1) a national advisory group was identified whose members contributed to a pool of information on student perceptions of general edu-cation; (2) a network of more than 25 educational leaders was contacted for information and opinions; and (3) a literature search was undertaken. Appendixes list members of the advisory group and names of education leaders consulted, as well as providing information on the research methodology; and 77 references are included. (JDD)

Identifiers—"Higher Education Assistance Foundation, *Stafford Student Loan Program

This statement of the Director of Education and Employment Issues of the General Accounting Of-fice's Human Resources Division discusses how the Employment issues of the ceneral Accounting Office's Human Resources Division discusses how the Stafford Student Loan program works, the growth in loans guaranteed and defaulted, and the concerns surrounding the financial problems being experienced by the Higher Education Assistance Foundation (HEAF). The Stafford program consists of Stafford loans, Parent Loans for Undergraduate Students, and Supplemental Loans for Students, which together represent 61% of federal student aid for postsecondary education made available in fiscal year 1990. The program involves five parties: students; schools; lenders; guaranty agencies, and the Department of Education. The amount of new loans guaranteed increased 33% from 1983 to 1989, while defaults increased 352% from \$444 million to \$2\$ billion. Default costs (payments to guaranty agencies) have risen from about 10% of total program costs in fiscal year 1980 to 36% in 1989. HEAF is the largest guarantor in the Stafford program and the bienest ever of default colsin to lander. Bike the largest guarantor in the Stafford program a the biggest payer of default claims to lenders. Risks faced by lenders, the Student Loan Marketing Asso-ciation, and the federal government if HEAF be-comes insolvent are noted. A flow chart depicts the life of a Stafford loan. (JDD)

Trend Analysis
Identifiers—Environmental Scanning
A step-by-step approach is provided for developing an environmental scanning system for colleges and universities to assist them in planning for the future. The objectives of such a system are to detect social, scientific, economic, technical, and political interactions important to the organization; define potential threats and opportunities from these de-

velopments; promote a future orientation in management and staff; and alert management and staff to trends which are converging, diverging, speeding up, slowing down, or interacting. Each developmen up, slowing down, or interacting. Each developmental step required in creating an ongoing envircemental scanning program is reviewed; these are: (1) the development of a program structure, i.e., the literature review needed, personnel to do the scanning, and types of available information resources; (2) developing a comprehensive taxonomy, including an electronic filing system; (3) identifying and assigning information resources; (4) securing scanners; and (5) training scanners and abstractors. It is noted that incorporating a systematic environment. noted that incorporating a systematic environmen-tal scanning system process should enable decision makers to anticipate what is happening in the state, region, nation, and world, and, correspondingly, to plan more effectively. Contains 18 references. (GLR)

Identifiers—Strategic Planning
This handbook for institutional researchers focuses on describing methods and techniques for conducting and merging external and internal analyses in order to produce an expanded vision of alter-native future environments. Such vision is needed for the formulation of strategic long-range plans. Section 1 begins with a discussion of how an internal analysis is conducted. The components of such an analysis are a review of the current organizational mission, identification of critical performance indi-cators, and identification of organizational strengths and weaknesses. Section 2 (external analysis) focuses first on how to identify the most critical trends that define the context within which the organiza-tion will function in the future, then on how to identify potential events that, if they occurred, would affect those trends or the organization directly. In addition, forecasting trend levels and event probabilities and the impacts of both are reviewed, as well as a description of how to interrelate trends and events in cross-impact analysis and how to assess their effects on critical performance indicators. Sec-tion 3 gives details on how to analyze scenarios in order to derive their implications for policy analysis, described in section 4. An appendix is included which is designed to enhance discussion of the text, such as a group facilitator's guide, an article on envi-ronmental scanning activities, and sample pages from an environmental scanner's notebook. Con-tains 151 references. (GLR)

Identifiers-University of North Carolina Chapel

Two freshman classes and two senior classes at the University of North Carolina (UNC) at Chapel Hill were surveyed with the College Student Experi-ences Questionnaire (CSEQ). The data showed that high levels of student/faculty contact coincided with high student scores on quality of effort mea-sures. It is noted that this may be due to the contact, or it may be that those students who exert a great deal of personal effort involve faculty in their stud-ies. CSEQ research also indicated that quality of effort scales significantly predicted achievement in key areas of student development and added signifi-cantly to the prediction of student success when included with other measures in statistical evaluations. Students generally saw the faculty as supportive and available. When compared to a national composite group, UNC students scored higher on the faculty contact scale. Includes one reference.

Hill The Cooperative Institutional Research Program (CIRP) survey and a locally developed follow-up instrument were administered to students at the instrument were administered to students at the University of North Carolina at Chapel Hill. The survey was completed by 264 students in the senior class of 1983 out of a sample size of 500 students; all of these students had completed the initial CIRP survey as 1984 entering freshmen. The CIRP survey was completed by 3,300 members of the freshman class of 1984, and 3,235 students in the freshman class of 1988. Seniors reported more liberal political interests than either of the two freshman groups. Seniors rated six life objectives 10 percentage points more important than either freshman group: influmore important tash either resuman group; intu-encing social values; raising a family; having admin-istrative responsibility for the work of others; helping others who are in difficulty; participating in a community action program; and helping to pro-mote racial understanding. Seniors also rated three objectives five percentage points higher: creating artistic work; becoming involved in programs to clean up the environment; and keeping up to date with political affairs. This report, the third in a biennial series, provides a picture of the current situation and recent trends concerning the availability, cost, and condition of research space, capital spending, and condition of research space, capital spending, and sources of support for research facilities at universities and colleges. The survey data are based on both quantitative and qualitative assessments provided by 253 academic research institutions, including 29 historically black colleges and universities. Followhistorically black colleges and universities. Follow-ing an executive summary and an introduction, chapters discuss: (1) trends in the overall amount of research space available in science and engineering disciplines and differences between institutional disciplines and differences between institutional types and among science/engineering disciplines; (2) costs and square footage associated with repair/renovation and new construction of research facilities for projects initiated in 1986-89 and for planned projects; (3) sources of funds for these projects, emphasizing the differences between public and private institutions; (4) qualitative information, including institution assessments of the condition of their research facilities, the adequacy of the amount of re-search space, the adequacy of selected infrastructure aspects of facilities, and the amount of deferred repair/renovation; and (5) findings for historically black colleges and universities. Twenty-five tables, 7 charts, and 13 figures graphirecally support the text. Appendices contain technical notes, a list of sampled institutions, the survey questionnaire, and detailed statistical tables. (JDD)

secondary Education, Universities Identifiers—United States

Three position papers, originally presented at a special symposium of economists and educators, are presented concerning the policy impact that the changing economic environment will have on colleges and universities in the financing of higher eduteges and universities in the Imancing of night edu-cation in the United States. The position papers are: "The University and the Reemergence of Economic Individualism" (Lawrence B. Lindsey); "The U.S. Economy and Higher Education" (Richard S. Eck-aus); and "Higher Education in a Changing Environment: Some Scholarly and Economic Imperatives" (Harold T. Shapiro). In addition, these papers are assessed and interpreted by several of today's recognized authorities in higher education. Their presentations and commentaries focus on the understanding of the relationship between the macroeconomy and higher education and in recognizing the need to begin preparing for necessary changes that will impact the economic (and academic) health of America's institutions of higher education. The Task Force on Global Biodiversity of the Na-

The Task Force on Global Biodiversity of the National Science Board is charged with developing a course of action for the National Science Foundation to follow to promote responsible management of global biological diversity. Effective management of the problem is hampered by a shortage of systematic biologista-scientists who identify, document, and classify living things. A study was conducted to gather information on systematic biology training and personnel to gauge the magnitude and severity of the shortfall of scientists. The survey collected information on the 1988-89 academic year from institutions with graduate-level systematic biology information on the 1988-89 academic year from institutions with graduate-level systematic biology programs. All 168 doctorate-granting institutions (108 public and 60 private institutions) in the United States were surveyed. A total of 108 institutions reported that they currently train graduate students in systematic biology. The survey collected information on the following: departments training graduate students in systematic biology, and department composition: numbers of graduate students, postdoctoral fellows, faculty members, and degree recipients in systematic biology; distribution of personnel by minority group membership, citizenship, sonnel by minority group membership, citizenship, and developing country status; major disciplinary approach within systematic biology; sources and amounts of support for study and research; need for types of employment positions in systematic biology; faculty vacancies in biology and in systematic biology; and probable areas of future faculty hiring. writing (Composition)
This survey examined trends in enrollments in undergraduate humanities courses. The survey gathered information from 481 (out of 494) colleges and universities about course offerings and enrollment in fall 1988 for full-time and part-time undergraduate students in six subjects: English and American literature, foreign languages and litera-tures, history, philosophy, religion, and English composition. Data were combined with fall 1980 and fall 1985 data to allow comparisons of enroll-ments across time. During the period from 1980 to 1988, undergraduate humanities enrollments grew at a slightly greater pace than total undergraduate enrollment. Most frequent course offerings at two-year colleges were composition/writing, remetwo-year colleges were composition/writing, remedial/developmental composition, English and American literature, and history. Most frequent course offerings at four-year colleges and universities were English and American literature, composition/writing. history, foreign languages and literatures, and philosophy. Except for English composition, enrollments per 100 students in four-year colleges were higher in private schools than in public schools. Appendices contain detailed tables, technical notes, and a copy of the survey questionnaire. (JDD) naire. (JDD)

This study was undertaken to obtain reliable national estimates of enrollments of undergraduates in

humanities courses and to assess changes in enroll-ments from 1980 to 1985. The survey collected data from a sample of 453 (out of 493) colleges and unifrom a sample of 453 (out of 493) colleges and universities on enrollment figures for full-time and part-time undergraduate students in eight general humanities subjects: English composition, English and American literature, foreign languages and literatures, history, philosophy, religion, history/appreciation of the arts, and interdisciplinary humanities. The survey found that humanities courses were offered at the great majority of American colleges and universities in the fall of 1985. The most frequently offered courses were composition/writing, history, English and American literature, and foreign languages and literatures. In general, enrollments per 100 students were highest in baccalurate colleges, private schools, and small schools, laureate colleges, private schools, and small schools, and lowest in two-year colleges. Humanities enrollments per 100 students were fairly stable from 1980 to 1985. (JDD)

Identifiers-American College Testing Program The report examines progress made over the last 20 years in expanding the opportunities for educational attainment of young adults from different family income backgrounds. Based on data from published reports of the Census Bureau, the study examined high school graduation, college matricu-lation, and baccalaureate degree attainment rates for 18- to 24-year-olds from the four quartiles of the family income distribution over the last two dec-ades. The results are detailed for males, females, Whites, Blacks, Hispanics, and by public/private collegiate enrollment, and full-time/part-time status. The study reports very large differences in educational progress between students from low and high family income backgrounds, and these disparities are viewed as being persistent, pervasive, and growing. Data presented in numerous figures and tables provide information in many areas including: (1) marriage and high school graduation; (2) college participation of unmarried high school graduates; (3) baccalaureate degree attainment; (4) college participation behaviors; (5) enrollment by status; and (6) college participation rates by gender, race, and ethnicity. Other reports of the American College Testing reports are also listed. (GLR)

Identifiers—*Airway Science Program, Federal Aviation Administration
This paper examines why the Airway Science Program, initiated by the Federal Aviation Administration (FAA) to develop college-educated and technically prepared personnel for FAA employment (primarily for air traffic control), has failed to meet its work force goals. Research data were gathered from interviews with Airway Science Program. ered from interviews with Airway Science Program coordinators at 20 of the 32 colleges and universities coordinators at 20 of the 32 colleges and universities participating in the program. The survey found that program coordinators felt that the FAA and the University Aviation Association should be more open-minded toward the needs of the participating institutions and designate more responsibility for courseasum, designs to the institutions. Useful concurriculum design to the institutions. Heavily curriculum design to the institutions. Heavily emphasized concerns were the failure of the FAA to provide the promised number of jobs to program graduates, and the lack of adequate funding of the program and inequitable distribution of funds. The majority of coordinators felt that students preferred other academic avistics to receive the control of other academic aviation programs over the Airway Science Program, and coordinators reported more difficulty in attracting new students for the program than for other academic programs. Eight recomendations are made to improve the effectiveness of the program. Includes 16 references. (JDD)

The federal Guaranteed Student Loan programs provide low-interest, long-term loans to students with demonstrated financial need to help them pay for their postsecondary education. The number of loan defaults and the associated federal costs are increasing; this handbook is an effort to protect students, increase accountability, and reduce default costs. The handbook offers postsecondary institutions, lenders, guarantee agencies, accrediting agencies, and states practical suggestions to reduce defaults. The handbook discusses the problem of the rising cost of student loan defaults and examines which students default and why. Individual chanters which students default and why. Individual chapters then address what postsecondary institutions, lend-ers, guarantee agencies, accrediting agencies, and states can do and what the Federal Government's responsibilities are. It profiles organizations that have employed interesting and innovative ap-proaches to reducing defaults, in the hope that their proacnes to reducing detautis, in the nope that their strategies might stimulate others. Appendices out-line borrowers' rights and responsibilities, ramifica-tions of default, a sample repayment table, sample budget worksheets, options for repayment, and a glossary. (JDD)

Identifiers—University of Maryland College Park
A questionnaire administered to 124 international
students who matriculated at the University of Maryland, College Park (UMCP) in fall 1987 ited responses on the students' secondary school activities, personal and educational goals, difficulactivities, personal and educational goals, difficulties expected in achieving their academic and vocational goals, and their attitudes toward the University. More than two-thirds of the respondents were male, and the majority (58%) identified themselves as Asian. Most of the goals listed were themselves as Asian. Most of the goals listed were related to academics. The average age was 25 years; almost all expected to receive graduate degrees and 60% expected to pursue doctoral degrees. Almost half of the respondents said they decided to attend UMCP because the University offered the kind of academic program they wanted. Students were certain about their own strengths and weaknesses; perceived themselves to be not easily discouraged; and reported that they needed assistance in learning how to budget their time efficiently, achieve satisfactory grades, and earn expenses for school. Students expressed interest in participating in intramural sport programs, academic clubs, and music and drama organizations. Includes 11 references. (JDD)

Identifiers—High School and Beyond (NCES)
The General Accounting Office reviewed 18 relevant studies and analyzed existing data from the High School and Beyond Survey of 58,728 students to determine students' and parents' knowledge of federal financial aid for postsecondary education. It was found that students and parents knew very little about financial aid and held erroneous views about financial aid and school costs. Additionally, there was found to be a relation between a family's income and educational level and its level of awareness of federal financial aid: low-income families knew more about Pell Grants and high-income families knew more about loans. Higher educational in-stitutions were found to be the primary source of information about financial aid for most students and parents, followed by informal sources such as family and friends. In addition, studies showed that ts from families with knowledge of financial aid at the time the students were in high school were far more likely to apply for aid. Academic ability, high school grades, family income, and motivation to continue education were seen as more highly related to postsecondary attendance than was knowledge of financial aid. Prior awareness of the availability of financial aid can be part of a chain of influences leading to completion of additional schooling. Contains 19 references. (GLR)

A survey was conducted to identify college-spon-sored programs that involved undergraduate or graduate college students working with preschool, elementary, or secondary school students either as tutors or mentors. Such programs were found in 29% of all two-year and four-year colleges and uni-

versities. Of 3,212 total institutions, 921 sponsored at least one program. The survey gathered data on program focus (whether mentoring or tutoring), ber of students served, program size, distribution of college participants, participation in 1987-88 compared with 1986-87, students waiting for tutors/mentors, program sponsorship, program affilia-tion, length of program operation, agencies with which programs work, characteristics of partici-pants, program staff, preservice training, transporta-tion, time spent tutoring and mentoring, usual number of students per tutor/mentor, incentives for participation, sources of funding, and evaluation. The survey found that the primary focus was tutoring for two-thirds of the programs, mentoring for 17%, and diagnostic evaluation, respite care, or other primary focus, for the remaining 16%. Appendices contain detailed tables, technical notes, and the survey questionnaire. (JDD)

The Task Force on Literature of the San Francisco State University Commission on Human Relacisco State University Commission on Human Rela-tions conducted a literature search on human relations and discrimination issues on United States college campuses. Sources included the ERIC data-base, DATATIMES, "Chronicle of Higher Educabase, DATATIMES, "Chronicle of Higher Educa-tion," local newspapers, Knight-Ridder wire service reports, and college commission reports. The Task Force found significant gaps in major research areas concerning such topics as discrimination of the dis-abled. Included in this report are lists of identified resources (with over 100 citations from the ERIC database), many with annotations. The scope of the literature search included racial discrimination, eth-nic discrimination, set discrimination, and religious nic discrimination, sex discrimination, and religious discrimination. Almost 40 sample news reports are also included, mostly from the San Francisco State University "Golden Gater" and the "San Francisco Chronicle." (JDD)

This report presents the concepts and issues discussed at a Regional Symposium on Long-term Planning in Higher Education held in Dhaka, Bangladesh, September 21-30, 1986. Chapter 1 explores some fundamental issues about the rationale for the objectives of long-term planning. It defines long-term planning in higher education, considers its desirable characteristics, and discusses why it is needed in higher education. Chapter 2 considers the needed in higher education. Chapter 2 considers the status of and broad trends in long-term planning of higher education in the region. Attention is given to the types of agencies responsible for higher education planning, arrangements for co-ordinating and integrating such planning with national planning, special problems, and constraints to implementa-tion. Chapter 3 provides a regional overview of re-cent planning approaches and experience. Chapter 4 explores the relevance and application of particu-lar approaches, methodologies, and techniques to the task of long-term planning in higher education. Organizational and management issues related to long-term planning are considered in the fifth chap-Organizational and management issues related to long-term planning are considered in the fifth chapter. The final chapter presents conclusions, including possible follow-up activities proposed by countries of the Asia/Pacific region. An appendix provides a list of participants. (GLR)

The first chapter provides a broad overview, both current and historical, of the complex structure of higher education in

cal, of the complex structure of higher education in Australia and identifies issues and concerns. Chapter 2 examines enrollment trends in different fields of study. The third chapter looks at educational access for disadvantaged groups such as Aboriginal students as well as issues involving gender and so-cioeconomic status. Further chapters examine: (1) the nature of post graduate study in Australia; (2) the debate over tuition and fees; (3) the use of inputs as a measure of higher education quality; and (4) assessing the processes at work in higher education (e.g., staff development and teaching and learning improvement) as an indication of the quality of an institution. In addition, three factors relating to the quality of education are discussed: student selectivity; instructional efficiency; and staffing rigidity. Fi-nally, the study explores the following areas: higher education institution's role in research, continuing education, and community service; the unit costs of higher education in Australia; cost management issues; the problems of resource allocation and available financing; and higher education policy and its effect on equity, quality, and cost. Identifiers—*Napier Polytechnic of Edinburgh (Scotland), Scotland

The paper describes a critical peer review developed at Napier Polytechnic (NP) of Edinburgh, Scotland for the evaluation and monitoring of its courses. Illustrations of the system are based on the accounting courses offered by the Department of accounting and Law. The paper first describes the creation of NP from an amagamation of two colleges in 1974. Next, the development of the peer

review system itself is outlined. The necessity of accountability and quality assurance became apparent when the numbers of students and courses increased. An explanation of how the system evolved is presented. The Boards of Studies reports which had little or no course critique led to the develop-ment of Faculty Sub-Committees, and to improved communication between the sub-committees and the Faculty Board and Course Co-Ordinators regarding the annual monitoring and evaluation of the faculty's courses. Finally, a critical appraisal of the professional studies approach is provided, as well as the impact it had on the polytechnic. Case studies from the Department of Accounting and Law are presented. This document contains an index, an appendix (Council for National Academic Awards reports), and five references. (GLR)

An international research team examines California's system of postsecondary and higher education. In particular, the examination seeks answers on how California maintains educational quality, access, and equality while working with the market and the state in developing educational solutions to political, social, and economic problems. Part 1 of the report provides analyses and questions on how the state, in practice, can manage and finance the edu-cational requirements, particularly in the context of the future demographic composition of the state (large inflows of immigrants), that stem from the constant need for highly-qualified manpower that is demanded in a technology-based economy. A bibli-ography of 50 items is included. Part 2 provides a record of the review meeting within the education committee, including replies to the examiners' ques-tions. Part 3 reproduces a summary of the back-ground report prepared for the review by the California Postsecondary Education Commission ti-tled "Preparing for the Twenty-First Century: A Report on Higher Education in California." Teaching Methods
A comprehensive how-to guide is presented to help in developing individualized instruction for adult learners. The guide provides information on planning, organizing, and implementing an effective personalized process for instructing adults to help them achieve their full learning potential. The monograph is divided into three parts: Part 1, consisting of five chapters, helps instructors decide when it is appropriate to use individualized ap-

proaches in Teaching. Part 2 describes some of the fundamentals that must be mastered in order to individualize instructional efforts. Part 3 provides insight into how to successfully use the individualizing process in different settings and with various audiences. The monograph concludes with a resource section providing supplemental material on various topics. This section is divided into two parts: Resource A is intended for the reader who is looking for materials or examples that can be adapted for immediate use with learners; and Re-source B presents more advanced information which is based on current research into adult teaching and learning and covers such topics as self-directed learning, learning styles, the physical learning environment, and needs assessment. Contains name and subject indexes and 434 references. (GLR)

Note—13p.; Paper presented at the Annual Meeting of the Eastern Educational Research Association (Clearwater Beach, FL, February 15-18,

Pub Type— Speeches/Meeting Papers (150) EDRS Price - MF01/PC01 Plus Postage. Descriptors—Academic Deans, Administrator At-titudes, Administrator Characteristics, *Administitudes, Administrator Characteristics, *Administrator Effectiveness, Administrator Role, Collegality, Department Heads, Educational Resources, Faculty Development, Financial Support, Higher Education, *Institutional Characteristics, Interpersonal Communication, Leadership Styles, Professional Development, *Resource Allocation, *Supervisory Methods This descriptive study surveyed deans (N = 142), department chairs (N = 392), and faculty (N = 1173) to examine their perceptions of the relationship between resource adequacy within institutions of higher education and administrators' management styles. The clusters of variables examined were: (1) management style use of communi-

ined were: (1) management style (use of communi-cation and participation as techniques); (2) funding for professional development (travel expenses for conferences, equipment and book purchases, etc.); and (3) institutional characteristics (student populations, highest degree offered, affiliation). Study results indicated that perceptions of resource adequacy are more closely related to the institu-tional environment within which faculty work than to administrative management styles; an open management style did not necessarily translate into greater funding for professional development. In ad-dition, the institution's characteristics largely determined resource availability and adequacy, which suggests that bright scholars will be excluded from pursuing their scholarly goals if they are not at the "right" institution. Contains 16 references. (GLR)

Descriptors—Audience Response, Classroom Research, "Classrooms, Classroom Techniques, College Faculty, Higher Education, Interviews, Job Satisfaction, "Large Group Instruction, Lecture Method, "Teacher Attitudes, "Teacher Effectiveness, Teaching Assistants, "Teaching Methods Identifiers—University of Southern California A questionnaire survey was used at Southern California University, Berkeley in which 140 faculty members gave their opinions about the problems and pleasures in teaching large lecture classes (minimum 100 students). Faculty members were also queried about their practices in dealing successfully with problems and their recommendations for administrative action. The three most common teaching problems identified were: the diversity of ministrative action. The three most common teaching problems identified were: the diversity of students' levels of ability (47%); knowing how well students are understanding (41%); and the low level of student reading and writing abilities (39%). The three most common non-teaching problems identified were: dealing with incompletes, make-up exams, or grade change requests (40%); too few teaching assistants (TAs) (36%); and unreliable equipment (28%). The efficient use of faculty time and the large numbers of students exposed to high-quality teaching and senior faculty members were viewed as the benefits of large classes. The faculty gained personal satisfaction from lecturing large numbers of students. Among the recommendations were: (1) provide funding for more TAs; (2) set an enrollment limit in lecture classes; (3) develop teaching idea packets for large classes; and (4) provide instructors of large classes with lighter teaching loads. An appendix provides the questionnaire and the frequency distribution of responses. (GLR)

Descriptors—Career Development, "College Faculty, Comparative Analysis, Cooperation, Faculty Development, Higher Education, "Individual Development Landlettung Disciplinar Los Satisfactions and Comparative April Processing Los Satisfactions and Comparative April Processing Los Satisfactions (1988). velopment, Intellectual Disciplines, Job Satisfaction, Older Adults, *Self Evaluation (Individuals), *Teacher Attitudes, Teacher Characteristics, Teacher Morale

A total of 1,135 senior faculty from 6 institutions of higher education responded to a questionnaire designed to determine the relationships between personal and career development for senior college faculty and the similarities and differences in satis-faction among faculty from various disciplines. Refaction among faculty from various disciplines. Re-sponses from the questionnaire showed that aging faculty remain internally controlled, vital, and pro-ductive while being active in areas of teaching, scholarship, and service. Level of satisfaction was not shown to vary significantly by race, gender, or academic discipline. Senior faculty did not want to give up their jobs and leave academia, and most did not want to leave their present institutions. Senior faculty also tended to rate their abilities as high faculty also tended to rate their abilities as high in teaching, scholarship, and service; felt more vital and committed to their work than ever before; and would choose an academic career if they could make the decision again. Additionally, recognition from administrators was found to be a good predic-tor of faculty satisfaction. Faculty profiles were de-veloped for major disciplines. Contains 20 references. (GLR)

This special report briefly presents information about innovative programs targeted toward at-risk youth in the United States that are provided by many institutional members of the American Association of State Colleges and Universities (AASCU). Twelve model programs out of 250 were selected for the report. Among the issues the pro-grams address are: health education; high school grams address are nearth evolution, major school completion; mentoring; job training; early child-hood education; faculty development and teacher training; parental involvement; and community partnerships. The twelve programs are listed with the program's name, institution, program descrip-tion, and contact. In addition, the report discusses barriers to successful strategies that hinder program creation and provides AASCU recommendations and implications for a national policy designed to help at-risk youth. Finally, specific proposals are listed that are directed toward the President, the Congress, the Federal Government, state/local legislatures, business, and community organizations to determine a national agenda for influencing issues affecting high-risk youth. Identifiers—*Idaho

This study examined issues related to the access of women and minorities to administrative positions in Idaho public schools. officers of Idaho school in trano public schools, officers of trano school districts; 102 women and minority school district administrators; and a sample of 22 school board district administrators, and a sample of 22 school board presidents. Factors contributing to the low number of women/minority administrators in Idaho manufactified including the Wold beautories. number of women/minority administrators in tuano were identified, including the "old boy network," family responsibilities, lack of mentors or role mod-els, late entry into the career track, and difficulty in gaining credibility. Certain organizations were idengaming credibility. Certain organizations were identified by all three groups of respondents as having credibility to impact change and provide leadership: the Idaho Association of School Administrators; and Northwest Women in Educational Administration. Responses of superintendents/personnel officers and approximate and respirate indicated that few the cers and board presidents indicated that few had developed plans to increase the access of women and minorities to administration. Yet a substantial and minorities to administration. Fet a substantial number of women and minority administrators indi-cated that progress had been made through the ef-fects of equal opportunity policies and other legislation. Eleven recommendations are made to the Board of the Idaho School Administrators' Assistance Center. Appendices include copies of survey instruments and individual responses. Includes 35 references. This report evaluates two arguments for the use of computers as an important tool in learning: (1) there is a need to develop the kinds of skills and knowledge that will allow youth to find good jobs in a changing, information-based national and international setting; and (2) computers are capable of im-proving the overall level of student achievement. Chapter 1 compares claims about computer educa-tion to actual outcomes, and examines the distribution of computers among nations, as well as the cost effectiveness of computers. Real-world applications of computers are reviewed in chapter 2 along with the issues surrounding computer use in education. Experts on computer education also provide insights on the use of computers in many countries of the world. Chapter 3 focuses on the effect of computer education on employment and skills, while chapter 4 assesses the effects of computers on learning and reviews the literature that measures the im-pacts on learning of different applications of computers in schools. Finally, the cost effectiveness of computer education is analyzed both in different configurations and when compared with alternative technologies. Initial conclusions based on the as-sessments made in this book include that: (1) there seasments made in this book include that: (1) there is little evidence that computers used for general education help individuals get better jobs; (2) there is little evidence that computers in schools help nations become more competitive; and (3) computers are more cost-effective than some technologies, and less so than others. An extensive bibliography is provided. (DB)

teractive Video, Junior High School Students, *Museums, Parents, *Videodisks Identifiers-Interactive Video Science Consortium

This paper describes the role of formative evalua-tion in the development of a museum videodisk project entitled "Earth Over Time," which was sponsored by 15 museums of the Interactive Video Science Consortium. Targeted for 10- to 12-year-old children who have come to the museum with their parents, this earth science videodisk covers plate tectonics, volcanoes, earthquakes, sea floor exploration, and shoreline erosion. A description of the exhibit design problems is followed by discussions of the phases of production-high level design, detailed design, production, and implementation and the escorted trial technique used for evaluation during the design phases. An example of the evalua-tion procedure is provided, noting the particular emphasis on four criteria: appeal, comprehensibility, accessibility, and responsiveness. Finally, the implementation formative evaluation process inj, accessionly, and responsiveness. Finally, the implementation formative evaluation process—which utilized videotapes of users, touchscreen records from the computer, and interviews with a sample of users—is described. This report summarizes the discussions at a seminar which provided the opportunity for 15 researchers and developers from the United Kingdom and other European countries to consider a number of short, medium, and long-term issues and assist in setting an agenda for future phases of research. The specific goals were: (1) to identify the tools necessary for the effective support of existing authors or development teams of computer-supported learning or training materials (short term goal); (2) to indicate where advanced developments in this and re-lated fields might lead to better computer-based training development tools (medium term goal); and (3) to suggest areas of fundamental research which are needed to underpin more effective courseware development tools for the future (long term goal). General issues covered included computer-based training and users of authoring tools. Several topics related to what tools are needed to improve current practice are then considered, i.e., the limitations of current authoring systems; problems to be solved with better tools; assessment of organizational needs; analysis of training needs; design; prototyping tools; and user modelling. Software engineering techniques are described, including simulation and modelling, Smalltalk and direct-manipulation interfaces, HyperCard, integration, and expert systems. Several issues of instructional and learning strategies are summarized. The report concludes with outlines of tools and techniques that need to be developed and issues for the research on which such development depends. A list of seminar participants is appended. (MES)

Identifiers—Map Reading
This study of the role which learner control plays

in the success of interactive courseware (ICW) was designed to determine whether providing students with an option to review content in ICW-when atwith an option to review content in IC w-men at-tempting to answer embedded questions-improves their achievement on a posttest without adversely affecting the amount of time it takes to complete the instruction. The subjects were 58 Army ROTC ca-dets and 12 students from the undergraduate teacher program at the University of Kansas, who were randomly assigned to groups. The groups were then randomly assigned to treatments. The independent variable was analyzed for effect in relation to five dependent variables: (1) achievement in relation to fact questions, procedure questions, problem solving questions, and total score; (2) instructional solving questions, and total score; (2) instactional time; (3) attention time; (4) review time; and (5) acquisition rate. The independent variable was learner control of a Content Review Option (CRO). An eight-lesson course on military map reading was converted into two versions of computer assisted instruction (CAI). In version 1, subjects had access to a summarized review of a lesson's content after the lesson had been completed but before encoun-tering the embedded questions. In version 2, subhad access to the review at the end of a lesson, when a question was presented, and after receiving feedback to a question response. The recall posttest was a 21-item multiple choice test. Subjects were also asked to respond to seven questions after taking the posttest. Analyses of the data indicated that providing a content review option did not produce a significant difference between the groups on any of the variables. A discussion of the results and seven recommendations conclude this paper. (48 references) (BBM)

Identifiers—Conceptual Analysis
The goals of this study were to identify the constructs of visual literacy, to determine the amount of structs of visual interacy, to electrimic the amount of agreement or disagreement which exists concerning the identified constructs, and to provide a measure of relative importance among the identified constructs. The Delphi technique was employed to elicit information and opinions from a panel of visual literacy experts. A set of statements based upon the initial input of that group was further refined by the group through successive Delphi iterations. While the Delphi process was central to this research, basic Delphi techniques were expanded to include an extensive instrumentation phase and a validation of the results of the Delphi study through validation of the results of the Delphi study through a readministration of the instrument with a different group of subjects. Among the conclusions are that: (1) the Delphi technique proved to be an appropriate ate methodology for identifying visual literacy con-structs; (2) the Delphi technique was appropriate for bringing visual literacy experts to consensus regarding the elements, concepts, and constructs of visual literacy; (3) the very strong correlation between the level of agreement and the level of consensus indi-cates that there is the most agreement on those con-structs which are the most highly accepted; (4) the set of agreed-upon statements emanating from this study can be the basis for restructuring a coherent theoretical base for visual literacy; and (5) notwithstanding statements to the contrary in the literature, there is a high level of agreement on most factors associated with visual literacy. els, *Problem Solving
Identifiers—*Clinical Reasoning
This paper discusses two methods used in training allied health students to clarify patients' problems and develop treatment plans to resolve them. The traditional problem solving approach is presented as a means to introduce students to patient evaluation and treatment planning, while clinical reasoning is seen as a more expert way to approach this process. The incorporation of problem solving early in allied health curricula, followed by instruction and pracitee in clinical reasoning, is recommended. An in-structional model for facilitating students' acquisition of clinical reasoning skill is presented. Flowcharts of the problem solving and clinical rea-soning processes and a model for instruction in clinreasoning are included. (9 references) (Author/GL)

This study investigated the interaction between hemispheric specialization and pictorial recognition memory for pictures presented in three different color modes: realistic color, non-realistic color, and monochrome (back and white). The study was also designed to confirm the efficacy of applying signal detection analysis to color recognition memory data to obtain a more accurate assessment of the role of color in visual information processing. The stimuli consisted of 120 stimulus slides and 60 distractor slides, all photographs of North American and Canadian geography scenery. Twenty-six graduate stu-dents were first shown the set of 120 stimulus slides. They were then instructed to perform a complex verbal masking task designed to localize processing to the right hemisphere while viewing either the first or second 60 slides; the alternate slides were viewed or second ob sides; the alternate sides were viewed without the masking task. The subjects were then presented with a random distribution of the stimulus and distractor slides for five seconds each, and asked to indicate whether the slide was one they had seen before or a "new" one. It was found that under the right localized treatment, both the realistic color and black and white treatments scored significantly lower than the non-realistic color treatment, although the non-realistic group did not differ significantly from any of the treatment groups under the integrated treatment. It is concluded that color prointegrated treatment. It is concluded that color pro-cessing is bi-locational, with realistic /verbal image processing being done in the left hemisphere and pure color processing in the right hemisphere. It is further concluded that visual realism probably con-stitutes a combination of imaginal and verbal infor-mation. Three figures are appended. (49 references) (RBA)

A study was conducted to determine the effectiveness of "Discretion vs. Valor." a simulation

tiveness of "Discretion vs. Valor," a simulation game designed to give North American players a chance to: (1) identify with "believers" (Christians) in the Soviet Union in order to form new images of in the Soviet Union in order to form new images of these persons; (2) gain empathy for Christians by understanding the dilemmas they face as they exercise their faith; and (3) become active participants in decision-making in a family group context. The game prototype was tested, evaluated, and revised during 10 field tests in 1987. During 1988 celebrations of the millennial year of Russian Orthodoxy, 72 North American Christians played the revised game in 15 "family" groups, returning self-report evaluations which included 78 claims of "identification" with at least one of the game's characters. tion" with at least one of the game's characters. Reports of the game's greater than average influneports of the game's greater than average influence upon their cognitive learning came from 76% of the players, while 60% of all players reported that the game experience produced changes in their attitudes. Comparison of pre- and post-game measures of behavioral intention for six common religious of behavioral intention for six common religious practices showed 95% of players with altered "commitment levels" after play. Future tests of identification theory and role empathy are suggested by this study. Data are presented in three tables, and instruments for pre-game and post-game measurement of attitude change and for participant evaluation of the simulation are included. (3 references) (Author/

Identifiers—"ARCS Model, Course Effort Survey, Course Interest Survey, Keller (John) This study surveyed adults in a wide variety of settings to determine their perceptions of their moti-vational needs. Subjects were 307 adult participants, mostly K-12 teachers and administrators, who were enrolled in a variety of credit and noncredit continuing education classes and workshops at a major midwestern university. A needs assessment survey instrument, developed through revisions of the Course Interest Survey and the Course Effort Survey to reflect the integration of adult learning and general motivational factors relevant to adult learn-ers, was administered over a 4-month period. Results suggest that: (1) instructional strategies can have a positive effect on the interest and effort of adult learners; (2) instructional motivation has com ponents of instructional appeal and learner effort; and (3) many instructors' motivational methods are and (3) many instructors' motivational methods are perceived to have a stronger positive effect on adult learners' interest than on their effort in learning. Confidence building strategies were found to be much more strongly linked to perceived effort of learners than to instructional appeal. Based upon instructional motivation theory, adult learning theory, and these results, an adult learner/instruction interaction motivation model has been developed to show the interaction of methods, conditions, and outcomes for the motivational instruction of adults. Methods are organized as to the suggested effects Methods are organized as to the suggested effects on appeal, effort, and satisfaction. (15 references) (GL)

ogy Transfer, Two Year Colleges A study of administrators, teachers, and students A study of administrators, teachers, and students at 19 community colleges was conducted in order to better understand the individual groups served by satellite technology in distance education programs. Along with demographic information, the following issues were investigated: (1) learning styles most commonly used at each institution; (2) levels of knowledge about alternative delivery systems; (3) attitudes toward educational technology; (4) attitudes toward the use of communications satelliances. tudes toward the use of communications satellites;
(5) the level of administrative support to be expected; (6) faculty attitudes toward educational technology in relation to their teaching styles and in relation to their curricula; (7) student attitudes toward educational technology in relation to their major curricula; (8) faculty attitudes toward com-munications satellites in relation to their disciplines; and (9) student attitudes toward communications satellites in relation to their major curricula. Recommendations include purchasing a satellite dish to demonstrate the benefits of satellite use to downlink sites, launching public relations campaigns to in-form potential users about the technology, communorm potential users about the technology, communicating with schools currently using satellite systems in order to gather accurate cost data, determining which curricula are best suited to the introduction of satellite technology, conducting stiff development programs to support technology integration, and informing faculty of educational technology facilities and services available at their schools. Identifiers-*Mental Effort, *Practice Questions

Identifiers—"Mental Effort, "Fractice Questions This study investigated learners' preconceptions of interactive video (IV), instructional television (ITV), and television (ITV), and compared three treatment groups on learners' perceptions of invested mental effort and achievement on a test of recall and inference. The three treatments consisted of an IV lesson that included practice questions requiring an earlier response an ITV lesson that inquiring an active response, an ITV lesson that in-cluded practice questions requiring a covert response, and a TV lesson that did not include practice questions. The relationship between learners' preconceptions and perceived mental effort was also investigated. The subjects were 78 undergraduate students who were randomly selected and assigned students who were randomly selected and assigned to the three treatments, and a posttest only control group design was used. The independent variable consisted of the video-based instructional materials, and the dependent variables were student ratings of perceived mental effort, recall scores, and inference scores. Information on student preconceptions of the difficulty of learning from IV, ITV, and TV was also collected for descriptive and correlational pur-poses. Several statistical tests of significance were poses. Several statistical tests of significance were used to analyze the data, including analysis of variance (ANOVA), Tukey's Honestly Significant Difference (HSD) test, and Pearson's test of correlation. The results of the study indicate that learners who are required to actively respond to practice questions that are embedded in a video-based lesson recall significantly more information from the lesson than learners who are not provided with practice questions. It is suggested provided with practice questions. It is suggested that, although the inclusion of such questions does increase the amount of factual information recalled, higher level practice questions may be needed to increase the number of inferences generated in response to a video-based lesson. search Methodology, *Research Needs Identifiers—*Clark (Richard E) A response to Richard E. Clark's conclusion that media research needs to stop emphasizing descriptive research necess to stope emphasizing descrip-tive research and focus on prescriptive research de-signs and questions, this paper reiterates the distinctions between disciplines and applied fields of study, and suggests that these distinctions should be evident in the descriptive/prescriptive research be evident in the descriptive prescriptive research reports generated for each; imparts the author's be-lief that replicating the theoretical and inquiry strat-egies of descriptive research may be debilitating to applied research; and discusses instruction in reality and the implications of a holistic research paradigm to study learning from instruction. The paper argues to study learning from instruction. The page is again that commitment in the past to the constructs im-posed by a particular discipline has failed to produce the consistency, generality, and commonality needed for the development of a comprehensive paradigm for applied research on learning from in-struction. It also warns that research without a theoretical domain may provide new directions that are no more beneficial as a guide than the paths of the no more beneficial as a guide than the pains of the past, and that, although applied research in this area should be based upon the constructs of learn-ing/cognitive theory, instructional theory should not be confused with learning/cognitive theory. A research paradigm is presented which is based on the presumption that there is both theoretical and intuitive commonality among the researchers and practitioners interested in learning from research. It is noted that such a paradigm needs to be broad enough to include psychological, sociological, and physiological experimental and naturalistic research and dynamic enough to allow for the inclusion of various theories pertaining to how, when, where, and why learners become competent. During the past century, most research addressing the legibility of text in routh has used adult subject to the service of the service of

the legibility of text in print has used adult subjects. The study reported in this paper investigated differences in reading rate and comprehension scores of eighth grade students reading from paper copy or computer screen. Three hundred eighth grade stucomputer screen. Inter hundred eignin grade stu-dents in computer literacy classes were randomly assigned to 10 treatment groups. Subjects were timed as they completed a cloze reading passage, decided which words were missing, and wrote those words on an answer sheet. This time was used as the reading rate. Passages were subsequently socrete. and the scores were used as the comprehension rate. Subjects all read the same passage, but the passage was presented in one of 10 different text presentation modes involving variation in line length, back-ground and foreground color, and contrast ratio in order to facilitate comparisons among the treatment groups. Two one-way ANCOVAs were used to ana-lyze the data; one ANCOVA analyzed reading rate while the other analyzed the comprehension scores. The finding of no statistically significant differences in reading rate for any of the 10 groups conflicts with most of the findings from adult reading rate research, suggesting that reading level might be a factor affecting reading rate from electronic screens or paper. The finding of no difference in comprehension was consistent with previous studies. Thus, the ability of adults or eighth grade students to comprehend level does not among to be impaired by the while the other analyzed the comprehension scores. prehend text does not appear to be impaired by the

decreased legibility of computer screens. (27 references) (Author/GL)

Designed to begin a feminist "unthinking" and rethinking of educational technology, this paper be-gins by examining some definitions of what that technology essentially is. Three characteristics of a technology essentially is. Three characteristics of a feminist approach to science that can inform a re-thinking of educational technology are then identi-fied: (1) the theorizing of gender as a variable of consequence; (2) the valuing of women's experience as a scientific resource; and (3) the positioning of the researcher in the same critical plane as the re-researcher. The discussions is seen that the contraction of the second searched. The discussion emphasizes issues that arise from an examination of educational technolarise from an examination of educational technology of the context of three categories of technology users in schools: administrators, who impose educational technology on students; and students. It is argued that, since educational technology has is argued that, since educational technology has been developed largely outside the domain of the teacher and without the benefit of her wisdom, the structures, standards, and schedule of the teacher's school day become out of her control, and research on the effectiveness of educational technology denies the importance of her work. It is also argued that educational technology as used by students is thoroughly saturated with the sex biases of its root disciplines and curricular contexts. It is concluded disciplines and curricular contexts. It is concluded that the contributions of the teacher user and the female student user to the teaching-learning process are denied by the increasing use of educational technology, and a number of questions that might guide feminist rethinking of educational technology are suggested. This study investigated student preferences for either teacher-written or computer-generated marking of written compositions. Ninety-seven high school students typed assigned compositions on a word processor. Three skills pre-selected by the teacher were checked on each composition. Stuteacher were checked on each composition. Students were randomly assigned to treatments so that, on the first composition, half were marked by the teacher and the other half by a computer proofing program. On the second assignment, the teacher/computer groups were switched to the opposite type of marking. On a third assignment, students chose either teacher or computer marking. Results of a questionnaire showed that after experiencing both types of marking, 87% of the students selected teacher marking over computer marking. The most teacher marking over computer marking. The most common reasons for selecting the teacher were the more personalized marking, ease of understanding, the marking of additional areas, and the fact that the teacher is the ultimate grader. Eighty-six percent of the students reported that they liked using word processors, and 93% reported that word processors made writing easier. (32 references) (Author/GL)

tion, "Professional Recognition, Telecommunica-tions, Trend Analysis

A content analysis was performed to determine the trends and issues in educational technology for the period from October 1, 1987 through September 30, 1988. Sources for the analysis included five lead-ing professional journals in educational technology, papers given at annual conventions of three profes-sional associations, dissertations from five universi-ties that have a high level of doctoral productivity. sional associations, dissertations from five universities that have a high level of doctoral productivity, and the educational technology documents entered into the ERIC database. The analysis was complemented by the examination of supplementary documents to determine the political, social, and economic reasons for the findings. The top trends identified in the study are: (1) design, development, and evaluation of instructional greenings are considered. and evaluation of instructional products and procedures is a primary concern; (2) professional educa-tion for teachers in the use of educational technology is seen as a basic need for present and future professional service; (3) distance education is becoming a significant instructional delivery system that uses technological means to reach its goals; (4) the computer is the dominant medium in the field, and after computers, telecommunications and video are emerging as major delivery systems; (5) the role of the educational technologist is unclear and varies from location to location; (6) case studies serve as models to follow in the implementation of educational technology applications; (7) the field of educational technology is concerned about its status as a profession; and (8) educational technology principles, products, and practices are just beginning to be and after computers, telecommunications and video

integrated into courses and curricula. (24 refer-

puter Anxiety Index, Learning Style Profile (NASSP)

The purpose of this study was to obtain students' cognitive style profiles and obtain a record of their cognitive style profiles and obtain a record of their use of three information modes during the hypermedia lesson, "A Look Backward: An Encounter with Late Victorian Fashion." The study examined relationships among: (1) nine dimensions of cognitive style, as measured by the National Association of Secondary School Principals (NASSP) Learning Style Profile (LSP); (2) students' use of three information modes-visual images, written text, and audible descriptions; (3) computer attitude as measured by the Beliefs About Computers Scale (BACS); (4) by the Beliefs About Computers Scale (BACS); (4) computer anxiety as measured by the Computer Anxiety Index (CAIN); and (5) achievement. A descriptive and correlational design was used. Subjects were 79 undergraduate students enrolled in junior year classes in textiles and clothing and teacher education. Students completed the CAIN, BACS, and achievement tests before and after using the hypermedia program. The data demonstrate that students had individual cognitive styles and preferences for progressing through a lesson. The lack of more significant relationships between variables signifies that there is much variability in the way students learn. Textiles and clothing students way students learn. Textiles and clothing students had fewer significant correlations than did teacher education students, suggesting that their pattern of learning is harder to detect. The findings support an approach to instructional design that allows students to choose from many types of information modes. (27 references) (GL)

Descriptors—"Computer Assisted Instruction,
"Difficulty Level, "Learner Controlled Instruc-

tion, *Pacing, *Sequential Learning Identifiers—*Text Design

This review of the literature on five learner control variables in computer-based instruction con-cludes that: (1) pacing left to learner control has been found ineffective because learners tend to procrastinate or to exit lessons prematurely; (2) sequence, or content flow, has been an ineffective variable left under learner control since appropriate variable left under learner control since appropriate sequencing of the lesson requires prior knowledge of content; (3) number of examples and level of difficulty are also inappropriate decisions for the learner to make because students frequently lack metacognitive skills to make such strategic decisions; and (4) advisement strategies have attempted successfully a diagnostic/prescriptive approach to control of content variables. Noting that current research has focused on contextual variables under control of the learner, and that variables such as text density level learner, and that variables such as text density level and background theme have allowed for learner control of stylistic qualities without sacrificing instructional support, it is concluded that future research should focus on the continuum of contextual variables with their accompanying affective benefits rather than on content variables with their inherent disadvantages and implicit "all or none" philosophy. This study examined two research questions: (1) Is there any significant relationship between general departmental support and adoption of instructional innovations by faculty innovators at a large university? and (2) Is there any significant relationship between specific departmental support and adop-tion of instructional innovations by faculty innovators? The study employed a cross-sectional survey method. Subjects were all faculty members at Michigan State University who voluntarily developed and used instructional innovations in their departments. A 30-item structured questionnaire was used to gather data from 55 subjects. Pearson correlation to gather data from 53 subjects. Pearson correlation was used to determine the relationship between general departmental support and adoption, while partial correlation was used to determine the relationship between departmental support and adoption. Findings indicate a significant relationship between general departmental support and adoption of innovations by faculty innovators. With regard to the second question, findings revealed sig-nificant relationships between office support and adoption, colleagues' support and adoption, and chairman's support and adoption. No significant relationships were found between financial support and adoption, policy support and adoption, and technical support and adoption. (GL)

ence, Text Design

This study investigated the position of illustra-tions and how they affect the sequential organization of text. The primary purpose was to describe learners' reading sequence and preference for page designs with variations of illustration placement. The 70 subjects were undergraduate and graduate students enrolled in education courses at Memphis students enrolled in education courses at Memphis State University. Each subject was given a set of stapled pages containing eight randomly-sequenced page designs, each separated by a response sheet. For the "preferred" or natural reading sequence of the subjects to be determined, meaningless text which had the same structure and appearance as realistic text was used. The desktop publishing gen-erated text was printed in a two-column format for two of the designs and in a three-column format for the other six. In each design, the illustration cut across at least two columns. In addition, a two-point horizontal bar was inserted above the illustration in four of the designs. For each design subjects were asked to trace, with a pencil, the sequence with which they would naturally read the text and to indicate their reactions to the design on a five-point scale. A two-column format combined with illustrations dividing the columns was preferred over a three-column format incorporating an illustration dividing all columns. Results imply that illustration placement is a critical attribute in the design of instructional text. (5 references) (GL)

Motivation Scale

This study determined the effects of using an instructional game and supplemental readings on stu-dent motivation as defined using the ARCS model of motivation and performance. Subjects were 75 undergraduate education majors enrolled in a reundergraduate education majors enrolled in a required educational psychology course at a large southwestern university. All students attended a lecture on the information processing model of learning and were told to read a chapter in the textbook, "Essentials of Learning for Instruction," by Gagne and Driscoll. Two days later, subjects were randomly assigned to either a treatment group or a control group. Both groups were given 30 minutes to practice the information presented in the lecture and assigned reading. Treatment group, subjects to practice the information presented in the lecture and assigned reading. Treatment group subjects used an instructional game developed by the re-searchers, and subjects in the control group used a worksheet containing the same review questions as the game. Upon completion of the practice activity, all subjects completed the Instructional Materials Motivation Scale (IMMS) and then took a 15-item Motivation Scale (IMMS) and then took a 15-item constructed response posttest to measure their performance. Multivariate analysis was used to test for an overall difference between groups on the motivation scales. This was followed by univariate analysis on each of the four IMMS subscales. Results indicate that using the instructional game and completing the reading assignment both had a significant effect on motivation, and that completion of the reading assignment is significantly contributed to reading assignment significantly contributed to posttest performance. While results suggest that subjects in the treatment condition outperformed control group subjects on the posttest, this differ-ence was not statistically significant. These results suggest that instructional designers can provide students with a motivating practice alternative that is as effective as more traditional methods of practice. (39 references) (GL)

The purpose of this study was to determine the effects of three electronic text variables (runaround wrangener).

around, wrap-around, and transparent text) on read-ing speed and comprehension. One hundred thirty-two undergraduate students in an introducintry-two undergraduate students in an introduc-tory computer literacy course at a major university were asked to read one of three randomly-distrib-uted passages consisting of approximately six pages of informative text about hypercard and desktop publishing. All reading materials included the same text and graphics but each set utilized a different text wrap. Pre- and posttests were used to measure students' comprehension of the reading material. The posttest contained an additional six-question attitude section including questions regarding the students' judgment of the difficulty of the content, students judgment of the directly of the content, the degree to which the graphics interfered with their comprehension and reading speed, their degree of interest in the subject, and their overall understanding of the material after reading it. Although analysis of variance indicated no significant differences for either reading comprehension cant difference for either reasing comprehensions or speed among the three groups, it appears that the wrap-around group had a higher mean gain than the transparent group, which in turn had a higher mean gain than the run-around group. Second, it appears gain than the run-around group. Second, it appears that the wrap-around group also had the fastest reading speed, followed by the run-around group and then the transparent group. Because a signifi-cant difference in both reading speed and comprehension was found between the run-around and wrap-around treatment groups in a prior study, a replication of this study is recommended. The primary purpose of this study was to investigated. The primary purpose of this study was to investi-gate the effects of three levels of personaliza-tion-individual, group, and non-personalized-on the achievement of seventh grade Hispanic boys and girls on mathematics word problems. Subjects were 123 seventh grade Hispanic students from a rural junior high school near Phoenix, Arizona. A rural junior nigh school near Phoenix, Arizona. A pretest was employed to control for potential initial achievement differences by treatment or sex. Sub-jects were blocked by sex on the basis of their pre-test scores, then randomly assigned within each block to the three treatments. A biographical inventory was administered three weeks prior to the adistration of treatments to collect, in addition to biographical data, information regarding favorite objects, places, persons, and events for use in per-sonalizing the word problems. The three treatments were administered during regularly scheduled math classes. Achievement was measured the following day using a 16-item constructed response posttest ediately after completion of the review material. An attitude scale was administered to measure the student's level of interest in the lesson and perceived level of difficulty, perception of the impor-tance of the lesson, the level of importance attached to seeing one's name in print, preference for personalized or non-personalized problems, and preference for word or number problems. Analyses of the indicate that personalization had a significant effect on student achievement on two-step prob-lems, and that there was no significant difference in the overall performance of males and females. Atti-tude data generally favored individualized personalization over the references) (GL) the other two treatments. (29

An extensive evaluation was conducted of a train-ing program on industrial safety that was designed to change employee attitudes and behaviors in relation to energy control and power lockout (ECPL), i.e., closing down an assembly line while completing diagnostic or repair tasks. The research question was aimed at determining the effects of entry perceptions of organizational climate factors on training outcomes. Materials for the professionally designed and developed program consisted of eight modules, a videotape, an instructor's manual, a participant's workbook, and a portable pocket manual. Participants, consisting of both hourly personnel and salaried and supervisory personnel, completed a questionnaire prior to and within 30-90 days after the training. The training outcomes used were gain the training. The training outcomes used were gain scores calculated from pre- and posttest measures of knowledge of ECPL procedures, attitudes toward safety on the job, on-the-job application of general safety precautions, and on-the-job applications of specific behaviors related to ECPL procedures. Organizational climate factors were measured by employee perceptions of 20 different climate elements. The results support only one of four hypotheses; i.e., organizational climate variables influence specific

on-the-job behavior directly related to the training content. It is concluded that designers of industrial content. It is consider that designers of industrial training programs need to consider all of the factors that affect the learning process—with emphasis on the principles of adult learning—as well as the sys-tematic procedures of designing programs, materi-als, and media. This study examined the effects of animated presentations on intentional and incidental learning and the degree to which computer practice activities contained intrinsically motivating characteristics as measured by continuing motivation. A total of 70 fourth graders participated in an introductory lesson on Newton's laws of motion. Two levels of visual presentation (static graphic and animated graphic) were crossed with two levels of practice order (queswere crossed with two leves of practice order (ques-tions/simulation and simulation/questions). Within-subject factors consisted of learning intent (intentional or incidental), visual testing format (all verbal or verbal and visual), and test interval (imme diate or delayed). Results showed that animated graphics successfully promoted incidental learning. In addition, students overwhelmingly chose to return to the structured simulation practice when placed in a free-choice situation. (33 references)

Identifiers—*Adjunct Questions

The effects of overt, covert, and summary practice conditions on four levels of learning were examined. One hundred twenty-two middle class sixth-grade students were randomly assigned to practice co tion. Passages about energy sources were read by the students and oral reviews were directed according to treatment. The summary group was given a review of relevant content, while covert and overt groups responded to adjunct questions. A 32-item selected response test contained 16 items from the practice booklet and 16 new items not practiced by any treatment. Data were examined on four depen-dent measures: repeated fact, new fact, repeated in-ference, new inference. The results show that oral summaries of relevant information can be as effec-tive as inserted questions on immediate and delayed test performance. This study suggests that practi condition and question type may differentially af-fect learning and retention. (31 references) (Author)

Identifiers—*Context Adaptation, Examples, *Instructional Support
Designed to develop a more practical model for

adapting context to learner interests, this study used acapting context to learner interests, this study used computer-based instruction to make alternative contexts for statistics problems—sports, business, education, or no-context-available for selection by individual learners. The subjects were 227 undergraduate students enrolled in required education courses at Memphis State University. The context adaptation strategy was evaluated as it was used both independently of and in combination with learner control (LC) of the practice examples. The research design involved the manipulation of standard (prescribed) contexts versus LC-context in combination with standard instructional support versus LC-instructional support. The study also investigated the nature of LC decisions in relation to the types of instructional options made available and learner characteristics. Instruments used in the study were the Nelson-Denney Reading Test, a unit pretest, a unit posttest, and a task attitude survey. Analyses of the data revealed little difference be-tween the treatments in achievement; students who received minimum support found the lesson faster moving than those who received maximum support: 92% of the subjects had positive attitudes toward the desirability of selecting problem themes; and learners with higher prior achievement and reading ability tended to complete the task faster, score higher on the posttest, and view the task more favorably. It was concluded that, although the achievement results failed to support the hypothesized benefits for learning, a practical model for incorporating contextual adaptation in CBI had been developed and demonstrated. The purpose of this study was to determine an optimal schedule for the frequency and spacing of drill and practice in the learning of verbal information. Subjects for the first phase were 62 fourth, fifth, and sixth graders in a public elementary school. Using a computer-based drill involving the naming of the capitals of the 50 states of the United States. the students each determined their own naming of the capitas of the 90 states of the United States, the students each determined their own practice schedules over a period of two weeks. A pretest and posttest were used to measure the level of success of each student in learning the assigned items. Results suggest that two times through the restinities deal the state of the state optimized drill, one near the time of original learning and the other near the retention measure, are sufficient for maximal learning of the drill material.

This conclusion will be tested in the second phase of the study. (27 references) (Author/GL)

Analysis, *Computer Assisted Instruction, *Courseware, *Individualized Instruction, *Instructional Effectiveness, Mathematics Instruction, Research Design

This paper reviews empirical studies of the effi-cacy of the use of computer assisted instruction (CAI) in various settings, with particular attention to the use of CAI to teach mathematics skills and concepts. Studies using students at various ages and various subjects are considered, as are applications in which CAI was used as the primary instructional vehicle as against studies in which CAI was used as a supplement to conventional instructional intera supplement to convenient institutional institution when the convenient in the conv at least as effective as conventional instructional methods, but superiority of CAI has been demonstrated in only a limited number of studies. Failure to find statistically or educationally significant re-sults favoring CAI may, in some cases, be an artifact of small sample size or other design flaws. CAI appears to be most useful when software includes diag-nostic branching that attempts to detect the conceptual difficulties that students experience when confronting certain problems, and then pres-ents instructional activities that focus on individual student needs. Descriptors—*Computer Software, Content Analysis, *Design Preferences, Grade 5, Hypothesis Testing, *Interaction, Intermediate Grades, Interviews, Microcomputers, Questionnaires, *Stu-

dent Motivation
This study tested the hypothesis that children
bring specifiable expectations to their use of interactive computer programs, and that these expecta-tions will determine, to a large extent, which features of a given program will be motivating to a child. It is also argued that the different genres of interactivity relied upon by software designers will elicit different expectations from a child. Subjects were 14 fifth-grade students. Three sets of data were collected by: (1) asking students to sort software titles into piles of "like" programs; (2) asking stu-dents to indicate on a scale of one to three how much they like to use each program; and (3) identifying the interactive elements of the favored soft-ware genre-adventures through group interviews. The groupings were recorded and children were asked to label each pile. The analysis yielded seven clusters of programs that could be differentiated ac-cording to the students' labels, and four ways of interacting in and with the world were identified. To investigate the relationship of motivation to interactive formats, the motivational strength of a program was measured by asking 22 subjects to complete a questionnaire by indicating how often they would choose to use each of the programs in their free time. Adventures and programs which generated printer output were significantly preferred to the other clusters but not to one another. It is suggested that what makes each program so successful is the fit between the reasons the child wants to use the program and the interactive environment it creates, and the similarity between the motivating goal structure for that type of activity in the real world and in the software program. School RI

The first phase of the process of developing a plan to promote increased use of educational technology by the instructors and students of the U.S. Navy's Surface Warfare Officers School (SWOS) in New-port, Rhode Island, began with a needs assessment which focused on the mission and organization of the school; the SWOS curriculum and the teaching the school; the SWOS curriculum and the teaching styles, competencies, and preferences of SWOS in-structors; and SWOS classrooms and laboratory fa-cilities. Recommendations for equipping SWOS classroom and production areas cover video display, front screen projection, audio reinforcement/sup-plemental, video recording, graphics support (local production), student support/study, and instructor support. The SWOS instructors found that the proposed design plan for classrooms was compatible with their needs, had appropriate centralized control of equipment, met expectations, and was at an appropriate level of sophistication. Reactions to the proposed media centers were slightly less positive. Six prototype systems were completed, i.e., equipment was installed in one of each of four categories of classrooms and the prototype satellite and central media centers. After using one or more of the prototypes, the reactions of the instructors were generally favorable. It was concluded that instructional design procedures that are normally limited to the develop-ment of instructional materials or sequences are just as appropriate for a hardware-based project as they are for software development. Four tables and 17 figures are appended. (BBM)

Scientifier advancements in cognitive science and

Scientific advancements in cognitive science and instructional technology extend the behaviorallyoriented learning paradigm of instructional design and management in three major areas: (1) analysis of information-to-be-learned; (2) means of evaluating learners; and (3) linkage of learning theory to instructional prescriptions. The two basic types of analysis of information-to-be-learned-content analysis and task analysis-both identify the external

structure of the information without regard for how it might be stored in human memory. Cognitive science suggests that a context analysis should also be conducted and the concepts and their organization for employment identified to provide a means for sequencing instruction so that it improves the use of knowledge in problem solving. While learner evaluation in the behavioral paradigm focuses on observable, student performance assumptions. able student performance, evaluation in the cognitive paradigm takes on diagnostic functions. The implications for instructional design lie in the cognitive paradigm concepts of diagnosis of learn-ing needs during instruction, and measures of achievement within the context of meaningful and complex situations. The instructional design model that is presented focuses on the planning of a learning environment which enables students not only to acquire knowledge, but also to improve their cogniacquire knowledge, but also to improve their cogni-tive abilities to employ and extend their knowledge. Computer programs that are domain specific and provide for self-directed learning seem to offer ex-cellent instructional strategies for meeting the goals of a curriculum that emphasizes higher-level think-ing strategies. System Design, Individualized Instruction, In-System Design, Individualized Instruction, Instructional Development, Instructional Effectiveness, *Job Training, Military Training, Postsecondary Education, *Skill Development, Technical Education, Transfer of Training Identifiers—*Embedded Training (ET), means the use of sophisticated simulators for training that are embedded within operational equipment, is an emerging education, is an emerging entire training that are embedded within operational equipment, is an emerging

phisticated simulators for training that are embed-ded within operational equipment, is an emerging trend in military education for pilots, weapon sys-tems personnel, etc. Training devices and ET are used to provide opportunities for both practicing job skills and original learning, and their effectiveness is measured by level of fidelity, cost, feedback, trans-fer of training to the operational equipment, and measured by level of indently, cost, tecdouck, trans-fer of training to the operational equipment, and increase in skill level. ET has several advantages over traditional approaches in that it provides: (1) the opportunity for immediate hands-on experience with the operational system; (2) self-paced practice in critical hard-to-master skills; and (3) realistic, the operational system of the properties of the control of th system-specific cues, responses, and information. It can also provide a mechanism for site-specific or operational-specific skill qualification testing. Based on computer technology, it is more appropriate to training tasks that require higher level cognitive skills, integrated performance of multiple skills, or team training. First used successfully in the 1950s in team training. This used successfully in the 1930s in the U.S. Air Force, ET is now specified as the preferred training alternative for the design and development of training subsystems for Army materiel systems. Generally, ET progresses through three major analysis stages-concept formulation, training requirements analysis, and training system/comporequirements analyss, and training system/component design. The use of the operational equipment to assist in the training of employees appears to be growing in both military and commercial applications. (A number of military projects utilizing ET are listed and five commercial applications are briefly described). (4 references) (BBM)

This review of the role of the metaphor in instruction begins with a brief description of historical

thinking on the subject. Modern views of the metaphor as a psychological mechanism rather than just a figure of speech are then presented, with emphasis on reasons why metaphors should be helpful in education. It is noted that the hypothesis that metaphor cauon. It is note that the nybonesis that metaphor allows a transfer of meaning from something well-known to something less well-known is supported by contemporary theorists, who further suggest that the transfer of structures from one domain to another may involve the creation of new cogni-tive structures. Brief discussions of the substitution theory view and the interaction view include the limited role ascribed to metaphor in education by both substitutionists and interactionists. The attitudes of scientists toward metaphor are then described, and it is noted that investigators during the 1960s began to recognize the apparent importance of non-literal imagery to the explanatory aspects of scientific theory. Psychological studies of metaphor comprehension in the context of child development and processing by mature subjects are reviewed, as well as research on the time needed to process metaphor under various conditions and the memorability of metaphorical language. Instructional uses of metaphor are also discussed in the context of the com-munication process. The paper concludes with a discussion of the possibility of theoretical integration of metaphors into instructional design theory, Reigeluth's elaboration theory, and Keller's motiva-tional theory. Descriptors—*Grammar, *Instructional Design, Instructional Systems, Research Methodology, Task Analysis

Identifiers—Analogy, *Linguistic Analysis
This paper is a short tutorial in formal grammar with speculative examples of how it could be used as a research tool for task analysis, the description of lesson structure, the modeling of interactive dia-logue, and perhaps the instructional design process. organe's notion of "events of instruction" is used in an example of the application of linguistic techniques to instructional system design, and it is suggested that use of analogy is one way to think about the problems involved, e.g., the events of instruction may be compared to parts of speech, and sentences are made up of parts just as lessons are. It is argued that sentences are infinite in variety but constrained structurally; some instructional designs may be thought of as well-formed strings while others may violate our intuitions of well-formedness; and a grammar of instructional design would assign descriptions to lesson materials. A brief explanation of the term "formal grammar" as used in linguistics is followed by descriptions of other grammars proposed by researchers, including a story grammar, a Gagne's notion of "events of instruction" is used in posed by researchers, including a story grammar, a cinema grammar, a computer-interface grammar, a lesson grammar, and a grammar of instructional design. A summary suggests that while the ideas presented in this paper are far from complete, formal grammar as an instructional design device will at least facilitate the identification of testable hypotheabout optimal sequences, and might also be modified to help designers generate lessons more modified to help designers generate lessons more fluently or to allow the computer generation of large numbers of different, acceptable lesson structures that can be fleshed out by subject experts. The various grammars described are presented in nine figures. (11 references) (BBM)

This study assessed the effects of varying degrees of elaboration in a prose format using computer-as-sisted instruction (CAI) with accompanying slides on posttest scores of college age learners. Four in-structional treatments were used: control, embedded questions (TR1), computer generated feedback (TR2), and computer generated feedback with a visual rehearsal strategy (TR3). The control group had no elaboration method; for the other three treatments, elaboration was added to the script in increasing degrees. The subjects were 148 undergraduate students enrolled at the Altoona Campus of Penn State University. Materials used included a revised version of an instructional unit on the human heart developed by Dwyer in 1972. The instructional treatments were presented via an in-teractive video slide system and all subject re-sponses during treatments were restricted to simple keyboard inputs. Each of the four instructional treatments contained the same instructional script, visuals, terminology labels, and arrows. The experivisuals, terminology labels, and arrows. The experimental design was a randomized posttest-only control group design although a 36-question pretest on physiology was used to label each treatment's subjects as high or low prior knowledge. It was concluded that subjects with high prior knowledge will consistently score better than subjects with low prior knowledge regardless of the kind or amount of elaboration, although both groups will benefit about the same from extra elaboration on tests of increasing cognitive difficulty. tors' perceptions of learning concepts, reviews the cognitive learning literature, and argues for an expanded view of conceptual knowledge and its role in education and training. The report begins with discussions of changing views of concept learning and declarative and procedural components of concepts. A survey of 56 students in 3 graduate education classes is then described in which subjects were asked to respond to a scenario in which they are imagined to be teaching a sampling of concrete and defined concepts (glasnost, snow leopard, and justice) to college sophomores with no prior knowledge of the topic. The question for the students then is: What performances would serve as indicators that their students had really learned the three concepts? The broad array of concept performances listed by the subjects-339 for the three concepts-are summarized in four categories: definitions and defining attributes; examples and nonexamples; elabo-ration; and use-and an expanded notion of concept ration; and use-and an expanded notion of concept learning is presented. Five concept teaching strategies that include the declarative and problem-solving aspects of concept learning as well as procedural classification skills are then discussed. The strategies are: (1) teaching with analogies; (2) encouragegies are: (1) teaching with analogies; (2) use and inference practice; (4) alternative strategies for classification performance; and (5) determining qualities of con-cepts to be learned. It is concluded that this way of looking at concepts takes into account the declaralooking at concepts takes into account the declara-tive and metacognitive components of concept learning and use, and it is recommended that the "intellectual skills" of concept classification be inte-grated with the "verbal information" that makes the concept meaningful, and with additional skills that encourage use and inference. *Knowledge Representation Models. Examples,

This paper presents two general approaches to the assessment of knowledge structures, the first of which entails the building of empirical evidence to support cognitive theory. This type of assessment is concerned with attempting to prove the existence of various knowledge structures; that is, evidence that leads to the construct validity of these metaphorical ideas. The second approach is dependent upon the first task and attempts to look at the actual content within the structure. That is, assuming that such constructs (structures) exist, then what methods can constructs (structures) exist, then what methods can be used to determine the specific relationships of ideas within a structure? Different types of knowledge representation are described, including propositions/semantic memory; productions; schemata/scripts, and images/episodic memory/spatial knowledge. Several methods for assessing structure are then presented for different several methods of the several method for different several methods. ent types of representations, and it is noted that some of these techniques are concerned with prov-ing the existence of the construct while others are used to assess the current content of the structure. A brief review of the issues involved in the assessment of knowledge structures concludes the paper. (23 references) (BBM)

A research project was conducted to develop a narrative description of the strengths and weaknarrative description of the strengths and weak-nesses of the distance education component of the Zimbabwean teacher education program. The Triad Perspective Model of Distance Education (TPMDE), which resulted from the study's emer-(IPMDE), which resulted from the study's emergent design, combines three theoretical perspectives on education: systems theory; curriculum development theory; and adoption and diffusion of innovations theory. Major program strengths, identified using the TPMDE as a framework, are: (1) the strength of the conviction among Zimbabwe's educational community that distance education is a worthwhile venture; (2) the persistence of those in-volved in the program; (3) Ministry of Education advocacy; (4) quality of personnel involved in the program; and (5) quality of students at the teachers' colleges. Major weaknesses were: (1) the lack of a Zimbabwean model for distance education; (2) ineffective communication; (3) lack of accountability; (4) insufficient quantities of trained personnel; and (5) lack of instructor-student feedback procedures. Recommendations based on the comprehensive description of the program's distance education com-ponent included establishing a Distance Education Commission, providing for program evaluation on a regular basis, encouraging a more active role for the University of Zimbabwe, and establishing a distance education department at each teachers college in the country. Transfer of Training
Identifiers—*Aerial Combat Simulators

This report consists of several papers written, but not published, during the course of the WARNET study of requirements for a network of relatively low-cost, interconnected combat simulators for use in training pilots for combat readiness. It is projected that such a network would allow a number of aircraft to fight each other in simulated but realistic battles and incorporate many combat factors critical to the survival of the pilots. It would also allow aircraft to interact with ground vehicles and sur-face-to-air missiles. It is argued that this training would enable pilots to transfer skills from training to actual combat environments without the high risk of failure due to lack of experience. This conceptual research effort used information obtained from fighter pilots and computer and training experts to examine a range of questions and options that might examine a range or questions and options that might be considered with a network of tactical aircraft combat simulators. Although the main emphasis of the research was on training, some consideration was given to the use of such a network in aircraft development and in pilot selection. While such a network of aircraft simulators remains to be built, the results of this study suggest that such a network should be given serious consideration. (DB)

The Magazine and Journal Instructional Kit, Part 1 (MAJAK/1) is a HyperCard introduction to: (1) periodical indexes; (2) procedures for using the University of Maryland, College Park (UMCP), Serials List to locate specific articles; and (3) the arrange-ment of periodicals in the seven libraries of the UMCP Libraries System. Designed, developed, formatively evaluated, and revised according to an instructional systems design model, the program provides basic, individualized instruction for students to master prior to more advanced classroom instruction in strategies and methods of library research. The need for the program, specification its target audience, and overall content of instruc-tion were established by the 1988 UMCP Library Education Committee. Instructional materials and activities were developed by a design team com-posed of a content specialist, an instructional designer, and a computer programmer. Evaluation activities and materials were administered to 28 UMCP upperclassmen in two junior composition classes. Analyses of pre- and posttest data suggested that students profited from use of the program. Analysis of observational data indicated that stu-dents had virtually no difficulty with content, en-countered some problems with navigation, and found the package useful and attractive. Students' suggestions for improvement provided a rationale incorporating a navigational tutorial and other minor revisions into the package to make it even more valuable. Copies of the pre- and posttests and the observation protocol are among the 15 exhibits attached to the report. (11 references) (Author/DB)

Both interview and direct observation data were collected via on-site visits with the training directors at 22 U.S. training centers which had been identified as the best training facilities in order to examine why the instructional methods, techniques, and media changes in use had been tried and adopted, and to identify the trends these methods represent. The organizations studied included computer manufac-

turers, universities, military contractors, military academies, an airline, and a simulator developer. It was found that most of the organizations perform a needs assessment analysis to aid in choosing in-structional methods and media, and that there is a trend toward individualized instruction and real environment simulations. While the organizations were researching computer-assisted instruction, interactive video, instructional television, and distance learning as alternatives to current training programs, only instructional television was in wides spread use. Many successful programs were under the direct supervision of a high level administrator and funded at the corporate or division level; more innovation and creative activity seemed to occur if this was the case. Almost all class instruction was evaluated in some manner; however, materials and overall program evaluation was not consistently performed. Specialized according to instructional objectives, clients, and security, physical facilities included multimedia classrooms, most of which included equipment to project overhead transparen-cies and display videotapes and/or live television presentations. Identifiers-*NovaNET

The NovaNET computer system is a mainframe system with a large network of users sharing the same computer. This manual is intended to teach instructors how to use the NovaNET system to deliver instruction to their students. The manual is

divided into four main sections, each of which teaches a group of skills needed by NovaNET in-structors. The first section teaches instructors how to sign on to the system, how to get help and infor-mation about the system, and how to use the network's advanced communications features. The second section describes the C-router package, which is a general purpose tool for managing in-struction on the NovaNET system, and teaches first-time users how to set up a useable group of learning modules by borrowing from existing curric-ula. The third section teaches the normal, daily operation of C-router: how to set up a class roster, see the curriculum, and monitor student progress and performance. The last section teaches how to select lessons from the large catalog of NovaNET lessons sons from the large catalog of NovaNET lessons and build them into a C-router curriculum. It is noted that the second, third, and fourth sections can be used by authors as well as by instructors. Additional information is appended and an index is provided. (DB)

Although there is no federal department of educa-Although there is no federal department of educa-tion in Canada, the Government of Canada supports education by providing funds for certain educa-tion-related activities in the 10 provincial and 2 ter-ritorial departments of education. Because of this financial support, the Federal Government exer-cises a strong indirect influence on the conduct of education at the provincial level and is continuously involved in educational policies. Each of the provincial and territorial departments of education is recial and territorial departments of education is re-sponsible for the organization and administration of education at the elementary, secondary, and post-secondary levels within its boundaries. Because of the diverse racial and ethnic population, each prov-ince and territory has developed an educational sys-tem suited to its historical, social, economic, and political circumstances. Despite the many differ-ences, the 12 educational systems are committed to similar aims including: (1) fostering growth and development of individual students; (2) teaching basic knowledge and skills required for living and learning throughout life; (3) preparing students to become contributing members of society; and (4) providing opportunities to all individuals according to their individual aptitudes, needs, and interests. While no national limage; of education is articulated there national 'image' of education is articulated, there exists a shared image of education as providing practical means for meeting practical ends. With its large territory, small diverse population, two official languages, and notable regional differ-ences, Canada has always been quick to use new communications technologies as they appear, and has historically played a role in their development as well. In each of the 10 provinces and 2 territories, educational films and television programs are avail-able for classroom use. Educational radio programs are provided both by broadcast and on audi are provided both by broadcast and on audiocas-settes. Students use computers in a variety of ways including programming, using software that teaches basic skills through computer-assisted instruction (CAI), word processing, and information access through databases. While each province makes decisions about new educational technologies according to regional needs and characteristics, the primary use of educational technology in the classroom is determined by the individual teacher. Part of the postsecondary educational system in Canada, community colleges offer several types of programs to both students leaving the secondary system and adults who want occupational training or education in the applied arts and human service professions. Like other educational institutions, these two-year colleges have sought to use new technologies both in administration and in teaching and learning. Analyses of the 99 responses received from a survey of 169 colleges conducted in 1983 show that educational film and television and, to a lesser extent, broadcast radio and audiocassettes. Part of the postsecondary educational system in er extent, broadcast radio and audiocassettes, are being used in subjects ranging from sports to science, education, and numerous vocational trades. Additionally, nearly 90% of the colleges have or are developing policies and guidelines for the introduc-tion and use of computers in the classroom. Teleconferencing, videotex, satellites, and interactive video are used to a lesser extent, primarily because

of the cost of the technology. The survey question-naire and a list of responding colleges are included. (4 references) (DB)

This paper examines communications and information technologies and the ways in which they have been used in both the formal and the nonformal education of Canada's native people (four groups: status Indians, non-status Indians, Metis, and Inuits). It is noted that generalizations about the use of technology in native schools is difficult beuse of technology in native schools is difficult be-cause of the varying official status of native popula-tions, different provincial jurisdiction over those populations, and the different languages and cus-toms involved. The first section of the paper con-siders the use of film, video, and computers in formal education settings. The second section briefly discusses the history of native education from 1960 to 1983 and examines federal experiments in nonformal educational applications including radio, satellite, video, and interactive television communications. A mini-revolution in the developcommunications. A mini-revolution in the develop-ment of native-language materials made possible by new developments in microcomputer technology is described, as well as uses of computers, instructional television, teleconferencing, and instructional video in classroom settings. A concluding statement briefly discusses the need for native access and con-trol, the need to exploit the interactive capacity of new technologies, the need for culturally appropri-ate software, the need for further research and fuate software, the need for further research, and fu-ture goals for the education of Canada's native peoples. It is noted that, although educational tech-nologies offer native Canadians the potential for major advancements in formal and nonformal education, there is always the danger that the distinct identity of native peoples may be subverted in the process. This paper examines the history, functions, and impact of the four existing educational communications organizations in Canada: (1) TVOntario; (2) Radio Quebec; (3) ACCESS Alberta; and (4) the Kadio Quebec; (3) ACCESS Alberta; and (4) the Knowledge Network of the West in British Colum-bia. It is noted that, while broadcasting and commu-nications have always fallen under federal jurisdiction, education is the sole responsibility of each provincial government. The overlap between each provincial government. The overlap between these two, in the form of educational broadcasting, necessitated the formation of new regulatory policy. A discussion of the new policy reveals that, while the four authorities may share similar purposes in the provision of educational opportunities to the public, and adhere to a common national programing definition, there are distinct differences among them that are reflected in their roles and functions: (1) TVOntario produces and distributes all educational programs on its television network; (2) ACCESS Alberta (Alberta Educational Communications Corporation) produces educational programs and operates radio stations, but has no vision network of its own; (3) Radio-Quebec distributes educational programming and produces programming relevant to the region's cultural concerns; and (4) the Knowledge Network distributes programming produced elsewhere. It is noted that the Agency for Tele-Education in Canada (ATEC) is an umbella coranization desirand to feeliled. is an umbrella organization designed to facilitate interaction among the four educational communications authorities, including communication, infor-mation sharing, and co-production of programs. This report provides a brief introductory overview of the four communications organizations together with a detailed description of each of the four. (17 references) (DB)

This paper identifies some of the major developments and activities in cable television in relation to education in Canada. It begins by providing a gen-eral overview of the cable industry from 1952 to 1983, including the revision of the Broadcasting Act in 1968 to give jurisdiction over the cable television industry to the newly created Canadian Radio-television and Telecommunications Commission (CRTC). The discussion covers licensing regulations before and after CRTC, pay-TV, and the use of communications satellites to deliver television signals. The report concludes by describing and pro-viding examples of services provided via educational channels and opportunities for community programming offered by cable television systems, including CRTC regulations governing these activities. Videotex in contract to the state of the system of the

Videotex is a generic term used to describe computerized two-way information delivery systems de-signed for simple, mass-market use which provide access to computer-based information via a tele-communications link and an information display, usually a modified home television set. In Canada videotex has become almost synonymous with the name Telidon, which has been described as a high level, efficient communication code for the creation storage, and transmission of graphics and text. Telidon has been used by both academics and corpora-tions in experiments, field trials, and applications tions in experiments, field trials, and applications for formal and nonformal education purposes. Flexi-ble enough for use by people of all ages, Telidon has been applied in computer assisted instruction courses, business and information libraries, information databases, supplements to science and museum educational exhibits, distance education and teleconferencing programs, special education programs, TVOntario educational sequences, and many others. Some of the issues surrounding the use of Telidon/videotex are: (1) the need for more research, development, and evaluation in distance education, special education, and in the broader field of computers in education; (2) the need for support materials and resources; (3) the need for local access to page creation facilities (and inexpensive equipment) and the potentially prohibitive cost of the Telidon/and the potentially produce to the tendon't videotex system; and (4) the effects of Telidon/videotex on privacy, employment, industrial development, technological change, and other 'social impact' questions. mes Satellite, United States

Canada has explored the use of satellites as a means to provide information and communications services to geographically isolated populations since 1962. Between 1972 and 1984, five series of satel-ities known as Anik A, B, C, and D and Hermes were launched. Each satellite provided expanded communications services, and each led to research and experiments in educational applications, some of which included joint ventures with other countries. For example, more than 20 Canadian organizations carried out technical and social experiments with the Hermes satellite, including direct-to-home television and radio broadcasting, tele-education, telemedicine, community interaction, administrative services, and native communications services. Research indicates that communications satellites far surpass their initial purpose of reaching remote populations. Current and future developments include two-way satellite technology, integration of satellites and computer assisted and managed instruction in distance education, and local and regional computer networking via satellite. Among the most important issues re-garding the use of satellites for educational purposes are: (1) determining ownership and copyright of sat-ellite programs; (2) integrating satellite educational services with existing terrestrial distribution systems; (3) determining cost-effectiveness of satellite delivered educational service; (4) evaluating student satisfaction and performance for educational services delivered by satellite; (5) establishing educational satellite consortia on a regional basis; and (6) deciding whether a satellite educational service should have one-way or two-way capabilities. Identifiers—"Canada
This paper describes the development and current state of videodisk technology in Canada. The first section focuses on the technology itself, i.e., the disks, disk players, and the possibilities they offer for interaction between learner and machine. The current costs of the technology and the probable effect of these costs on the market are also discussed. The second section reports on a survey of the research and production of videodisks in Can-ada, and includes a discussion of the contents, educational design, costs, and features of projects completed by ACCESS Alberta, the University of Alberta in Edmonton, Simon Fraser University in British Columbia, and the Ontario Institute for Studies in Education, among others. Issues involved in most of the projects include: (1) the effective design of interactive learning programs; (2) coordination of the team producing the videodisk; and (3) cost of the technology both to produce and to use. It is concluded that, although the potential of the educational videodisk is widely recognized in Candidate that the constraints of the control of the c ada, its wide acceptance as a valid, affordable alternative for educational delivery is still open to quesincluded. This examination of the use of telecommunica-tions systems in the health care field in Canada notes that the use of such systems to assist in the delivery of health care at a distance is critical to the remote and isolated regions of the country. The report begins by reviewing the development of 'telemedicine' or 'telehealth' systems using various combinations of telephone, cable, microwave, and satellite technologies. Examples of such systems are provided by describing three experiments with linking hospitals in remote areas with urban teaching hospitals. The remote hospitals were the Moose Factory General Hospital in the northern district, the Sioux Lookout Zone of northwestern Ontario, and four remote hospitals in Newfoundland. Technologies included linking via the Hermes satellite and/or slow scan television; applications ranged from medical diagnosis and consultation to administration, continuing education for health professionals, and patient treatment. Current telehealth applications in Canada are then described, including programs operating in British Columbia, Alberta, Manitoba, Ontario, Quebec, New Brunswick, and Newfoundland. Issues involved in planning for telehealth programs are also discussed, including whether video is needed in addition to audio, protection of patient-physician confidentiality, remuneration for services rendered via telecommunications, and the need for more expertise and guidance in creating the programs to be transmitted. A look at future directions for tele-health in Canada concludes the report. (20 references) (DB)

This paper reports the results of a survey of a number of high technology companies in Canada who were asked to provide information about their relationship with the educational system, the application of their products in education, and their views on the implications for education in general of the new technology in information and communica-tions. It is noted that the 20 respondents represent cers of educational software, especially grams for computer-assisted learning and authoring languages; telecommunications systems; mainframe and microcomputers; and work stations (some with-out direct application in education). The information provided by the respondents has been grouped thematically. The first section covers the broad theme of the changes in education and society that will be hastened by the integration of the new technology. The effect on the curriculum and teaching methods in elementary and secondary schools is discussed in section 2. The third section considers the relationship between education and training, and how it might change according to the demands of the technological workplace. The fourth section reports on how the special educational needs of high technology employees are being met by the higher education system, while the fifth presents high tech-nology's futuristic vision of education and how that vision might be made more consistent with the promise of technology. The final section examines and critiques the respondents' vision of the influence of technology on education. A list of the 20 contributing companies is included. (DB)

The final paper in a series of 17 studies on new technologies in Canadian education, this report focuses on the issues raised throughout the earlier papers. It begins with a summary of the educational activities in the use of each technology in education, i.e., film, television, and videotape; radio and audio-tape; computer technology; teleconferencing; videotex/Telidon; satellite technology; and videodisc technology. The statements and conclusions in

this summary are based on information, examples, and comments contained in the first 16 papers. Also discussed are issues and concerns relating to the use of technology in teaching and learning; planning for the development of technology in education; and changes in education. Essays written by nine representatives from educational institutions to present a sentatives from educational institutions to present a cross-section of issues, opinions, and research on how learning can be enhanced through the use of technology are then presented; (1) "Views on Technology in Canadian Education" (Joseph Koenig); (2) "Technology in Education for the Future (Catherine Ann Cameron); (3) "Policy Issues Relating to Computer Use in Education" (Tom Rich); (4) "The CAI Dilemma" (Robert J. D. Jones); (5) "The Thorny Question of Software" (Louise Dubuc); (6) "Planning for Technological Changes in Post-secondary Institutions" (James A. Humphries); (7) "Educational Technology" (Denis Hlynka); (8) "Integration and Intelligence" (Michel Umbriaco); and (9) "New Connections between Technology and (9) "New Connections between Technology and Education" (Sylvia Gold). Short biographies of the nine contributors are included. (DB)

The incorporation of media and technology into
the classroom does not ensure the enhancement of

The incorporation of media and technology into the classroom does not ensure the enhancement of student learning. Research has shown that students learn more through active participation in their own learning process. From 1984 to 1987, a teacher's secondary social studies students were actively involved in the National History Day Program (NHDP), one purpose of which is to promote stu-dent competency and interest in carrying out original research. Of the four program categories-paper, project, performance, and media-the media cate-gory was the most popular. Students worked in groups of from two to five to produce videos, dis-solve slide/tape shows, standard slide presentation, computer programs, and overhead projection displays on designated themes. Compared to academi-cally similar students in previous classes using alternative instructional methods, the NHDP stu dents showed dramatic increases in involvement. learning, comprehension, and motivation. They learned how to find, interpret, analyze, organize, use, and present information in creative ways, and they learned skills related to everyday technologies. Participation in NHDP classes became popular with students in the school, more of whom tried to enroll each year although the work involved was extraor-dinary and relentless. In addition to active participation, cooperative group work, intergroup competition, and student choice of project may have contributed to the overwhelming success of the program. (DB)

The declining emphasis on science, mathematics.

The declining emphasis on science, mathematics, and engineering education in the United States together with the necessity of the nation to ensure a continuous supply of trained practitioners in those fields was the consideration that prompted the con-ference reported in this document. The conference participants-who were representatives of the military, the government, industry, and academia, analyzed the potential of distance learning to deal with common educational problems and recommended a common educational problems and recommended a national initiative to implement distance learning in the United States. They also agreed that such an initiative would help to alleviate current global education and training problems. Seven presentations make up the major part of this publication: (1) "The Distance Learning Problem" (Andrew E. Andrews); (2) "Media" (John W. Keller); (3) "Interactivity" (Andrew E. Andrews); (4) "Instructional Strategies" (Mary S. Trainor); (5) "Collective Learning" (Andrew E. Andrews); (6) "Student Performance Evaluation" (Norman D. Hamer); and (7) "Implementation" (John Alexander). It is noted that the results of the conference demonstrated the that the results of the conference demonstrated the need to begin leveraging technology to improve learning. A prologue describing the conference and summarizing the results of group discussions is also provided, as well as a brief epilogue, a list of conference participants, brief biographies of the presenters, and a 44-item bibliography. This document outlines a 2-day training workshop This document outlines a 2-day training workshop that introduces small groups of inservice elementary school teachers to the Apple II GS computer and the database option of the AppleWorks program. The teachers are provided with experience using the database in three separate curriculum areas: (1) science; (2) language arts; and (3) social studies. The workshop consists of two 1.5-hour classes and one 2-hour class. Teachers attend one day of the workshop in the autumn and the second day of the workshop in the spring of the same school year. During the interim between the two sessions, teachers combetted the second of the same school year. the interim between the two sessions, teachers com-plete a data gathering project. Participating teachers are expected to acquire the following skills: (1) ac-cessing previously saved files; (2) setting up new files; (3) printing database files; (4) inserting data into database files and saving them; (5) moving in-formation from database files into other database files and into word processing files; and (6) using common word processing functions. A complete workshop outline is included as well as activities for each of the three listed curriculum areas. (DB)

Designed to assist educators in planning for tech-nological changes in secondary schools, this report presents the findings of a survey conducted in May 1989 to obtain information on the use of microcomputers in Oregon's classrooms. A 46-item questionwas mailed to the principals, computer coordinators, and heads of academic departments at 21 junior and 73 senior high schools throughout the state. Topics of inquiry included questions about teacher training, computer hardware and software, and computer use, as well as questions of a general nature. Results of the data analyses are presented in 28 tables. Based on these analyses, it was concluded that: (1) although regular expenditures on computer technology fall between \$4,000 and \$8,000 annually, school computers have had a limited impact on instruction; (2) the lack of effective use of mi-crocomputers, particularly in the area of instruction, may be caused by the lack of time available to teachers to plan for the use of software; (3) there is a need for continued formal training for both computer coordinators and teachers, and increased opportuni-ties for teachers to borrow school computers for use at home; and (4) the underutilization of existing hardware and software promotes the viewpoint that computers are helpful but not important in the improvement of the learning and teaching process. Dills, Charles R. Grabowski, Barbara Two Research Paradigms for Use with Video-disc-Based Stimulus Material in Research on Interactivity and Media Effectiveness.

Pub Date—5 Jun 90 Note—8p.; Paper presented at the Annual Meeting of the Association for Media and Technology Ed-

of the Association for Media and Technology Education in Canada (St. John's, Newfoundland, Canada, June 9-12, 1990). Pub Type— Speeches/Mecting Papers (150) EDRS Price - MF01/PC01 Plus Postage. Descriptors—Computer Assisted Instruction, *Educational Research, *Interactive Video, Intermode Differences, *Media Research, *Research Methodology, *Videodisks Videodiscs have four characteristics that are valuable to the researcher, namely, that: (1) the contents of the videodisc are permanent, allowing multiple or the violeutes are permanent, allowing multiple repetitions using the same material; (2) the order and sequencing of the material may be changed according to the focus of an instructional program or research study; (3) videodiscs can be integrated with many types of delivery technologies and teaching models pad (4) videodisc on breach by different models; and (4) a videodisc can be used by different investigators for use in replications of an experi-ment. Two research paradigms utilize the advan-tages of a videodisc. Designed to determine the effects of each component of a lesson, the first compares two or more versions of lesson in which the only difference is the component being studied. The second focuses on the interrelationships between instructional components and can be used to relate the components to cognitive styles and other personality ariables in complex interrelationships. It is argued that the use of these paradigms in educational technology research would result in a higher quality of research, and in studies exhibiting more sensitivity to the effects of different versions of components of instruction, than it the components of instruction, than it the components of instruction than it the components of instruction than it the contractions of the components of instructions than it the contractions of the components of instructions than it the contraction of the components of instructions than it is the contraction of the contraction components of instruction than is the case with most currently available studies. This document provides: (1) a synthesis of more than 180 research studies cited in the "Research Windows" column that appeared in "The Computing Teacher" journal between 1985 and 1989, and (2) reprints of the columns themselves. In the synsection the studies are grouped into five genreral categories with various subheadings containing bibliographic references for that specific topic followed by a brief discussion. The categories are: (1) curriculum-related instructional support, i.e., the impact of computers in the traditional academic subject areas of language arts, mathematics, and solid subject areas of language arts, mathematics, and science; (2) computer impact on other learning, with subtopics on database usage, preschool children and computers, Logo, programming (non-Logo), and computer science instruction; (3) software, which includes evaluation and design features such as graphics, types of feedback, and computer-controlled versus student-controlled issues; (4) teacher-focused studies, which include surveys of teachers' attitudes, issues related to teacher training, and factors affecting implementation of com-puters in the classroom; and (5) other topics, including cost-effectiveness studies, research summaries, and gender and computer use. A brief sum-mary of overall trends concludes this section. Section two reproduces the actual "Research Windows" columns which are referenced in the first section. (DB)

This handbook was written to enable elementary school educators to conduct formative evaluations of their computer integrated instruction (CII) programs in minimum time. CII is defined as the use of computer software, such as word processing, database, and graphics programs, to help students solve problems or work more productively. The first chapter provides an overview of computer education and program evaluation, and the second covers planning for evaluation. The third chapter explains how to collect the data to describe the existing CII program. Interpreting the data and answering evaluation questions are covered in the fourth chapter. Finally, the presentation of the evaluation report is discussed in chapter 5. Appendices include copies of questionnaires for seven facets of the integration program, i.e., planning, program description, goals, staff, plans, activity implementation and goal attainment, and strengths and weaknesses. Also appended are a summary of the research procedures and results upon which this handbook is based. The handbook is intended for use by both experienced and inexperienced evaluators to improve an existing CII program and no formal knowledge of program eval-uation is required. (DB)

This book presents reports on selected "local action" projects that were developed as part of the Equity in Technology Project, which was inaugurated in 1985 by the Educational Computer Consortium of Ohio (ECCO). The book is organized into three sections, one for each of the populations targeted by the project. An introduction by Alice Fred-man discussing the equity issue in general and overviews, also by Fredman, of the inequity potenoverviews, also by Fredman, of the inequity potential for each of the three target populations addressed introduce the reports. The first two reports focus on girls; their titles are: "E(P) = ERG (Potential Energy = Enrichment Readiness for Girls: A Science/Computer Project for Sixth and Seventh-Grade Girls: (T. Koontz); and "Sex Equity in Computer Education: An Enrichment Program for Courselve and Eighth, Geld-Girls" (I. Bliten) Mi Seventh- and Eighth-Grade Girls" (J. Elliott). Mi-Seventh- and Eighth-Crade Crits" (J. Eiliott). Minorities and economically disadvantaged students are the focus of the next three reports: "Equity Projects in Inner-City Schools: Working Together in Word Processing" (M. J. P. Boback and others); "Communicating with Computers: A Telecommunications Project" (V. J. Browsh, D. Hatfield, and J. M. Morgan); and "Using the Computer To Increase Academic, Vocational, and Social Skills of Junior High Occupational Students" (A. Fazzini). The last three reports focus on students with disabilities: three reports focus on students with disabilities "Computer Usage by Children with Learning Dis-abilities: An Exploration with First- and Sec-ond-Grade Students" (L. de la Pena); "The Write Way: A Language Arts Program for Orthopedically Handicapped Students" (L. Kuchmaner); and "Hands On-A Training Model for Peer Tutors" (M. Rosenshein). Learning activities, work sheets, a stu-dent survey questionnaire, and evaluation form for trachers are included in the residence of description. teachers are included in the project descriptions, and bibliographies of both the literature and relevant software are provided. This manual is designed to encourage older people to take an active role in local television program production and to design and produce programs that will enhance the quality of life for other older Americans. It is noted that locally produced television offers older people a voice at the local level, the opportunity for making new friends and learning new tasks, and the means for community involvement. The manual is divided into five major sections: (1) Local Programming: Some Background: tions: (1) Local Programming: Some Background; (2) Television Production: The Players (the channel staff, the production crew, the talent, the audience, and a case study); (3) Television Production: The and a case study, (3) reservation reconstruction. Tools (videotape, cameras, players/recorders/editors, the switcher, the film chain, graphics, the set, lighting, audio equipment, the Portapak, and odds and ends); (4) Television Production: The Process (getting started/training, the three Ps, scriptwriting, program formats, legalities, and program promotion); and (5) glossary. A 16-item bibliography is provided as well as brief descriptions of the sponsor-

ing organization, the Institute of Lifetime Learning, and the National Federation of Local Cable Programmers. (DB)

Online searching is a complex problem solving task requiring the searcher to combine multiple sets into Boolean expressions. Since spatial ability has been correlated with problem solving tasks which involve abstract conceptual associations, this report argues that it is a significant factor in the information user's ability to both comprehend and learn human-computer interface (HCI) search dynamics. Applications of route spatial knowledge (i.e., the memory of a sequence of events or the knowledge to execute a given task) and survey spatial knowledge (i.e., the global perspective of the network of events that organizes an activity or task) are evaluated and compared, and the use of spatial imagery in storing and retrieving semantic information is described. Individual differences in spatial ability, which compound the complexity of the system de-sign task, are explored. It is concluded that powerful interface software that addresses human cognitive factors needs to be developed. It is projected that, once this has been achieved, the ability to capture and code expert searcher algorithms and expert in-termediary interview techniques, and to put all of this capability and knowledge into a dynamic interface, will probably not be far in the future. A training module developed following the Instructional System Design model was implemented at Nassau Community College (NCC) to teach its administration, faculty, and staff members com-puter skills that would enable them to use the available computer equipment more efficiently. Using this module, each trainee designed a file to be used this module, each trainee designed a file to be used for the storage and retrieval of data about a single topic using the software package "Q & A," an integrated, menu-driven software package that includes word processing, database management, utility modules, and report-creation capabilities. Gagne's nine instructional events were used to develop the learning activities, and the transfer of skills to the job was incorporated into the training as part of the recognized design Questionnaires were used to secreprogram design. Questionnaires were used to ascertain the trainees' needs, and a formative evaluation of the course materials was conducted. The summaof the course materials was conducted. In estimate verbalistion was based on a questionnaire to measure the participants' reactions to the course, a posttest and checklist combination to measure learning, use made of the database "FILE" on the job to measure behavior changes, and the benefits transferred to NCC offices by personnel using FILE to do their jobs more effectively to measure the results of the course. Additional materials contained in nine appendices include sample instructional material sets and both needs assessment and course evaluation questionnaires. (33 references) (SD)

Descriptors—"Academic Libraries, Higher Educa-tion, Library Administration, Library Collections, *Library Expenditures, *Library Personnel, Li-brary Statistics, *Library Technical Processes, *Research Libraries, Salaries, Tables (Data) This 1987-88 edition of Association of College and Research Libraries (ACRL) statistics presents data from 100 U.S. and Canadian libraries that are

not members of the Association of Research Lib ies (ARL), and are not covered by the annual ARL statistics. The 129 non-ARL libraries that were surveyed for this report were classified by the revised Carnegie classification as "Research Universities" I and II and "Doctorate-granting Universities" I and II. Several libraries that had contributed data to previous editions were also asked to participate. data in this report are based on responses from 101 libraries. For the 70 libraries that had contributed data both in 1978-79 and 1987-88, total expendi-tures more than doubled during the 9 years between surveys, i.e., from more than \$1.8 million to almost \$3.8 million. In spite of an increase of 115% in materials expenditures (excluding serials), the libraries

had a decline of 1% in the number of volumes added. An increase in the serials budget of 170% at these libraries has resulted in an increase in current serials received only 9%. The number of new employees increased by 10.7%, and their salaries increased by 92% while the Consumer Price Index increased by 70%. The data are organized into 17 charts ranking the order of each of the participating libraries for materials and collections (volumes, serials, microform); salaries and other operating expenses, lation; and number of library personnel. Representing the culmination of a project under-

Representing the culmination of a project under-taken at the Louisiana State University School of Library and Information Science, this two-part report evaluates the feasibility of using bookmobiles as a resource expansion mechanism for public libraries in the future, and provides an overview of current bookmobile services. The report, which is based on the results of a telephone survey and a literature review, begins by presenting three bibliographies of bookmobile literature from the United States as well as from international sources. Comprising two-thirds of the document, the bibliographies cover monographs (87 references), reports (53 references), and journals (329 references from 89 unique journals), and are arranged alphabetically by author. journals), and are arranged alphabetically by author. The survey, which makes up the second part of the report, approached a population of 448 libraries known to have provided bookmobile service in 1987. Of the 446 that responded, 440 still provided such service at the time of data collection. It was found that there were between 1,130 and 1,200 bookmobiles in the United States in 1988, and that more than one-third of the major public library systems required beckmobile service, with approxitems provided bookmobile service, with approxi-mately 6% of their total circulation coming from bookmobiles. It is predicted that in the coming decade, collections will include more video and audio material and will emphasize material for children and the elderly. (SD)

Identifiers-Carnegie Foundation

This proposal examines the formation of the Car-negie Library at Union Springs, Alabama, in the context of the rural society from which it grew. It is suggested that the availability of detailed research into the dynamics of this library's formation may help historians identify factors that support the ad-vent of public libraries, regardless of their locations, vent of public libraries, regardless of their locations, and may assist the library profession to better articulate methods to help floundering public libraries. It is proposed that several independent variables be examined in varying depth, including: (1) the confluence of Carnegie's philanthropy with the local philanthropic impulse and civic pride; (2) local leadership from elected officials, library association members, and community leaders; (3) the presence of supporters of the local subscription library and their backgrounds; (4) the presence of enough wealth in the county to support Carnegie's matching funds requirement; (5) the backing of the local newspaper; (6) the influence of populism; and (7) the presence of general cultural factors-e.g., the public library movement throughout the southeast, the growth of public education, and the relative lack of racial and political turmoil. tion (Information)
Identifiers—DIALOG, ERIC

DIALOG Information Services, one of many ven-dors offering the ERIC database as a CD-ROM product (DIALOG OnDisc ERIC), offers end users a choice of searching using either a menu- or a com-mand-driven mode. The menu-driven EASY MENU is intended to relieve the user from learning search commands, and is said to be easier to learn and remember. The command-driven version pro-vides more flexibility and enables end users to avail themselves of the more complete power of the DIA-LOG command system. A questionnaire was given to three groups of graduate education students at the College of Staten Island after they had completed ERIC searches—18 students who used the menu mode, 11 who used the command mode, and 20 who requested online searches by an intermedi-ary. The questionnaire recorded their experiences with the search process, the number and quality of records retrieved, and their overall satisfaction with the search. It was found that users of the menu-driven version were frustrated by the cumber-some steps involved and the amount of time required for their searches. Students in a "new" group, who had received instruction in the basics of com-mand searching with emphasis on the proper usage of Boolean terms, registered less confusion with the search process, and spent less time searching and

retrieving results from their total output. Four ta-bles, a search request form, and a search evaluation form are appended. (48 references) (SD)

Although library buildings often house both li-

Although library buildings often house both li-brary and archival (i.e., manuscript) collections, the approaches to library and manuscript collections are quite different, and obtaining information from li-braries and archives involves different processes. In general, libraries maintain published book and peri-odicals that are duplicated in many places. In con-trast, archives and manuscript collections usually hold unpublished, often unique materials. Libraries organize their collections by card catalogs, indexes, and other research tools; archival materials tend to be organized by type of document-e.g., correspon-dence, business records, or minutes. Authors of published materials address their works to a particular audience, while archival collections include whatever people saved in the course of conducting their business or living their lives. Thus, archival researchers must be particularly sensitive to the consearchers must be particularly sensitive to the con-text in which a document was produced. Archival materials may include records of actions taken or decisions made by people or organizations, photo-graphs or other pictorial materials depicting a par-ticular activity or period, and unpublished primary source materials that can be used to build a case for a particular construction of the past. The researcher should recognize that, for many types of inquiries, archival material is inappropriate and could be mis-leading. For example, the researcher who is trying to understand a particular episode would find it more productive to look in the current published literature than to consult a direct report by one of the participants, which would probably represent only one view and could be biased. Identifiers—Kent State University OH

In 1987-88, a special project was undertaken involving the identification and verification of significant research collections in microform owned by the Kent State University Libraries. This activity resulted in a printed guide, which was updated in 1990 to reflect additional materials and new information. The revised second edition supersedes the first version in its entirety. It identifies new materials and reflects the library's holdings through May 10, 1990. In addition to a foreword and an introduction, there are two appendices consisting of Kent's recently developed policy, and a proposal form that will be used in considering future acquisitions. Over 350 distinct major microform sets are identified in the second edition. Those selected will appeal to users in various disciplines, but especially in Afro-American Studies, English, history, and politi-cal science. The full name of each collection, type of microform, amount of material, and call numbers appear in each entry. The inclusion of the name of the repository that owns the original materials listed will prove of particular value to advanced researchers. Most of the collections that were selected contain this information. Where available, finding aids to be used in conjunction with a collection are also included after the entry. Both editions were sponsored under the auspices of the Reference Department, Kent University State Libraries. (Author/SD)

Identifiers—Mass Describination
This report provides technical and scientific information useful for planning a mass describination program and choosing mass treatment processes to preserve library and archival paper-based collections. Aimed at institutions investigating mass describinations. acidification as a preservation alternative, the document explains technical and other related factors that decision makers need to consider, as well as a rationale for considering them. The most con-servative path to decision making is advocated, with maintaining the safety of the collections given the highest priority. Basic background information out mass deacidification processes is then offered, and reasons for their development are explored. Ways in which mass deacidification differs from single-item treatment are discussed together with the particular challenges of choosing mass processes. Major emphasis is placed on in-depth analyses of six technical evaluation factors: (1) effectiveness of de-acidification procedures; (2) unwanted changes in materials; (3) process engineering; (4) extra benefits from specific processes; (5) toxicity; and (6) environmental impact. Other evaluation issues outlined include unit treatment costs, book and document security, logistical considerations, long-term vendor

performance and contracting, observation of facility operation, and liability. Brief explanations of organizational and planning considerations that are of pri-mary importance to the total mass deacidification effort are appended. (SD)

Management guidelines for library planning and a
strategic planning program profile based on the literature were used in the planning process for implementing access to databases on CD-ROM at the
Daniel Library of the Citadel, Military College of
South Carolina. According to this model, the planning process would consist of five stages: (1) organizing a departmental automation planning committee; (2) conducting a needs assessment; (3) commune; (2) conducting a needs assessment; (3) producing a planning document; (4) evaluating hardware, software, databases, and contracts; and (5) establishing management, training, and use policies. As the planning process evolved, however, the cies. As the planning process evolved, however, the needs assessment was not prepared as completely as it might have been and a formal planning document was not produced. Evaluation was limited to hard-ware and databases, a review of vendors was not completed, and the details of licensing and subscription contracts were not examined. An evaluation questionnaire was not created, with the result that feedback that might have been helpful in establish. feedback that might have been helpful in establishing policies was lacking. It is concluded that in future planning, a designated task force should pre-pare a proper planning document, including background, goals and objectives, and a strategy that has involved environmental considerations and alternative possibilities. It is further recommended that the library automation committee should represent the library on the college-wide computer services committee to provide a critical link between the library and the other information and computing units of the college. Identifiers—Information Policy, Office of Management and Budget, *Privacy Act 1974
In this policy briefing, the technological developments of recent years are linked to the erosion of individuals' informational privacy under the press of bureaucratic efficiency and the ever-growing needs of executive agencies for more information. It is need that privacy receives within federal action. of executive agencies for more information. It is noted that privacy protection within federal agen-cies may entail costs, and therefore, may be viewed as a constraint upon or impediment to the agency's mission. Discussion of these considerations points out that the Office of Management and Budget

(OMB) is not likely to actively enforce privacy constraints because its purpose is to pursue cost reduc-tion. It also indicates that data subjects themselves are largely unaware of potential privacy threats posed by information and technology practices, and that they have not organized into a constituency to that they have not organized into a constituency to focus on the issue. It is concluded that the Privacy Act of 1974 has not accomplished its mission, and that there is no existing device to adequately deal with privacy matters. It is proposed that Congress establish an independent agency charged with the responsibility of protecting federal information privacy. Related constitutional issues are raised, the general contours of an effective privacy protection general comounts of an energy protection mechanism are explored, and the makeup of data protection agencies in Canada, Federal Republic of Germany, France, Sweden, and the United Kingdom are briefly reviewed. work Reduction Act 1980 During the past decade the Federal Government has significantly retreated from its historical responsibility to maintain the free flow of information that is essential to maintain a healthy democracy. This is essential to maintain a healthy democracy. This responsibility includes the collection of basic data on the health of the economy as well as the dissemination of information that assists and propels public debate. The Office of Management and Budget (OMB), which has wide-ranging authority over Federal information activities, is the agency primarily responsible for discouraging the flow of public information. It has failed in its mandate to improve Federal information resources management (Circumston resources)). Federal information resources management (Ĉircular A-130), deferring to private sector businesses instead of helping agencies to plan for the new elec-tronic information age. Two areas in which OMB has exercised control over Federal information activities are paperwork reduction and information resources management, and management of Federal information dissemination through reductions in printing of government publications and the privatization of government information dissemination. zation of government information dissemination. The consequences of these curbacks in information activities have been magnified by the current revolution in information technology. Efforts should be made to: (1) articulate a national information policy; (2) reform legislative direction and oversight; (3) reduce centralized political control of Federal agency information activities; and (4) strengthen the capabilities of Federal agencies to control their information activities. Congress and the President must work together to redirect Federal information policies and practices if the free flow of public infor-mation is to be ensured. (SD)

The rapid growth and distribution of scholarly research in the middle and late twentieth century, the

limited supply of old books and other paper-based

materials, and the deterioration of items printed on acidic paper since the mid-1800s have meant that many libraries lack suitable copies of printed sources that their users would like to read. For some time, libraries have converted books, journals, and newspapers to forms that are more stable, easier and newspapers to forms that are more states, easier and cheaper to copy, and more compact. The most im-portant such form has been microfilm, which is con-sidered a safe, durable, and inexpensive preservation option. Digital imagery is now seen as a viable alternative that offers long-term promise, and is rapidly becoming more accessible to libraries. This report compares digital and microform imag-This report compares digital and microform imagery and emphasizes that making either kind of copy is preferable to leaving acidic paper to decay. Topics addressed include: (i) preservation alternatives, including chemical deacidification, microform, digital imagery, and ASCII (non-image); (2) storage considerations-i.e., magnetic disk, optical WORM (write-once-read-many) disk, digital videotape, digital audiotape, conventional magnetic tape, CDROM, magnetic-conteal erasable disk, and digital videotape. ROM, magnetic-optical erasable disk, and digital paper; (3) conversion considerations; and (4) transmission considerations. It is concluded that, because microfilm to digital image conversion is going to be relatively straightforward, and the primary cost of either microfilming or digital scanning is in selecting the book, handling it, and turning the pages, librari-ans should use either method as they can manage, expecting to convert to digital form over the next

Integrating comments from the literature about

Integrating comments from the literature about CD-ROMs, online searching, and information retrieval, this report describes the initial experience of using InfoTrac at Winona State University (WSU). After finding that students did not tend to order fee-based online searches, the WSU library provided access on a trial basis to bibliographic data-bases via CD-ROM. After evaluating a number of systems, the library chose InfoTrac because it seemed to be user-friendly and it came equipped with its own hardware. Students in English Department courses were alerted about the new system's arrival because it was thought that InfoTrac might be particularly useful to them. A questionnaire de-signed by InfoTrac was administered to users. The 50 positive responses (out of 51) reflected that the system was easy to use and searches yielded favor-able results. The one negative comment remarked on InfoTrac's inability to use Boolean logic. The WSU periodicals department observed that students working on assignments in basic English composition courses tended to rely exclusively on InfoTrac for their research, while upper-level students began their searches with InfoTrac but then moved on to provide the property of the provided of the provid specialized printed indexes for more articles. As a result of the trial, it was decided to keep the system. result of the that, it was decided to keep the system. A copy of the user questionnaire is attached, and an addendum notes that the library has since acquired a reference workstation from InfoTrac that contains the General Periodicals Index (Academic Version) and SilverPlatter ERIC. A reference list provides 36 endnotes. (SD)

Neither the design of information systems and networks nor the delivery of library services can networks nor the delivery of library services can claim true user centricity without an understanding of the multifaceted psychological environment of users and potential users. The complexity of the political process, social problems, challenges to scientific inquiry, entrepreneurship, and technological competition is the underlying characteristic of the present information environment. Information professionals must learn to live with complexities in order to strengthen the positive forces in society, to create optimal situations exploiting knowledge on behalf of individuals and society, and to fight persistent problems with all available tools of knowledge. Research into information requirements and the in-Research into information requirements and the in-terrelatedness of different cognitive processes is probably the most needed research for future policies and systems. Information scientists, librarians, information resources managers, archivists, records managers, information counselors, and other roles emerging in response to the complex information market must reach out to each other and bridge the divisive lines of professional roles to sustain professional values and ethical approaches to complex information issues. Such issues include the challenges presented by multicultural local communities, the globalized world economy, the need for unbiased facts for the nonscientific or nonlegal information user, rapid and powerful advances in information disciplinary solving of social and economic prob-lems. Identifiers—Australia, Open University (Great Britain), University of London (England)

This report recounts the experiences of an Austra-lian librarian who spent five months in England, where she visited the University of London and the Open University for discussions on library services to external students in order to: (1) gain practical knowledge of the work and responsibilities of the Open University Liaison Librarians and their assistance in the preparation of teaching materials; (2) gain an understanding of the library networks estab-lished for and used by distance education students; and (3) do research on the development of library services to teaching staff and students of noncredit university courses designed solely as continuing ed-ucation (i.e., extramural) units. The librarian also visited 15 university departments of continuing education, 11 other academic libraries, and 7 public libraries, and contacted many British librarians through seminars, professional groups, and commit-tees. This report describes her findings and discusses the applicability of some of the features of the British system to the situation in Australia. A discussion of the future of library support services for distance education students in Australia concludes the report. A list of the institutions visited in Great Britain is appended. Descriptors—Administrative Policy, Information Dissemination, *Interlibrary Loans, *Library Collections, *Library Collections, *Library Collections, *Library Rote, Library Services, *Shared Library Resources, *Technological Advancement Librarians' work has become more challenging and complex over the past 15 years. Fifteen years ago, the telephone was a librarian's most used and most effective instrument, and librarians mostly re-

st effective instrument, and librarians mostly relied on the resources within their own walls. In that era, resource sharing placed substantial burdens on larger libraries, and the resources of smaller libraries were not adequately realized or utilized. Now, the growing coverage of machine-readable files has growing coverage of machine-reasons into an ameant that resource sharing has the potential to be a more evenhanded burden, since librarians have a better grasp of the multiple locations of materials that would have remained unknown in the past. In the near future, technologies-e.g., electrocopying
-will create new conceptions of resources and methods of information accession, and librarians must master those techniques to best serve their patrons. In the meantime, the success of resource sharing pivots on academic, public, school, and special li-brarians' willingness to work together and cooper-ate. If it is necessary to look outside their own collection, librarians must ascertain whether the patron wants the information quickly (and expensively) by fax machine or more slowly (and less expensively) by interlibrary loan. Identifiers—Kent State University OH, Pathfinders
This document was developed primarily in response to a bibliographic lecture in an upper-divisponse to a bibliographic lecture in an upper-division Afro-American survey course that covers the American colonial period to the present. In addition to representative examples of reference works, bibliographies, bibliographies sources, and periodical indexes, a section is devoted to the proper use of "Library of Congress Subject Headings." Kent State University's online catalog, CATALYST, is part of the NOTIS system and uses a controlled vocabulary which is detailed in the "Subject Headings" volumes. Neither keyword nor boolean searching is available, nor does the system allow for related headings. Consequently, uninitiated users can experience frustration when the phrase "NO SUBJECT HEADINGS FOUND" appears of the screen. As detailed in Section A of this document, the use of the heading "Afro-American" is very useful for illustrating many of the nuances inherent in a struc-tured and controlled vocabulary. A written description was incorporated into the bibliography because of the specific course, but the example has proven very useful in other bibliographic presenta-tions for educating students in the subtitles of "Li-brary of Congress Subject Headings." The other portions of the document are designed to acquaint students in Afro-American history with other major sources of information for their written projects.

The development, testing, introduction, evalua-tion, and refinement of a user interface for a state-wide, multi-library online public access catalog network can be a very involved and politically complex enterprise. A multitude of perspectives, as-sumptions, preferences, and needs accompanies the multitude of players involved, i.e., library administrators, personnel, and users from a range of library types. As a user interface is being created, system igners should take into account user needs and

the political climate within which the system will operate, in addition to considering the operating system and telecommunications requirements. On line network systems must be developed through three-way interaction among users, library staff, and the systems designer, not simply by the designer for the librarians. To approach political difficulties aris-ing from varying interests of different libraries participating in the network, a system-wide board of directors or council of librarians should be established, representing all types and sizes of libraries. The loss of autonomy and some of the attributes of a single library online catalog, with its unique interface, can be offset by the advantages of a compre-hensive multi-library online catalog network and generalized interface, which should accomplish the goal of meeting the users' information needs. A series of recollections, memoirs, and anecdotes,
this short autobiographical sketch focuses on former this short autobiographical sketch focuses on former American Library Association (ALA) President Robert Vosper's involvement in the international library community from World War II until the 1980s. The work opens with reminiscences of acquiring foreign materials in 1944 while working at the University of California at Los Angeles. One story recalls how an order for the last installment of a publication from England arrived 6 years late of story recalls how an order for the last installment of a publication from England arrived 6 years late, ac-companied by an apologetic note explaining that it was delayed because (1) all of the type had been destroyed by air raids, and (2) some of the newly set proofs had later been lost at sea. Tales are shared about the founding of the Farmington Plan, which about the rotating of the rainingoil rain, which helped coordinate academic libraries' acquisitions, and about several of the key players in this effort who would later turn up as leaders in various positions within the library community. Vosper also relates his experiences as a Guggenheim Fellow Great Britain and Italy, his association with the U.S. Information Service, and observations on his experiences while touring libraries throughout Western and Eastern Europe. Much of the narrative is de-voted to Vosper's orientation to and high level of activity in the International Federation of Library Associations, and provides insights into the development of this organization. Questions presented in workbook format are interspersed with quotations from the literature about the library profession's stereotypes and self-image. The document opens with a synopsis of how librarians are portrayed by the mass media. Exercises ans are portrayed by the mass media. Exercises about role perceptions are presented (e.g., define the terms "librarian" and "information manager" and explain whether the terms are interchangeable). Gender stereotypes are also explored. The function and success of the Library Association of Australia (LAA) in promoting and managing the profession is discussed and a list of questions is included that ask LAA members to consider what they are contributing to the profession. Other topics include: "Your Self-Image"; "Changing Your Own Image within Your Own Organisation-Be Your Own Publicist"; "Personal Power"; "Communication; "Library Staff"; "Service Provision"; "Service is a State of Mind"; "Marketing," "Marketing the Service"; "Our Future Users"; "School Librarians"; "Public Librarians"; "Special Librarians"; "Academic Librarians"; "Special Librarians"; "Academic Librarians"; "Special Librarians"; "Academic Librarians"; "Special Librarians"; "A Personal Marketing Plan"; and "The Last Word on the Stereotypical Image." A self-help exercise on salary levels is also included. (15 references) (SD)

IR 053 312 chool District Information Study. Planning for the Management of Information through Tech-nology. A Planning and Staff Development Project.

New York State Education Dept., Albany. Div. of Elementary and Secondary Education Planning. Pub Date—Feb 90

Note—73p.

Descriptors—Computer Networks, Elementary Secondary Education, *Information Manage-ment, *Information Technology, *Long Range Planning, Needs Assessment, *Personnel Needs, Purchasing, *School Administration, *School Purchasing, *School Administration, *School Districts, School Surveys, State Programs Identifiers—Boards of Cooperative Educational Services, New York

Designed to provide assistance to school district personnel who seek to develop a plan for informa-tion management and related applications of tech-nology, this guide presents the School District Information Study (SDIS) model for the review of gement policies, procedures, and activities related to information processing done by school dis-trict staff. In this model, data are gathered, needs are articulated, recommendations are developed, and a plan for implementation is produced. The study foes on how information is processed in all sectors of the school district and on the integration of ap-propriate technology for managing that information. While districts can use all or part of the process, and the procedures may be altered to accommodate the unique situations in each school district, it is strongly recommended that the Regional Information Center resource person be contacted initially for guidance and consultation. The project goal is addressed in four stages which correspond to the four stages of the process: (1) planning for the study; (2) development of district needs and recom-mendations; (3) production of a plan; and (4) implemencations; (3) production of a pian; and (4) implementation of the plan. A summary of the suggested roles for participants in an SDIS is given, followed by individual listings of the 11 procedures included in the 4 stages. Each of these listings includes the person(s) involved and suggested actions. The appendices, which make up more than half of the document, include various supporting documents, forms, a questionnaire, worksheets, sample letters, national materials. (SD)

In August 1989 the Committee on Automated In August 1989 the Committee on Automated Reference Service of the New York State Library conducted a use study of their CD-ROM workstations to determine: (1) the extent of user satisfaction resulting from CD-ROM searches at the New York State Library; (2) the ease of using CD-ROM as an information retrieval source; (3) whether training was adequate at CD-ROM stations; and (4) whether CD-ROM products meet user needs. Data were gathered from 77 respondents through a 7-item questionnaire focussed directly on understanding and evaluating the patron's needs and expectations. nd evaluating the patron's needs and expectations Although demographic information was not solic-ited, respondents were expected that patrons would be students, government employees, members of the general public, and library staff. The data were analyzed first by tabulating responses into groups and representing them in graph form; then by sum-marizing comments and suggestions; and finally, by computing the non-parametric method using the chi-square statistic. It was found that 41% of the cm-square statuse. It was found that 47% of the respondents were greatly satisfied with their CD-ROM search, 56% found the instructional meterials adequate, 63% received adequate training, and 91% will use CD-ROMs in the future. Recommendations include: establishing a CD-ROM help desk; making available command cards to supple ment the instructional materials; distributing promotional materials to encourage CD-ROM us having more staff on hand to assist users. (A copy of the survey questionnaire and 12 references are included.) (SD)

Surveys, Theory Practice Relationship, Two Year Colleges, Universities Identifiers—*North Carolina Over the past 25 years, five large-scale research studies of community college students have been conducted in North Carolina, involving cooperation between Duke University, North Carolina State University, and the North Carolina Department of Community Colleges. The different research strate-Community Colleges. The different research strate-gies employed in these studies can be seen as taking one of three forms: the Traditional Researcher Dominated Strategy; the Researcher Dominated with Limited Client Involvement Strategy; and the Researcher-Client Collaborative Strategy. By examining and contrasting these three approaches, referred to collectively as "action research" strategies, this paper seeks to identify the specific strategy that provides for optimum levels of involvement, impact, and overall effectiveness. After an introductory section, the paper reviews the essential principles and concepts of action research and presents a model identifying strategies which would maximize the linkages between the university researcher, community college administrators, and the sponsors or the research. The list of the critical stages in the action research process identifies the following eight steps: (1) legitimization of the effort; (2) problem defini-tion; (3) development of the plan; (4) data collection and preliminary analysis; (5) feedback to the client group; (6) joint diagnosis and planning; (7) action; and (8) evaluation. The paper then uses these eight stages as criteria to evaluate the three different restages as criteria to evaluate the three different re-search strategies. Examining extent of usage of study results, comparisons of study impact, com-ments from college and system staff, and study re-sponse rates, the paper concludes that the Researcher-Client Collaborative Strategy, involving the constitution of system and college permore direct participation of system and college per-sonnel and more direct application of study results, is the optimum model. In the fall quarter of 1988, a survey was sent to 20,047 students enrolled in North Carolina's 58 community colleges to gather information on stu-

community colleges to gather information on stu-dent demographics by major, students' reliance on the community colleges as an avenue for furthering their education, the impact of commuting distance on attendance, patterns in college choice, the impact of various recruitment strategies, financial aid recipients and sources, students' employment status and future plans, transfer students' characteristics, and reasons for community college attendance. The study sought to update prior studies of community college students and detect changes in student pro-files over the past 25 years. Usable questionnaires were received from 16,196 curriculum and continuing education students for an 81% response rate. Study findings included the following: (1) within the curriculum programs, female enrollments increased

from 32% in 1968 to 62% in 1988; black enrollments from 22% in 1988 to 62% in 1988; black enrollments increased steadily through 1979, then decreased by 4% between 1979 and 1988; the proportion of older students increased; and the enrollment of highly educated students increased; (2) the profile of continuing education students showed similar increases in female, minority, older student, and educated student enrollments; and (3) in comparison to the state's adult population as a whole, the community college student population included a disproportionately high number of females and whites, and a disproportionately high number of females and whites, and a disproportionately high number of females and whites, and disproportionately low number of males, blacks, and adults with less than a high school education. Profiles of students by curriculum division are included. (PAA)

-Mohawk College of Applied Arts and

Technology ON

In an attempt to combat the problem of poor writing and problem-solving skills among technical pro-gram graduates, Mohawk College of Applied Arts and Technology in Ontario, Canada began impleand Technology in Ontario, Canada began imple-menting changes in its Computer Studies curricu-lum. The first change was a greater focus on improving students' writing skills. Writing assign-ments were developed to be relevant to students' chosen field of study and future career, and were evaluated by both faculty and students. Another important change to the Computer Studies program was to augment the content-driven technical courses with the teaching of actual problem-solving was to augment the contenturivent technical courses with the teaching of actual problem-solving skills. A model was developed for incorporating problem-solving strategies into the computer programming curriculum through a three-step process. The students: (1) define the nature of a programming curriculum through contentuation of the programming curriculum through contentuation of the programming curriculum through contentuation. ming problem in their own terms; (2) reformulate a problem and its proposed solution through a clear and unambiguous sequence of steps; and (3) trans-late the solution into a language (or "program code") which can be fed to the computer for action. This three-step model has been used in courses in Programming Methodology, Interactive Programming, and Computer Hardware Organization and Function. An appendix provides sample writing, problem-solving, and lab assignments for use in the computer studies classroom. (JMC)

Vocational Education Identifiers—*Sacramento City College CA Sacramento City College (SCC) is enrolling a growing population of minority students requiring English-as-a-Second-Language (ESL) training. This shift in demographics has resulted in two major challenges for SCC faculty: a visible language barchainenges for Sect factors, a visible language bar-rier between them and their students, and also a more subtle and critical "culture conflict" between faculty and students. While early college ESL ef-forts, such as tutoring and special courses, were di-rected at the students themselves, more recently, a new program has been developed to address the needs of faculty. Faculty were recruited to partici-pate in the training program and queried on their perceived needs. A handbook was developed to serve as the text for an inservice training program. e I of the project consisted of a 2-day so workshop for full-time faculty, focusing on the lan-guage and cultural barriers facing ESL students and guage and cultural barriers facing ESL students and ideas for developing customized teaching strategies to meet the unique needs of these students. In phase II, which involved both full- and part-time faculty, a 1-day workshop was held during the semester break, focusing on cultural conflict and its resolution. Phase III brought ESL and vocational faculty together on the development of a vocational ESL (VESL) course emphasizing listening comprehension. As a result of concerns about vocational students. sion. As a result of concerns about vocational stu-dents' failure to enroll in ESL courses, SCC initiated an enhanced and expanded counseling/orientation-/assessment program to insure a higher level of participation in appropriate ESL courses by vocational education students. The new program will include early identification of ESL students in the admissions process, use of multiple assessment instru-ments, and targeted orientation and counseling. Ethnic enrollment data tables are included. (JMC)

Just as medical practitioners have professional associations to safeguard the public from poor doctor-ing, so too should the community college teaching profession be guided by a national association to oversee teachers' performance, especially given the tremendous role teachers play in an individual's detremendous role teachers play in an individual's development. Achieving the degree of professionalism reflected by the presence of such national associations would require the ascension of several levels of occupational professionalism. From the most simple to the most complex, these levels are: (1) occupation, where employment results in one's primary source of income; (2) commitment to calling, acceptance of the profession: (3) and identification with one's neers and the profession: (3) the profession of the tion with one's peers and the profession; (3) the identification of distinctly occupational interests; (4) a readily apparent body of knowledge; (5) service orientation that transcends personal concerns in the interest of the community; and (6) professional autonomy restrained only by responsibility. The community college teaching profession has not progressed beyond the first step. For teachers to obtain higher levels of professionalism would create more respect between faculty and administration; greater recognition in society; and clearer performance standards to which they could strive. A lack of professional identity and lack of a defined body of knowledge have most hindered this professional attainment. A three-stage model for planned change that could be applied to the professionalization of community college teaching involves creating the motivation for change, actually changing, and firmly maintaining the resulting attitudinal improvements. In April 1990, the American Association of Community and Junior Colleges and the National Center for Academic Achievement and Transfer conducted a national survey of 1,366 regionally accredited, de-gree-granting, two-year public and private colleges to identify practices used to foster and encourage student transfer to senior institutions. Institutions were asked to describe the frequency with which were asked to describe the requestry with which they employed various transfer strategies, their method of identifying transfer students, and their approach to calculating institutional transfer statis-tics. Study findings, based on a 39.4% response rate, included the following: (1) the institutions utilized written articulation agreements (85%), course equivalency guides (81%), and transfer counselors (81%); (2) additional transfer strategies employed included joint degree programs, dual registrati transfer information centers, intercollegiate rela-tions commissions, and guaranteed admissions to receiving institutions; (3) the most popular methods used to identify students who transferred were graduate follow-up surveys, estimates/guesses, state re-porting systems, documentation of transcript requests, and information obtained from senior institutions; and (4) most institutions based transfer statistics on recent associate degree graduates or students enrolled in transfer curricula, producing higher transfer rates than institutions considering the entire student population in estimating transfer rates. Recommendations for future research are included. (GFW)

In an effort to provide statistical support for more stringent attendance policies, a study was con-ducted at McCook Community College (MCC) to determine whether there was a significant relationdetermine whether there was a significant relation-ship between absences and grades in freshman com-position classes. A literature review of similar studies conducted at both the secondary and post-secondary levels found some evidence of a negative relationship between classroom absenteeism and academic performance. Data were drawn from the grade and attendance books of one instructor for three English 101 sections taught during fall semes-ters 1987, 1988, and 1989. Final semester percent-age grades were calculated for those who missed class from one to three times and for students who missed class from four to seven times. Students who had no absences or more than seven absences were excluded. The major conclusion derived from the study was that an MCC composition student who was absent from class one to three times would receive a final semester percentage grade that was significantly higher than a student who missed from four to seven classes. Based on study findings, it was recommended that faculty take regular attendance and reduce grades for more than three absences.

Descriptors—*Allied Health Occupations Education, *Classroom Techniques, College Freshmen, Community Colleges, Cooperative Learning, Dental Hygienists, Discussion (Teaching Technique), *Learning Strategies, Lecture Method, Peer Teaching, Student Attrition, Student Journals, Two Year Colleges, Vocational Education Identifiers—*Bergen Community College NJ In an effort to curb high first-year attrition rates and to motivate students from a state of passive learning to one of active participation, Bergen Com-

learning to one of active participation, Bergen Comlearning to one of active participation, Bergen Com-munity College implemented a program of peer teaching-learning and group inquiry strategies in a preclinical dental hygiene course. To determine freshman students' learning styles, the following tools were employed: weekly student interviews; a checklist of interests and skills; interest in the sylla-bus; background knowledge probes; journal-keeping by students; autobiographical sketches; study habit inventories. In addition, a colleague visited the classes to observe students' learning styles, take notes on the classroom environment, and assist the notes on the classroom environment, and assist the instructor in zeroing in on class reactions to planned teaching strategies. As the semester progressed, the traditional lecture format was increasing replaced by group inquiry and collaborative learning. For exe, after new instruments were briefly introduced in lectures, the actual use of the instruments on manikins and fellow students was learned through the group inquiry strategy. Student interviews and journals indicated that students were more comfortable learning from each other, and that they learned the usage of instruments at a faster pace. The instructor emerged as a resource person rather than an authority figure. Peer involvement diminished competitiveness, fostered professional partnerships, reduced anxiety, increased motiva-tion, and facilitated active involvement in the learning process. (JMC)

Identifiers-Paradise Valley Community College

This report details the process undertaken at Para-dise Valley Community College (PVCC) to develop a content-valid questionnaire to identify the instructional training needs of full-time college faculty. Chapter I discusses the background to the project, reviews the goals of the Employee Development Program at PVCC and stresses the importance of identifying faculty training needs in order to create effective development efforts. Chapter 2 provides a review of the literature on survey strategies and methods, sample size, and effective questionnaire development. Chapter 3 discusses the methodology and procedures utilized in developing the questionnaire, including the formation of a review committee, involvement of three research experts, and field testing of the questionnaire among 5 full-time faculty. Chapter 4 presents the results of the survey uity. Chapter 4 presents the results of the survey instrument development efforts, describing the goals of the questionnaire which included obtaining information on instructional methodology workshops which faculty would be interested in attending and faculty time slot preferences for workshops. Outlines of potential workshops and strategies for disseminating the questionnaire and analyzing the results are included in this chapter. Chapter 5 disseminating though a presents recommendations. cusses implications and presents recommendations for implementing the faculty survey. The questionnaire, a sample data sheet/answer form, and a copy of the questionnaire cover letter are appended.

Designed to answer those questions most fre-quently asked about the Washington Community Colleges by members of the legislature, state and external agencies, citizens, college administrators, faculty and students, this report presents data on enrollments, personnel, facilities, and finances for fall 1989 and the 1989-1990 academic year. Introductory material provides a history of the system, a student enrollment profile, and an analysis of course offerings by purpose. Section I of the report presents enrollment data, including annual headcount and full-time equivalents (FTE's); headcount by funding rull-une equivaents (F1 E S), readcount by funding source, full-/part-time status, sex, age, and race; and information on annual FTE's by funding source, course intent, day/evening attendance, and college. Section II provides the following personnel data FTE faculty by employment status and college; and FIE tacuty by employment status and cotlege; and classified employees by employment status, assign-ment area, and college. Section III deals with facili-ties and capital funding, including a facilities inventory summary, appropriations of capital funds, and data on campus size. Section IV presents financial data, including: (1) summary profiles of sources of revenue, the budget, appropriations, and alloca-tions processes, limitations of expenditures, and expenditure categories; (2) expenditures by source of funds; (3) costs per state-funded FTE's; (4) expenditures by program and object; and (5) federal vocational funds and allocations. Information on full-time undergraduate student tuition and fees, statistical publications, definitions, and additional historical enrollment information is appended.

Over the past 10 years, Austin Community College (ACC) has expanded college offerings from 41 degree programs, 24 degree options, and 1 certificate program to 60 degree plans, 35 degree options, and 22 certificate programs. In addition, ACC has grown from an enrollment of 13,000 credit students to over 24,000 students. During the past 5 years, minority full-time faculty have increased from 12% to 20% of the faculty. Changes in the economy, growing enrollments, demands of local businesses, new legislative mandates for minimal skills competency among degree students, and lagging state funding require careful planning to meet the institu-tion's future needs. Consistent with its focus on ac-cessibility and flexibility, ACC has plans to: (1) initiate new curricular programs in service sector occupations; (2) become a continuing education center for governmental employees; (3) develop a pre-education curriculum for future teachers; and

(4) include an entrepreneurship track in the mid-management curriculum. To help meet the demands for a world class workforce, ACC will develop articulation agreements with independent vetop articulation agreements with independent sechool districts and adopt a core requirement in computer competency. To better fulfill its fourfold mission of quality, flexibility, accessibility, and diversity, ACC will implement an honors program, an international studies curriculum, 2 + 2 programs, and a mentoring program for underprepared stu-dents. Other college goals include increasing the number of minority instructors, developing a minority leadership program, and establishing a mentorship program for minority secondary school students. In an effort to identify effective transfer practices appropriate to different community college circumstances, and to establish a quantitative database that would enable valid comparisons of transfer between their 28 member institutions, the National Effective their 26 memoer institutions, the National Effective Transfer Consortium (NETC) sponsored a survey of more than 30,000 students attending NETC col-leges. A database was created containing responses from 14,000 students, representing a 44% response rate. Additional data were added on ethnicity, gender, age, and enrollment status on all credit er ees from each member college for spring and fall 1988, amounting to information on almost 300,000 students in 13 states. This report presents the results of the first year's research efforts of the NETC. Chapter 1 reviews the inadequacies of the most common current approach to measuring transfer rates, proposes a new definition of transfer rate, and presents findings from the study in support of the new measurement. Chapter 2 uses data obtained from the NETC colleges to illustrate the possibility of calculating an expected transfer rate range for any college or group of colleges. Chapter 3 considers the different propensities to transfer of differ-ent types of students, and discusses a new way to measure transfer effectiveness based on this insight. Chapters 4 and 5 review organizational issues and transfer practices and strategies that colleges must consider in order to achieve high transfer effectiveness. Chapter 6 sketches a specific approach col-leges can use to enhance their transfer function. Appendixes contain an overview of the study methods, the questionnaire, and a brief portrait of each of the member colleges of NETC. (GFW)

Data on student enrollments in the 17 regional community colleges and state technical colleges in Connecticut are provided for fall 1989 and spring 1990. Introductory material highlights the following findings: (1) the combined community-technical colleges are the largest unit of undergraduate higher

education in Connecticut, serving 48% of all underequication in Connecticut, serving 48% of all undergraduates in the state; (2) in fall 1989, the colleges enrolled a total of 44,270 students, representing a 7% increase over fall 1988; (3) in spring 1990, head-count enrollment was 41,658, while full-time equivalent enrollment was 19,189; (4) 76% of the fall-1989 students were enrolled part time; (5) 56% of 1989 students were enrolled part time; (5) 36% of the students were over 24 years of age; (6) the average student age was 33 for part-timers and 22 for full-timers, with a slightly higher average age for community colleges than technical colleges; (7) in fall 1989, community college enrollments were 68% female and 32% male, while in technical colleges, the majority (82%) of students were males; (8) minority student enrollment increased 0.5% in community colleges and 1.5% in technical colleges between 1988 and 1989; (9) among minority stu-dents, 56% were Black and 32% were Hispanic; and (10) in fall 1989, 43% of all students were enrolled occupational programs, with the largest enroll-ments in Business and Data Processing at the com-munity colleges, and Electrical Technologies at the technical colleges. The bulk of the report consists of data tables, presenting enrollment data for each of the 17 colleges broken down by full-/part-time sta-tus, general fund or extension status, gender, ethic group, age distribution, and program enrollments. Additional information on geographic distribution of funding, and associated degrees and certificates awarded is included. (GFW)

to strengthen transfer education through attention to academic practices. The grant program was open to institutions located in the 50 largest cities in the to institutions located in the 20 largest cities in the United States. To be eligible, two-year schools needed to sustain a Black or Hispanic enrollment of at least 20%, while four-year schools had to have community college transfer students make up at least 10% of their most recent graduating classes. The 13 Partnership Grants were awarded to 26 institutions in the cities of San Antonio, Texas; Memphis, Tennessee; Baltimore, Maryland; El Paso, Texas; New York, New York; Kansas City, Missouri; Chicago, Illinois; Boston, Massachusetts; St. Louis, Missouri; New Orleans, Louisiana; and Los Louis, Missouri; New Orleans, Louisiana; and Los Angeles, California. The grants called for the two-and four-year colleges, during a 15-month period, to bring faculty and academic administrators together to work on specific projects likely to improve trans-fer activity between the two institutions. Each project involved commitment to either curriculum development, faculty and administrative collaboration on institutional processes needed to better manage transfer, or direct work with students to improve transfer skills. This report describes the partnership activities undertaken by the 13 pairs of schools involved in the project, and includes the names and addresses of the project directors. (JMC)

Year Colleges In March 1990, the Center for the Study of Community Colleges in Los Angeles hosted a Transfer Assembly as part of an on-going effort to stabilize the imprecise definitions and data relating to student transfers from community colleges to four-year institutions. This report provides excerpts from six of the presentations given to the assembly. First, Mike Nettles discusses the collection methods, con-tent, and scope of the various types of available data on transfer, and reviews evaluative purposes those data might serve. Next, Burton R. Clark emphasizes data might serve. Next, Burton R. Clark emphasizes the "public accountability" factor served by data collection, suggesting that the collection of data on transfer prompts honest self-reporting and promotes both the institutional integrity of, and public respect for, the community college. Next, Jim Palmer underscores the importance of developing an operational definition for the calculation of transfer rates. Then, Louis Bender discusses the increasing influence of state legislatures through the passage of resence of state legislatures through the passage of res-olutions and provisions relating to transfer and articulation, and the growing national concern for transfer/articulation problems. Next, Charles Mc-Intyre addresses the issue of data standardization, longitudinal data collection, and guidelines for the use of accountability data. Finally, Judith Eaton uses a hypothetical conversation between a wealthy nefactor and an evasive, ill-informed community

college president to illustrate the inability of community college officials to provide meaningful, intel-ligent information about the institutional transfer experience. (GFW)

This report presents fall 1989 demographic, staff-ing, salary, and workload information on California community college employees, based on data col-lected from 70 of the 71 districts in the state. First, tables present the total number of district employees by primary occupational activity; the number of full-time equivalent (FTE) employees by occupa-tional activity; the number of employees by type of assignment; percent distribution and rate of weekly faculty contact hours, and a 7-year profile of full-time faculty and average salary paid. Next, tables are presented for each of six major categories of community college employees: (1) contract and reg-ular (full-time) faculty; (2) temporary (part-time) faculty; (3) full-time professionals, including faculty who spend more than 15 hours as counselors, librarians, or nurses; (4) full-time certificated administra-tors; (5) full-time classified administrators; and (6) all other full-time classified employees. For each group, tables provide data on percentage distributions by age, gender, ethnicity, employment classification, employment status, duration of employment contract/agreement, annual salary per schedule plus stipends, salary contributions and district-paid employee benefits, and overload salaries. Appendixes provide the survey instrument, staff data district contact persons, and district salary schedules.

Identifiers-*Western Association of Schools and Colleges

This four-part handbook, developed by the Accrediting Commission for Community and Junior Colleges of the Western Association of Schools and Colleges (WASC), is intended for use by two-year institutions under review, members of evaluation teams, and others concerned with good practice in two-year institutions. Part I reviews the purposes of accreditation, standards and policies, the college-Commission relationship, accredited status, periodic review, candidate status, review and appenion review, cannot status, review and appeal, alteration of the evaluation schedule, and eligibility criteria for accreditation. Part II describes eight standards for accreditation institutional integeight standards for accreditation institutional integ-rity, educational programs, student services, faculty and staff, library and learning resources, physical resources, financial resources, and governance and administration. Following each standard is a list of supporting documents which might be useful to the institution and the outside evaluation team. Part III describes three types of accreditation policies: (1) testimonial policies developed by the Commission, which define good institutional practices in more detail than the accreditation standards; (2) national policies, which advise postsecondary institutions and accrediting agencies about good practice; and

(3) operational policies, which affect the organiza-tion and conduct of business of the Commission. Part IV is an appendix which includes a description of accreditation agencies and related organizations, the WASC constitution and appeals procedures, and a glossary of definitions and acronyms. In 1990, a follow-up study was conducted of for-mer students of Lane Community College (LCC) and their employers. The survey targeted three groups of former LCC students: all 1988-89 graduates who earned degrees or certificates all no-for-mal-award leavers with 70 or more credits, and all early leavers who had earned less than 70 credits while attending LCC. The data were classified by whether the respondent was a declared vocational major or a lower division transfer student. For the student survey, 289 usable questionnaires were returned for a response rate of 68.2%. The employer section of the survey was sent to all supervisors of section of the survey was sent to an supervisors of those student respondents who agreed to have their employers surveyed, and 91 completed surveys were returned. Major findings of the surveys in-cluded the following: (1) a majority of the no-for-mal-award leavers and lower division transfer students were attending a four-year institution full or part time; (2) over 75% of the graduates and 60% or part time; (2) over 75% of the graduates and 60% of the no-formal-award leavers and early leavers were employed full or part time; (3) graduates were more likely than no-formal-award leavers and early leavers to be employed in fields related to their LCC training; (4) 78.5% of the graduates agreed "very much" with the statement that they had accomplished their goals at LCC; (5) average employer ratings of employees' personal skills were very high; and (6) employers rated specific vocational skills and general technical skills lower than personal skills. Detailed data tables and granhs, and the two skills. Detailed data tables and graphs, and the two survey instruments are included. (JMC)

grams, "Stopouts, Student Characteristics, Two Year Colleges Identifiers—City Colleges of Chicago IL In 1988, a retrospective study was conducted at the City Colleges of Chicago (CCC) of the enroll-ment patterns of 1,521 students who graduated from the district in spring 1987. The study was designed to determine the length of time it took a sample of CCC graduates to receive a two-year degree. Data for the study were drawn from computerized and hard-copy student records, including the number of hours enrolled and earned each semester (including summers), the CCC college attended (or an indication of the nature of the non-CCC college attended), and the number of hours earned at each college. Major findings of the study included the following: (1) the average time between first enrollment at CCC and the receipt of a degree was 5.9 years; (2)

only 61 students received their degree in 2 years or only 61 students received their degree in 2 years or less, with most taking from 2 to 8 years and 50 taking 20 years or more; (3) three out of five graduates took time off while pursuing their degrees; (4) on average, graduates enrolled for 9.2 semesters, with only 35 graduates completing their degrees in four semesters; (5) 72% of the graduates combined part-time and full-time enrollment, with only 20% continually enrolled full time; and (6) based on limited comparative data, CCC enrollment patterns appeared to be similar to those of associate degree recipients at many other institutions and reflected recipients at many other institutions and reflected the general trend toward longer enrollment periods in American public higher education. Data on the characteristics of degree recipients, enrollment and stopout patterns by college, and remedial course-taking trends are appended. (JMC)

Descriptors—Academic Standards, *Articulation

(Education), College Planning, *College Transfer Students, *Community Colleges, Curriculum Development, Higher Education, *Intercollegiste Cooperation, Models, Organizational Effectiveness, Teacher Student Relationship, *Transfer Policy, *Transfer Programs, Two Year Colleges To date, community colleges have used two major approaches to manage transfer and assist students with a successful transfer experience: a "student service" approach, concentrating on counseling, advising, catalog information exchange, and other student affairs functions; and a "document" model, relying on articulation agreements, course equivalency guides, and systemwide regulations. A new approach to transfer education, the "academic" model, augments the work accomplished through these models. The academic model assumes that the strengthening of academic practices in relation to transfer education will result in enhanced transfer success-especially when undertaken as a shared ensuccess-especially when undertaken as a snated terprise between two- and four-year institutions. This model focuses on campus-based academic practices related to the curriculum, classroom teaching, and expectations of student performance, relying primarily on the work of two-year college faculty in the classroom, the relationship between two- and four-year college faculty, and student-fac-ulty relationships at both institutions. The critical element is the emphasis on the shared development of curricula and pedagogy at two- and four-year institutions. Use of the model should not be part of a volunteer faculty activity, but part of a careful institutional plan. The model must also involve institutional data collection and analysis of transfer student behavior. A description of the use of the academic model by a hypothetical community college is included. In 1989, a survey was conducted of community college presidents in Kansas to assemble information on community college practices concerning board of trustee meetings and communication. Sev-enteen of the 19 college presidents surveyed returned usable questionnaires. Study findings included the following: (1) only four of the responding presidents favored going to a seven-member board, with eight opposing the move and five indi-

cating no preference; (2) 16 of the respondents indicated that they had one board meeting scheduled each month; (3) all respondents indicated that the board meeting was held on a set day of the week and week of the month; (4) most of the respondents indicated that special board meetings had been held, with seven colleges holding two special meetings and three colleges holding more than five special meetings; (5) nine of the special meetings focused as holder. Union and seven seed helds this house of the special meetings. on budget/levies and seven each dealt with personnel and property; (6) 10 colleges sent a newsletter to their board members at least once a month; (7) board meetings consistently lasted less than four hours, with most held during the evening. The survey report includes raw responses and open-ended comments to each survey question, as well as copies of sample board meeting agendas from 13 colleges. A copy of the questionnaire is also included. (JMC)

In an effort to develop a set of institutional values which could be commonly shared and promoted at the college, the president of Allen County Community College (ACCC) surveyed all employees and trustees asking them what they perceived to be the institution's central values concerning institutional identity, students, and faculty and staff relation-ships. Survey findings revealed the following set of central institutional values: (1) values pertaining to institutional identity included maintenance of quality instruction at college-level standards, promotion of self-evaluation and innovation, and the freedom of exchange of ideas; (2) values concerning students included the growth of students toward their full academic potential, the belief that students possess abilities which can be further developed, student access to classes appropriate to their ability levels, and the opportunity for students to develop life skills through the educational experience; and (3) values pertaining to faculty and staff relationships included the responsibility of all college personnel to promote and support the college's educational mission, the professional accountability of faculty and staff for their actions, the need for effective communication and cooperation among faculty and staff, and the provision by the college of professional development activities for faculty and staff. A list of behaviors for faculty, administrators and students consistent with these values was also developed.

In 1985-1987, seven faculty members at Sacramento City College (SCC), California, conducted
classroom-based research studies as part of an effort
by the college to involve faculty directly in research

by the college to involve faculty directly in research as a means to improve teaching and learning. In 1987-88, three follow-up studies were conducted to validate and/or expand upon the original research. This monograph contains the three reports under-Inis monographo contains the three reports undertaken as follow-up studies. The first study, "Integrating Content Area, Study, and Writing Skills Instruction: Follow-up Study," by Robert T. Carroll, was unable to find any significant effect on learning outcomes (as measured by exam scores and retention rates) attributable to the introduction of contents and action to the content of the content retention rates) attributable to the introduction of study and writing skills instruction into a philosophy class. The second report, "Logarithms and the Hand Held Calculator," by Ronald Hatton, indicates that no "ignificant difference was found between students using hand-held calculators and students working free-hand, in their ability to perform exponential and logarithmic functions in one out of three cases. The final study, "Combined Reading and Writing Instruction," by Delbert L. Prescott, examined skills improvement among a group of students reading below the seventh grade group of students reading below the seventh grade level to determine whether: (1) writing instruction improved reading skills; (2) reading instruction im-proved reading skills; and (3) combining reading and writing improved retention rates and promoted advancement. Improvement was found in all areas except reading comprehension. Evaluation instru-ments and the original program budget proposal are included. (JMC)

Colleges
As global exchanges lead to less segregated and nationalistic modes of interaction, the importance and utility of international education becomes ap-parent. International education means more than foreign students on campus and courses that come under the rubric of international studies. It also includes creating an international dimension in traditional disciplines, especially the sciences; addressing the curricular needs of international students beyond their need for English-as-a-Second-Language training; undertaking faculty es-changes; and developing off-campus programs to promote the assimilation of immigrants into the community. Such efforts can, of course, be very expensive to run, and some educators are threatened by the possibility of reallocating resources from the traditional disciplines to the relatively new enterprise of international education. The challenge for administrators is to ascertain whether the opportuadministrators is to ascertain whether the opportunities afforded by international education justify this reallocation of resources. These opportunities include the following: (1) international students can contribute to the knowledge and understanding of members of the host community, and they can also contributing to the knowledge and understanding about the host country when they return home; (2) the fees paid by international students can have a significant financial impact on institutions: (3) brid-significant financial impact on institutions: (3) bridsignificant financial impact on institutions; (3) bridsignificant mancial impact on institutions; (3) orio-ges can be built between the different cultures of the international students themselves; (4) support mechanisms can and should be created to prevent the isolation of foreign students in national ghettos; and (5) by arranging home-stays and coopera-tive-education opportunities for international stu-dents, colleges can lead the community in developing tolerance for people of other races and cultures. Colleges In 1990, a study was conducted of 1,912 students receiving associate in arts or associate in science degrees the Los Angeles Community College District (LACCD) in spring 1989 to determine the length of time taken to graduate. Data for the study were gathered from spring 1989 graduates' district transcript records which contained enrollment dates and demographic information including gender, age, and ethnicity. Major findings of the study included the following: (1) the average time from first enrollment in LACCD to graduation was 4.25 trist enrollment in LACCD to graduation was 4.25 years, with students taking anywhere from one semester to more than 16 years to receive their degrees; (2) females took slightly longer to graduate than males; (3) students entering before age 20 and those entering after age 35 finished most rapidly (4

and 3.5 years respectively); (4) differences in graduation rates were found among ethnic groups, with Asian students graduating fastest in an average of 3.5 years; (5) fewer than half of the graduates were stopouts en route to earning a degree; (6) older students earned fewer units than younger students, while Whites and Blacks earned fewer total units than Hispanics and Asians; and (7) 25% of the students who entered between the ages of 25 and 34 stopped out eight or worse times. Detailed earned dents who entered between the ages of 25 and 34 stopped out eight or more times. Detailed graphs broken down by gender, age, and ethnicity provide specific data on years to graduation; semesters at-tended; number of stopouts to graduation; semester course load; total units earned; and total prerequisites and developmental units earned by graduates.

Trustees appointed a committee of 100 citizens from Saginaw, Bay, and Midland counties to study current college operations and develop recommendations for future directions for DC in the areas of programs, facilities, and finance. Three subcommittees were formed to examine each of these areas. The Subcommittee on Programs examined issues related to college transfer programs, one- and two-year occupational programs, and short-term occupational and contract training programs. The Facilities Subcommittee addressed the issues of space utilization and flexibility, parking, dormitories, the library, and the physical condition of the buildings. The Finance Subcommittee investigated current financial conditions and made projections about future stability. The recommendations of the three subcommittees included the following: (1) improve counseling and communication of regulations regarding student transfer to improve transfer rates;
(2) improve college contacts with the business community; (3) provide training to respond to the needs of smaller and mid-size employers; (4) require a demonstration of "core skills," including reading, math and science, of all graduates of occupational programs; (5) produce written procedures for main-tenance personnel in specific functional areas; and (6) develop alternate sources of revenue to meet a projected increase in expenditures. Appendixes out-line a scholar's program for identifying leadership potential in students, and present financial data. (GFW)

Since 1984, the California community colleges have charged an enrollment fee of \$5 per credit unit for all students. A 1987 study revealed that the fee contributed to an enrollment decline during the first year, especially among low-income and part-time students, and that the Board Financial Assistance Program (BFAP) for low-income students did not significantly compensate for the fee's impact. In subsequent years, however, enrollment stabilized, ere was a return of low-income and minority students. The statutes authorizing the enrollment fee expire in January 1992. If the fees are not reauthorized, the colleges would lose about \$79 million annually, one or more programs would lose funding, and there would be no mechanisms for distributing BFAP funds to low-income students. To forestall these problems and promote the enrollment of underrepresented groups, the following policies have been proposed: (1) apply a cost of living adjustment to the fee that would raise it to \$6 per unit up to \$60 to the fee that would raise it to 36 per unit up to 360 per semester in an estimated 3 to 4 years, (2) continue the present BFAP program; (3) increase the health fee maximum from \$7.50 per semester to \$10 per semester and continue to exempt BFAP recipients from this fee; (4) remove the mandate that all colleges must maintain their 1987 level of health services; (5) clarify and standardize practices involving instructional materials charges. Appendixes summarize principles and policies on fees and financial sid, costs of attending a community college fault. cial aid, costs of attending a community college full time, distribution of community college students by income level, financial assistance awarded in 1984-85 and 1989-90, and statewide general fund revenues. Designed for use by college administrators and staff, as well as by boards of trustees and legislators, this seven-part report outlines an approach to asses-sing institutional effectiveness which utilizes mission-based, student-centered indicators of succes Resources to assist practitioners in conducting such an assessment are also identified. The first section provides an overview of the assessment approach presented in subsequent chapters, and includes a discussion of the importance of having an up-to-date mission statement in order to utilize the approach. The following five sections of the report focus in turn on the community college missions of:
(1) transfer; (2) career preparation; (3) basic skills nd developmental education; (4) contin

tion and community service; and (5) access. Each of these sections includes a review of the clients served, the programs generally employed to serve them, and a guide to assessing such programs. Also provided are a list of assessment questions and data sources which can be used to answer such questions. The final section of the report provides detailed answers to 11 specific questions and issues often raised by institutions attempting to undertake an effectiveness assessment. Appendix A provides a guide to selected resources for implementing an institutional assessment process and a list of suggested readings on specific methodologies. Appendix B comments on the issues an institution should consider in selecting or using standardized assessment instruments.

leges, Vocational Education

The renewed emphasis on the community college transfer function has both positive and negative aspects. On one hand, the creation of articulation agreements, transfer centers, consortia, and na-tional centers promises to reduce the barriers be-tween two- and four-year colleges, enhance the mobility of minority students, and improve teaching and learning. On the other hand, raising the academic emphasis of the community college above all other purposes might weaken the comprehensive nature of these institutions and still fail to improve transfer rates. The decline in transfer rates is due to a host of causes, many of which not effectively addressed by articulation agreements or transfer cen-ters. These factors include the rise of vocational programs relative to academic programs, nontradiprograms resurve to academic programs, nontradi-tional attendance patterns, declining achievement in high school, and declining federal financial aid. Efforts to enhance the transfer function should pro-mote the other purposes of the comprehensive com-munity college as well, including: (1) providing low-cost/low-risk options for "experimenters" and "undecided" students; (2) integrating academic and descriptions of the property of the property of the contract and contract the contract of the contract and contract and contract and vocational education; (3) making developmental ed-ucation more effective; and (4) minimizing the tracking of "low-ability" students into vocational programs and otherwise preserving educational eq-uity. Community colleges will improve transfer rates and the college as a whole by focusing on: initial student assessment and counseling, remediation centers linked to both academic and vocational programs, coherent sequences of courses, the gathering of comprehensive information on student progress and follow-up statistics, improved instruction, placement and transfer centers, increased student financial aid, and better preparation of high school students for college-level work. This five-part databook provides statistical infor-mation on Anne Arundel Community College (AACC) in Maryland, including data on student

headcount (including longitudinal trends), full-time equivalent (FTE) enrollments, country share, grad-uates (including results of a follow-up survey), and student outcomes assessments. Findings and trends highlighted in the report include the following: (1) there has been a shift in student enrollments in recent years from career programs to transfer programs; (2) in summer 1990, 98% of the credit student body attended part time; (3) total FTE en-rollment increased 14% from 1989 to 1990; (4) the Social Science Division generated the most credit FTE in 1990 and also experienced the greatest growth in FTE from 1989 to 1990; (5) in fall 1989, AACC attracted 49% of the college-bound high school graduates in the county; (6) 71% of the 660 school graduates in the county; (6) 71% of the 660 Associate of Arts degrees awarded in 1989 were transfer degrees; (7) 1990 graduates were 65% female and 10% minority; (8) in a follow-up survey, 96% of the graduates rated the overall quality of the college as good or very good; (9) from 1986 to 1990, the Allied Health Division recorded the highest pass and success rates for students at the college, while the Math and Science Division recorded the lowest rates; and (10) the average fall-to-spring re-tention rate for first-time freshmen was 53%, with students enrolled in transfer programs retained at the highest rate. The Information Age is a new cultural era in

The Information Age is a new cultural era in which the dominant resource is information. For educators attempting to prepare the increasingly di-verse student body for the 1990's and beyond, the scope, magnitude, and constantly changing nature of this Information Age renders the task monumen-tal. In an effort to create a real-world context for a humanities survey elective, Harford Community College in Maryland utilized daily newspaper clip-Coulege in Maryland utilized daily newspaper clippings, wire copy, and an on-line computer network service as the primary instructional resources in the college's Principles of Logic course. Students were taught within the perspective of the "human image system," defined as the cultural and social particulars through which are individual of the college of the coll lars through which each individual interprets his or lars through which each individual interprets his or her world. Awareness of one's own image system and the image systems of others is intended to broaden tolerance of cultural diversity. Following the course, a follow-up questionnaire was sent to 52 students to elicit reactions to the course content and to determine the value of the instructional materials used. Survey results, based on responses from 27 students, included the following: (1) over half of the respondents found newspapers to be a very valuable tool in increasing critical thinking skills; (2) only one-third felt that using newspapers in the class in-creased their reading of newspapers outside of class; (3) over 75% indicated that after the course they (4) there was unanimous support for the use of newspapers as an instructional tool. The course syllabus, survey instrument, a tabulation of survey re-sponses, and comments of respondents are sponses, and cappended. (JMC)

In 1989, a study was conducted to determine whether General Educational Development (GED) certificate holders and students with high school diplomas achieved the same degree of academic cuccess at Lorain County Community College (LCCC). The study subjects were LCCC students who were admitted just prior to the 1988-89 school year, including 40 students with high school diplo-mas and 40 GED certificate holders. The GED mas and 40 UED certificate noticers. In GED group was comprised of 18 (45%) males; 31 (77%) Caucasians; and 19 (42.5%) married students. The diploma group was comprised of 11 (27.5%) males; 37 (92.5%) Caucasians; and 5 (12.5%) married students. dents. Mean grade point average (GPA), credit hours attempted, credit hours completed, and placement test results were averaged for each of the two groups. The study found that the diploma students produced significantly higher GPA's and attempted and completed more credit hours than did the GED students. GED students had an average GPA of students. GED students had an average GPA of 1.95, attempted an average of 12.4 credit hours, and completed 10.8 credit hours, while diploma students had an average GPA of 2.66, attempted an average of 33.4 credit hours, and completed an average of 31.4 credit hours. In addition, the placement age of 31-4 clean notes. In admitting, the pacement mean scores of the diploma students were signifi-cantly higher than the GED students, with the aver-age GED student needing remedial work in English, reading, and mathematics, and the average diploma student needing remedial work only in mathemat-

While the percentage of women and minorities in leadership positions is growing, the numbers are still not representative of the population at large. The 49 community colleges in Illinois enroll 62% of the state's minority college students. Five of these colleges (10%) have minority presidents, all of whom are African American. There are no Hispanic community college presidents in Illinois, although in Chicago, 20% of the total population and 27% of the community college student population are Hispanic. There are only four Hispanic deans, none of whom are deans of instruction. This is due in part to the low number of qualified candidates. However, very few of those who qualify for top-level positions are ever offered such positions. Two colleges in Illi-nois serve as examples of institutions whose leaders were determined to fill top administrative positions with individuals who would best meet the future needs of their diverse student populations. The president of Harry S. Truman College, located in the multi-ethnic, multi-racial Uptown Chicago, hired an African American, a Native American, and a Hispanic to fill three of seven top administrative posi-tions. Women and minorities also hold a significant number of lower-level administrative positions at number of lower-level administrative positions at Truman College. Parkland Community College, which is located in a culturally and racially diverse, but predominantly white community, made a spe-cial effort to recruit women and minority candidates for the college presidency. The board hired a black woman as president based on her superior qualifica-tions. Overcoming the prejudices and biases that may serve as barriers to hiring qualified minorities requires dominant groups to understand that culrequires dominant groups to understand that cul-tural and gender differences indeed produce new and different leadership styles, but that these styles are valid and much needed. Currently, there are 16 program-funding sources supporting 125 projects in California community colleges designed to serve underrepresented students, disabled students, and gender equity concerns. These projects are administered through the following six units: (1) Educational Standards and Evaluation; (2) Transfer Education and Actionly. Evaluation; (2) Transfer Education and Articula-tion; (3) Vocational Education; (4) Student Services tion; (3) Vocational Education; (4) Student Services and Special Programs; (5) Economic Development; and (6) Faculty and Staff Diversity. In fiscal year (FY) 1989-90, 64 projects were being funded in the amount of \$2,517,980, while in FY 1990-91, 36 projects are being funded in the amount of \$1,256,910. In addition, two Middle High School programs and 18 Transfer Center Pilot Programs are being funded, and \$900,000 has been provided to district to economic the district to economic the district of comprunity. to districts to encourage the diversity of community college faculty. This report provides information on special project funding administered by the Chancellor's Office of the California Community Colleges to support programs and services for underrepresented students. The report provides brief descriptions of the projects funded by the Chancellor's Office in 1989-90 and 1990-91, listed by administrative unit and funding source, identifying each project by name, the underrepresented group(s) served, and the funding amount. Project directors and monitors are named, and a brief abstract is included. (AYC)

Based on admissions, academic performance and persistence outcomes data provided by West Ches-ter University, this report analyzes the performance and success rates of former Community College of Philadelphia (CCP) students who applied to or at-tended the university between 1986 and 1990. The first section contains information on application, admission, and matriculation patterns of 189 CCF students who applied to West Chester between fall 1986 and fall 1989. The next section contains data on West Chester academic and persistence levels for spring 1989 and fall 1989 transfers. The third section focuses on 34 new CCP transfer students who enrolled in the fall 1986 and fall 1987, comparing results with student outcomes from other feeder school categories. An appended supplement con-tains outcomes data for transfers who were enrolled in spring 1990. Study findings included the following: (1) CCP transfer student acceptance rates were 70% between 1986 and 1989; (2) 47.4% of the transfer students who matriculated between 1986 and 1989 earned grade point averages (GPA's) below 2.0 at West Chester; (3) among the transfer students enrolled at West Chester in the spring and fall 1989, the greatest proportion were enrolled in Liberal Studies; (4) fall 1986 and fall 1988 transfer student graduation rates were comparable to the graduation rates of transfers from other two-year institutions but lower than graduation rates from other feeder categories; and (3) the median GPA for the 87 CCP transfer students enrolled in spring 1990 was 2.53.

In 1986, an outcomes study was conducted of 1,731 former students of the Community College of Philadelphia (CCP) who had matriculated at Temple University between fall 1979 and fall 1985. Two years after this initial tracking study, Temple pro-vided updated information on CCP transfer student vioca updated information on CCP transfer student retention at the university as of fall 1988. Students were categorized by one of five areas of study at CCP: general studies; transfer-feated curricula; business curricula; allied health curricula; and com-munity service credit students. Temple retention outcomes were also compared for CCP graduates, non-graduates with 24 or more credits, and non-graduates with fewer than 24 credits. Study findings included the following: (1) the largest proportion of transfer students (43%) were enrolled in general studies curriculum at CCP, while allied general studies curriculum at CCP, while alined health students (2.4%) made up the lowest transfer percentage; (2) former CCP students' graduation rates from Temple had increased by 12.2% from 1986 to 36.2% in 1988; (3) students who had been in transfer-related curricula at CCP had the highest in transfer-related curricula at CCP had the highest graduation rates (43.1%) from Temple; (4) CCP graduates and CCP students who left CCP with 24+ credits had nearly identical Temple graduation rates (36.8% and 37.9% respectively); and (5) nearly three-quarters of the former CCP students experienced positive retention and/or graduation outcomes at Temple. Colleges Drawing from research and related literature on successful staff development activities, a profes-sional development model was developed and im-plemented at J. F. Ingram Technical College (JFITC) in Alabama. Designed to serve the professional development needs of support staff, apprentice and master teachers, and administrators, the model provides for vertical and horizontal occupational movement and for increasing knowledge and skills to levels commensurate with present job posi-tions and future aspirations. To develop the support staff component of the model, job and task analyses were conducted for each position, time on task esti-mates were developed, educational requirements were identified, a conference was held to develop a needs plan, educational/work experiences were reviewed, desired changes in job responsibilities were implemented, and a professional development plan was developed and agreed upon for each support staff member. The instructional staff component of the model involved the classification of the teaching staff as master or apprentice teachers, an annual conference review, an annual meeting with a TRIAD committee (comprised of a supervisor, professional development staff member, and university teacher educator), in-house learning activities, and the development of individual professional development plans. The administrative component also in-cluded input from the TRIAD committee, an annual cruacd input from the TRIAD committee, an annual conference and review, and professional development plans. During the model's implementation, morale was identified as the single most important influence on job satisfaction, and project staff utilized a variety of approaches to improve morale and provide a stress-free environment. A flowchart of the model is attached. (JMC)

Enrollment statistics and projections confirm the importance of focusing community college student recruitment and retention efforts on re-entry stu-dents. Re-entry students are a distinct and growing pulation whose educational requirements often differ from those of younger, traditional students. The literature on adult learners indicates that: (1) among the variety of reasons that adults return to school are that they have advanced as far as possible in their career field, they are demoralized by working long hours for low pay, or that their credentials are out-of-date; (2) curricula and instruction for adults should build on their prior learning and experiences; and (3) adult learners tend to be goal-oriented, interested in putting their knowledge to practical use, and affected by situational, disposi-tional, and institutional barriers to formal education. Marketing a community college education to this group should take advantage of existing knowledge about adult learners' goals, characteristics, and needs to select an appropriate communication method and message. While marketing efforts are being undertaken to sell the community college's "products," public relations efforts should focus on selling the college itself, with the lessons of commuselling the college itself, with the lessons of commincations theory applied to both efforts. Building upon the principles of marketing, public relations, and communication theory, and drawing from research findings on the effectiveness of various recruitment methods and programs for re-entry students, Sacramento City College (SCC) has development of the college (SCC) has develo oped two proposals to restructure and expand the college's re-entry program. One calls for the development of a comprehensive community relations plan based on other SCC recruitment models and re-entry programs to be incorporated into the col-lege's overall marketing plan. The other calls for the development of a video to inform the community about re-entry education and promote SCC. Time-lines, budgets, and an 83-item bibliography are included. (AYC)

Identifiers-Texas (Austin) This paper discusses CEDEN's Parent-Child Program (PCP) and its external evaluation. The pro-gram promotes healthy child development among at or below the poverty level in Austin, Texas. The goals of the PCP are to teach low-income parents in a culturally appropriate manner to encourage their children's development and provide stimulation, good nutrition, and health care for their children, and thereby prevent or reverse developmental delays. Objectives of the evaluation were to: (1) analyze short- and long-term program outcomes up to the first grade; (2) conduct a sociological study of the population served; and (3) study the process of program implementation. Information was gathered concerning sociodemographic characteristics of the family, the quality of the parent-child interaction, and the child's health, medical coverage, immunization status, developmental status, and nutritional status. Results of the evaluation showed that the PCP appears to have had a positive impact on chil-dren's hospitalization rates and mental development levels at the second birthday. However, there is as yet no evidence that either of these impacts continue past this time. (RJC)

This solicy brief examines the problems of parents

This policy brief examines the problems of parents who raise young children while working. Discussion contrasts family support systems in the United States with those of other western, industrialized nations, and indicates reasons for the intensification of U.S. family support problems over the last decade. Concluding discussion analyzes present federal legislative activities, state responses, and future policy concerns. It is argued that despite fundamental disagreements about the appropriate role of government in this policy area, a consensus is developing among policymakers and the public about the need to do something about the evident needs of families. Yet despite this, family support efforts are fragmented at best. Policy questions that need to be asked and answered are listed. (RH)

Participants were: (1) 46 students from a transitional first-grade, developmental, regular education school readiness.

developmental, regular education school readiness program (SRP) for at-risk kindergartners; (2) 20 nonplaced kindergartners who were recommended for SRP and who advanced directly into first grade; for SKP and who advanced directly into first grade; (3) 31 kindergartners; judged ready for promotion into first grade from kindergarten; (4) 16 students held out of kindergarten; (5) 24 students retained in kindergarten, first, or second grade; and (6) a random sample of 18 second graders. Along with standard standa dardized achievement outcomes and demographic background variables, the investigation probed the role of teacher-rated social, problematic, behavioral, motivation, success, self-esteem, classroom participation, and engagement characteristics of students Parent surveys examined the role of parental level of education, attitudes, and other contextual factors. Findings suggested that extra-year students were characterized by lower achievement ratings and teacher ratings than random or promoted students who were one year younger. Cautions about policy and a review of research on transitional first-grade program outcomes are appended. (RH)

A study examined learning strategies used by secondary school students in Singapore who were streamed into special, express, or normal high school curriculum courses according to their ability. The sample was drawn from nine schools, three schools for each stream. Participants were 1,165 eighth and tenth graders. Measures included Biggs' Learning Process Questionnaire items and addi-Learning Process Questionnaire items and a tional items concerning languages, social studies, mathematics, and sciences. Findings based on responses to English and mathematics questionnaires revealed significant differences in the choice of learning strategies of students in the normal track and those in the other two tracks. Students in the normal track indicated use of inappropriate learning strategies in both language and mathematics courses. Further examination seems to suggest that normal students lacked confidence and security. Strategies used by students in the special and ex-press tracks indicated that they understood the spe-cial features of the subjects and had the confidence needed to explore alternative routes in problem solving. It is concluded that if normal track pupils are to achieve satisfactory scores on academic ex-aminations, they may have to revise their learning strategies. However, they may not be able to do so out help from their teachers. English and mathematics learning strategy questionnaires are included in the text. (RH)

Canadian families differ from one another to the degree that it is now customary for researchers, helping professionals, teachers, and others to de clare their interest in families, not "the family." The proliferation of different family forms has led some, who disregard the fact that the traditional family has had a very brief history, to lament the decline of family and the erosion of true family values. While modern families are structurally diverse, they funcmodern famines are structurally diverse, they func-tion in the traditional way as the primary places where persons care for each other; produce, con-sume, and distribute goods and services; and try to satisfy family members' emotional needs. What is truly notable about today's family is the proportion of young women with children who have entered or young women with cameled who have entered the labor force or remained in the labor force while their children are young. Several considerations suggest that women are in the labor force to stay. Increasingly under pressure, the family is no longer a refuge, but has become a zone from which mem bers seek refuge in individual pursuits. To respond to the needs of families in the 21st century, Canadians will have to recognize and respect the diversity of family forms and be sensitive to the particular circumstances of families which they seek to help and support. Children comprise the largest group of poor Cana-diana. While childhood poverty is closely related to a number of factors pertaining to the structure and a number of factors pertaining to the structure and functioning of families, such as parental marital status and wage-earning patterns, the poverty of children is a consequence of the poverty of families. As such, childhood poverty can be reduced or eliminated only indirectly through policies oriented toward improving families' financial security. The incidence of poverty among Canada's children is itself a function of the more general erosion of the nation's commitment to its children. Contrary to current origins, the interests of goog children and current opinion, the interests of poor children and their parents will not be effectively advanced by reducing the modest amount of support provided to relatively advantaged children and their parents. Family allowances and tax provisions are not wel-fare measures for the middle-class. They are, rather, Tare measures for the middle-class. Iney are, father, the only measures through which Canadians have provided a minimal, yet tangible, acknowledgement of the costs incurred by parents in raising the next generation of citizens. There is much that can and should be done to supplement the capacities of families to care for their children. (RH)

Recent statistics on the Canadian family suggest
that, for many families. family life is now character-

that, for many families, family life is now character-ized by exhaustion, deprivation, older members, and the provision of support services by agencies rather than by unpaid women. Stress, in particular, is an effect of heavy burdens and a cause of new ones. But families cannot be adequately understood apart from the economic system in which they live. For example, as families juggle work and family respon sibilities, absenteeism in the workplace increases. Stress caused by preoccupation with family responsibilities can substantially reduce productivity on the job. Many Canadian employers believe that at least one quarter of the human resource problems they face are due to employees having to manage dual responsibilities at home and at work. Governments can demonstrate leadership in making work and family responsibilities more compatible by: (1) enacting legislation that creates a responsive work environment; (2) demonstrating flexible employ-ment practices; and (3) facilitating the development of new approaches conducive to the social change associated with a better balance between work and family responsibilities. Strategies that integrate workers with family responsibilities into corporate structures are emerging in a number of Canadian corporations and organizations. These strategies include flexible benefit programs, employee familiy benefits, and services and supports for employees' family members. (RH)

tive Technologies

Family life in Canada is alive and well, even though it may seem at times to be under attack. Families are changing in the functions they serve. One of the significant changes has been the increase in the number of women with paying jobs outside the home. This change has not necessarily caused families to be better off economically. Today, both spouses working full time at minimum wage can earn only 92 percent of the poverty line for a family of three. In a world where two paychecks are in-creasingly essential for family survival, single parents have a particularly tough time. Canadian families have shown resiliency in surviving severe threats, but any working parent knows that the linear requirements of work do not fit with the cyclical responsibilities of family life. There are important consequences to juggling these two separate worlds. In particular, dual-wage and single-parent wage-earning families seem to have a steady diet of overearnines seem to have a steady diet of over-load and need all possible support. Unfortunately, that support is rarely available at present. Employ-ers increasingly provide a range of leaves and flexi-ble working conditions, but they must also change corporate culture to encourage the use of these benefits by individuals with caregiving responsibilities. The ethical, legal, and human dilemmas brought about by the new reproductive technologies constitute yet another challenge to those that families must face as Canada moves into the 21st century.

Replication

Kentucky's PACE program, which was designed to provide adult basic education and parenting skills training for parents, early childhood education for children, and parent-child interaction and learning, lacks proof for the validity of its theoretical base and service model. Questions that need to be resolved before widespread replication of the PACE program occurs include the following: (1) Is there a caus relationship between family background and chil-dren's educational and social outcomes? (2) Will changes in family attitudes and behaviors change children's outcomes? (3) Can replication of the program in different settings by different providers reproduce original effects? Program review produced a statement of the theoretical model implied by the program's assumptions. The model consisted of hypotheses about family background, children's outcomes, and PACE services. Drawing from the literature on family background and child learning, an explanatory model includes hypotheses about the causes of undereducation. A prevention and remediation model includes hypotheses about the effect of PACE services on the amelioration of literacy problems related to family factors. The changes in family attitudes and behaviors literacy problems related to family factors. The present paper presents these hypotheses along with ideas about how they might be tested. Concluding material offers a strategy for evaluating the program. (RH)

County), *Program Characteristics A goal of the Maximizing Achievement Potential toward Excellence Program is that there be no sta-tistically significant differences related to race or socioeconomic status in the areas of academic achievement, placement, and academic participa-tion in kindergarten through 12th grade. The program is supported by a primary school objective which asserts that all students will have attained all achievement criteria for the third grade when they enter fourth grade; dedicated State Compens Education programs; the Chapter I instructional aide program for kindergarten; and the Chapter I Team Teaching In-Class Replacement program for first and second grade. This document describes the team teaching program for first and second grades in terms of: (1) team teaching, in-class location, and replacement for the purpose of reducing class size replacement to the purpose or reducing class size by half; (2) instruction in reading and language arts and mathematics; and (3) procedures for selecting and ranking students, keeping records, documenta-tion, monitoring individual achievement, and pro-gram improvement. Program evaluation findings indicate that students have made significant movement toward the goal of narrowing the gap between achievement and grade level expectations. A statement of county board policy, various statistics and graphs, and forms that aid in recording the progress of students in mathematics and language arts are provided. (RH)

This attempt to explain cooperative goal struc-tures as instances of social affordances begins with a description of Gibson's concept of affordance. "Affordances" are conceptualized as properties of the environment relative to an animal. The conthe environment relative to an animal. The con-cept's parallel theoretic development in Lewin's no-tion of psychological ecology and the advancement of this notion by Lewin's students are considered. Central to the discussion are the concept of a syno-morph, or behavior setting, and the idea that beha-tion and the strength of the concept of the synomorphus with behavior settings or inappropriate. It is suggested that behavior settings or inappropriate. It is suggested fordances, which more or less support appropriate and socially competent actions of children, and that

Gibson's idea of an affordance might be an excellent way of describing lesson types. It is suggested that each of Kounin and Gump's (1974) six lesson types may afford more or less task appropriate behaviors. Further dimensions of social affordances may be elaborated by descriptions of lessons in terms of Johnson's goal structures and signal system terminology. Also considered are Stodolsky's (1988) ideas on the importance of the complexity and novelty of the information in a signal. A figure categorizes cooperative learning methods according to the variables of incentive and task structures. (RH)

This article shows that bilingualism can be an en-

This article shows that bilingualism can be an en-riching part of children's lives. A young child named Anna, living in a bilingual environment in which English and Finnish were spoken, was observed and her speech recorded. This discussion focuses on aspects of Anna's acquisition of language. Initial dis-cussion works toward a definition of bilingualism and describes the social experiences of the b child and the effects of bilingualism on the child. Daily observation and recording of the child's speech revealed that the majority language, which, after a move from Finland to the United States, changed from Finnish to English, emerged quickly from a receptive stage and moved to a productive stage. While Anna was able to conduct role-play exclusively in English 4 weeks after entering nursery school in Mississippi, emotional attachment to certain Finnish words was evident. Extensive examples of Anna's code-switching, keeping the lan-guages separate, self-correcting behavior, literacy learning, learning to count, concept acquisition, and second language maintenance, are provided. Con-cluding remarks focus on the role of the teacher with bilingual students in the classroom. (RH)

Descriptors-Background, Federal Government, Descriptors—Background, "Federal Government, "Financial Support, "Government Role, "Pro-gram Development, "School Age Day Care, "State Action, State Government, State Legisla-tion, State of the Art Reviews, "State Programs In recent years, the interest in how children spend their out-of-school time has resulted in program de-

velopment projects at the local and state level and has influenced state and federal policymakers to propose legislation supportive of school-age child care programs. Gubernatorial and legislative efforts have succeeded in several states. Successful policy proposals involve enabling legislation that encour-ages public school space for before- and after-school programs in Massachusetts, Wisconsin, and Arizona, and full-scale funding programs for school-age child care in California, Indiana, and New York. Under the federal Dependent Care Grants Program Under the tederal Dependent Care Grants Frogram (DCGP), states can apply for funds to set up school-age child care programs. The DCGP has been reauthorized by Congress at 20 million dollars per year for fiscal years 1987-1990. While there are many possibilities for policy initiatives, particular attention should be directed to the needs of children of minority families in poverty. This publication's working list of state policy initiatives on school-age child care provides brief summaries of state initiatives followed by more extensive state-by-state de-scriptions. (RH)

Descriptors—*Academic Achievement, Identification, Interpersonal Competence, Kindergarten, *Kindergarten Children, Literature Reviews, Pringers Education, Problem

*Kindergarten Children, Literature Reviews, Piagetian Theory, Primary Education, Problem Solving, Sex Differences, Socioeconomic Status, Teacher Role, "Verbal Development Identifiers—"Private Speech, "Vygotsky (Lev S) The purpose of this study was to determine whether the private speech of 40 kindergarten children involved in a problem-solving task differed accreting to a study result of the private speech of 40 kindergarten children involved in a problem-solving task differed accreting to a study received a cording to gender, socioeconomic status, sociability, and academic ability. The introductory chapter proand academic sounty. The introductory chapter pro-vides a brief summary of the theoretical views of Piaget and Vygotsky concerning private speech. Chapter 2 reviews research on private speech and its relationship to such variables as intellectual maturelationship to such variables as intellectual maturity and sociability. Also discussed are the private speech of boys and girls and that of children from lower socioeconomic backgrounds. Chapters 3 through 5 deal with methodology, results, conclusions and recommendations. Private speech was categorized according to Manning and White's 4 levels and 13 sublevels. Findings support Vygotsky's theory in that children considered by teachers to be below-average in academic ability used more unhelpful private speech than did children considered to be above-average. There were no differences ered to be above-average. There were no differences at any of the four levels in the private speech of male and female subjects, of children considered aboveor below-average in sociability, or of children from middle- and lower-class families. It is concluded that teachers might identify students needing extra attention by listening to the private speech of their

young students. (RH)

This study of the influence of social context on
children's learning investigated the functions of lit-

children's learning investigated the functions of lit-eracy-based verbal exchanges of 37 preschoolers in a print-enriched play environment. Play settings in two preschool classrooms were enriched with print materials and literacy-related props. Four play set-tings were created: post office, library, office, and tings were created: post office, norary, ornce, and kitchen. Literacy props, such as stamps and recipe cards, were added to the play settings on the basis of appropriateness, authenticity, and utility. Chil-dren's play behavior was recorded by means of ex-tensive observations over a 2-month period. A total of 57 literacy-related conversational enciodes was of 67 literacy-related conversational episodes were isolated and analyzed. The three types of discourse about literacy identified were those used for: (1) designating the names of literacy-related objects, pictures, or texts; (2) negotiating meaning related to literacy topics or routines, such as mailing a letter; and (3) coaching another child in some literacy task, such as spelling words or forming letters, in order to achieve a goal in play. It is concluded that provision of literacy tools and authentic literacy contexts in play inducts children into the culture of literacy, where they may ultimately adopt the discourse paterns, ways of knowing, and cultural practices of the literate community. A total of 42 references are cited. (RH)

Descriptors—*Cognitive Development, Early

Childhood Education, *Educational Practices,

Childhood Education, *Educational Practices, Guidelines, Individual Development, *Kindergarten, *Preschool Education, Social Development, *Student Projects, *Teaching Methods
This paper analyzes the rationale for the project approach to educational programming from the cognitive-developmental perspective. It is argued that in many ways, the project approach reflects the cognitive-developmental view; that it is a convergence of Pianet's constructiving and Dewey's progressiv. of Piaget's constructivism and Dewey's progressiv-ism. Like any approach, the project approach is a way of teaching, learning, and thinking about children, learning, and knowledge. The project ap-proach views the child as active, individual, and whole. Children are unique in terms of experience, perceptions, understandings, and interests. This uniqueness should be the school's starting point in fostering continuous growth and development. To understand the physical environment and know the functions of things, children should have hands-on experience in interacting with and manipulating ob-jects. Learning that is focused on both the physical and gooile environment involves toxibutes while and social environment involves knowledge, skills, disposition, and feelings. It is concluded that what is required in preschool and kindergarten is an intel-lectually oriented approach in which children interact in small groups as they work together on a variety of projects which help them make sense of their experience. Improvement, *Thinking Skills Identifiers—*Analytic Ability

This document describes the implementation of a practicum intervention designed to improve the an-alytic abilities of academically above-average fifth and sixth graders in a class that emphasized aca-demic excellence. When students were tested on the development of complex thinking abilities, several areas needing improvement were identified. A tar-get group of 10 students who were weak in analytic skills was selected to facilitate program monitoring. The 10-week intervention consisted of: (1) daily 15-20 minute lessons with language arts or mathematics tasks geared to increase analytical skills; (2) daily homework activities; (3) weekly lessons in landaily homework activities; (3) weekly lessons in lan-guage arts, mathematics, and social studies that in-volved thinking and problem solving; and (4) a 3-week-long individual research project that stu-dents completed at home. Daily tasks were drawn from books that provided problems for students to solve by using mathematics or language skills. Students were evaluated on the criteria of concentra-tion, effectiveness, and analysis. Students found to be deficient in analytic skills at the beginning of the school year were not deficient when retested at the end of the school year. All students in the class, whether or not they were in the target group, showed substantial gains in analytical problem solv-

ment, Educational Practices, Grade 7, Grade 8,
*Interdisciplinary Approach, Intermediate
Grades, Junior High Schools, *Middle Schools,
Surveys, "Teacher Effectiveness, Teaching Methods, "Team Teaching, Team Training
This practicum intervention was designed to improve the effectiveness of a middle school's interdisciplinary teams. While the school's aixth grade
teams were judged to be effective in implementing
the district's philosophy, two seventh grade and two
eighth grade teams, composed of 18 teachers and
\$88 students, were among 70 interdisciplinary eighting grade teams, composed of 18 teachers and 588 students, were among 70 interdisciplinary teams in county schools judged to be ineffective on the basis of survey responses. Interdisciplinary cur-riculum planning was particularly problematic. A curriculum grid was developed before staff develop-ment scipling was implemented. The grid weeks ment activities were implemented. The grid packet contained a mapping of each grade level's curricu-lum, a skills checklist for each subject area, a list of objectives for possible curriculum integration, and seven activities that could be transformed into thematic topics for use in correlating curriculum during any 9-week period. The purpose of the packet was to allow interdisciplinary teams of teachers to see vital connections and commonalities in their curricula. The packet was used in staff development activities. Evaluation data suggested that the use of a supportive tool, such as the curriculum connection packet, is a viable way to move interdisciplinary team teachers into the curriculum integration phase of teaming. The appendices include a team interview questionnaire, a teaming competencies check-list, and the teacher survey on cross curriculum connections. (RH)

A practicum intervention designed to improve the basic skills of second and fourth graders by means of computer-assisted instruction was implemented.

of computer-assisted instruction was implemented.

The intervention focused on improving students' mathematics and writing scores on the Student State Assessment Test (SSAT), a test administered state-wide to third and fifth graders every year. Staff development activities, administrative and supervisory activities, and student and classroom activities were implemented concurrently. Staff development activities focused on increasing teachers' knowledge activities focused on increasing teachers' knowledge of computers and computer-assisted instruction. Administrative and supervisory activities concentrated on establishing the target group and developing a computer-assisted instructional program that would insure that students mastered required skills. Student and classroom activities involved at least two 30-minute sessions in the computer laboratory with a computer aide and use of the computer in the classroom. Results of the SSAT indicated that the program was not effective in remediating students' program was not effective in remediating students deficient skills. Mastery in the context of the computer laboratory did not always transfer to testing. Teachers did not demonstrate commitment to the program. Related materials, including survey instruments, and an annotated bibliography of 19 cita-tions are provided. (RH)

The relationship of middle school climate to academic achievement was examined. Participants

the reasonamp or mudie school cumate to academic achievement was examined. Participants were members of eight 6th grade classes. Four of the classes were in elementary settings, and four in middle school settings. Classes were matched as closely as possible on economic status and ethnic composition. tion. Entered into correlational analyses were the mathematics, reading, and overall scores on the Cal-ifornia Test of Basic Skills, and school climate pernorma lest of basic skins, and school climate per-ception scores in the areas of satisfaction, cohesiveness, friction, difficulty, and competition as measured by the School Climate Inventory Instru-ment. Findings revealed that elementary and mid-dle school students perceived school climate at essentially the same levels. Middle school students' perceptions of cohesiveness and mathematics, perceptions of reading and satisfaction, and total battery scores and cohesiveness were significantly and positively correlated. Since many correlation coefficients were tested and only three were significant, it was concluded that there were no linear relationships between students' perceptions of school climate and academic achievement. Differences on the scales of cohesiveness and satisfaction indicated that the middle school climate was more positive than that of elementary schools. Recommendations based on the findings are offered. (RH)

Data in this population bulletin indicate that in comparison with children of previous generations, today's youngsters are apt to have fewer siblings, and more likely to come from a broken home, have a working mother, and pass time as a latchkey kid.

More children are in child care than in the past, and there has been a significant move toward cen-ter-based care. Preschoolers, particularly those from relatively well-off families, are increasingly enrolled in prekindergarten. Declining family size and recent American prosperity have created material well-being for most of today's children. But the development of an underclass has also increased the number of children trapped in poverty. Stagnant wages of the working poor and the growing number of mother-only households have exacerbated income inequality among children. The decline in educa-tional achievement scores of the 1970s has ended, and average school performance has improved in the 1980s. An increased number of students, espe-cially blacks, completed high school in the 1980s. ciaily blacks, completed niga school in the 1980s. The physical health of the average American child has improved dramatically since 1960. But the pic-ture is marred by the problematic future of the chil-dren of the underclass and the uncertain psychological impact of America's transformed family life. (RH)

Identifiers-*New York

This report reviews the current conditions of New York's children. Topics include: (1) demographic conditions, trends and projections; (2) economic conditions; (3) child care; (4) education; (5) health condutors; (3) -find care; (4) education; (5) fleatin and nutrition; (6) school-age pregnancy and child bearing; (7) alcohol and drug abuse; and (8) racial and ethnic group inequality. The report reviews the implications and costs for the state of these conditions. Fundamental principles that should guide the development of programs designed to improve the situation are stated. A number of programs and acsituation are stated. A number of programs and ac-tivities that contribute to the improved welfare of New York's children are described. These programs are based on three principles: (1) responsibility for the welfare of children is shared by the family and the broader society; (2) prevention is of primary importance; and (3) a broad, community-wide approach involving all segments of society is required for the development of a new sensitivity to the wel-fare of children and families that recognizes the profound consequences of present unsatisfactory conditions. Operating principles shared by current programs include comprehensiveness and flexibility in provision of services, personalized attention on the part of program staff, ready accessibility of ser-vices, recognition of child and family in context, and responsible involvement of clients in the program.

An assistant principal for elementary instruction implemented a 10-week practicum intervention designed to use teacher in-service sessions to encourage the provision of daily opportunities for journal writing to kindergartners and first graders. In-service sessions offered: (1) an overview of highlights of related research; (2) approaches to the evaluation of student writing samples; (3) discussion of writing sample collection and evaluation; and (4) discussion of student progress in writing. Parents of participations of student progress in writing. Parents of participations. of student progress in writing. Parents of participating students were invited to attend an evening ori-entation session in the week of the second in-service session. Included in the orientation were suggestions about activities parents could use at home to reinforce and support whole language instruction. Practicum effectiveness was assessed through classroom observations, reviews of student journals, comparison of students' pre- and post-samples, and a parent survey. Data indicated that students were provided with daily journal writing oportunities and that teachers wrote responses twice weekly. Stu-dents showed significant gains in developmental writing levels. Parental reactions to students' journal writing and invented spellings were positive. Re-lated materials, such as surveys used and graphic analyses of pre- and post-intervention writing samples, are appended. (RH)

practicum intervention designed to reduce the number of suspensions and repeat offenses among 9th and 10th graders. A team approach was used to implement a discipline and counseling model that incorporated guidance services as a routine inter-vention strategy with repeat offenders. The intervention program was called Suspension Team Outreach Program-Guidance, Administration, Pupils (STOP-GAP). Each pupil suspended by the as-sistant principal met with the guidance counselor at least once to develop a plan for alternative behavior and complete a Self-Esteem Inventory. At the end of 10 weeks, teachers completed an academic and social rating scale for each participant. Program evaluation data indicated fewer suspensions and repeat offenses among participants during the intervention than before it. At least half of the target group demonstrated improved self-concept in class participation, social interaction, emotional control, adaptability, and attitude. However, attendance decreased and there was little change in academic per-formance. It was concluded that a team discipline approach can reduce suspensions and repeat offenses and promote improved self-concept. Related materials, such as guidelines for a counseling session for developing alternative behaviors, are appended.

A 10-week practicum intervention was designed to improve second graders' spelling skills. A target group of five students who had exhibited difficulty in staying on-task and were performing a half-year below grade level was selected. Practicum goals were that 60 percent of target children would: (1) score at least 80 percent on spelling tests in the 9th and 10th weeks; (2) recognize, at least 80 percent of the time, a misspelled word that had been taken from a spelling list and used in 10 sentences; and (3) demonstrate more positive attitudes toward spelling. The intervention consisted of the implementaing. In the intervention consisted of the impermenta-tion of a spelling program that focused on the interveaving of traditional methods of teaching spelling, modality-based instruction, the use of com-puters, and a whole language approach. Students used spelling words in journals, creative stories, sentences, and poems. Computer activities designed to aid visual memory of spelling words and heighten student motivation were made available. Comparison of pre- and posttest evaluation data indicated that students' achievement in spelling and attitudes toward spelling improved. All practicum goals were attained and exceeded. It is concluded that the suc-cess of the program shows that spelling must have a meaningful and motivational purpose in students' daily work. Related materials, including the spelling attitude survey, are appended. (RH)

A kindergarten teacher implemented a practicum intervention designed to improve teachers' commu-nication with parents of kindergarten children con-cerning curriculum and school activities. In particular, the intervention aimed to increase parental involvement in spite of the fact that parents were unable to spend time at the school. A computer and selected software programs were used to provide parents with information about topics and activities related to daily classroom objectives. Computer hardware included an Apple IIe and an Image-Writer printer. Software included Appleworks, Print Shop, Print Shop Companion, and Print Shop graphics data disks. Materials and information developed from teachers' weekly team planning ses-sions were sent home for 8 weeks. Information

consisted of a monthly curriculum overview, a calendar, and a list of activities that parents could easily implement at home with little time and few supplies. Evaluation data indicated that parents found the materials useful. Related materials, such as the parent needs survey instrument, the activity calendars, curriculum overview, and a list of parent and child activities, are appended. (RH)

This paper describes the second year of the Suc-cess for All program, which tries to assure that each student in an inner-city school succeeds in acquiring basic skills in the early grades. The program was first implemented in the 1987-88 school year in Abbottimplemented in the 1987-88 school year in Abbottson Elementary School in Baltimore. First year results revealed substantially higher student performance in language and reading, and substantially reduced student retention and placement in special classes in comparison with a matched school. This paper adds four major sets of findings to the earlier study. The discussion covers: (1) results of the second year of program implementation at the pilot school; (2) the evaluation of a replication of Success for All in its fully funded form in one of the poorest elementary schools in Baltimore; (3) the the poorest elementary schools in Baltimore; (3) the evaluation of a form of Success for All designed to be implemented under Chapter 1 schoolwide funds with relatively minor additional costs; and (4) the evaluation of the beginning reading component of the program. Sections of the document detail program elements, variations, evaluation design, and results. Findings imply that the insuring of kindergarten children's success at school may almost elim-inate the need for retention in grade and placement in special classes. (RH)

A literature review was conducted in an effort to

locate programs that could improve opportunities for learning for middle graders, and particularly educationally disadvantaged middle graders. Of more than 200 programs that were reviewed, about 80 were identified as having promising components for middle grades educators. Section I discusses issues underlying the identification of such programs and common components of promising programs. Topics include high content, definition of disadvanropics include high content, certainton of disadvan-taged students, prevention and treatment, and com-mon components of recognition programs, including Chapter 1 and National Diffusion Net-work programs. Section II provides examples of promising programs and their components in the areas of mathematics, reading, writing and language arts, thinking skills, science, social studies, and combined components. Also discussed are issues raised by conflicting components. Section III considers re-curring themes and conclusions. The report is expected to be especially useful to educators who are involved in program and staff development and evaluation or are making decisions about goals for students, gathering information on promising programs, or reviewing materials, costs, and evidence about effects. A total of 49 references are cited, and a directory of 77 programs is appended. (RH)

This study reports the results of a best-evidence synthesis of research on the use of one-to-one tutoring delivered by adults to students in the primary

ing delivered by adults to students in the primary grades who are learning to read. The synthesis includes research on five programs: Reading Recovery, Success for All, Prevention of Learning Disabilities, the Wallach Tutorial Program, and Programmed Tutorial Reading. All five programs showed substantial positive effects on student reading achievement. Two studies found cumulative effects of one-to-one tutoring, and one found lasting but diminishing effects. The five programs showed substantially more positive effects on student reading achievement than did other programs with similar costs. Positive effects included reduction of class size and provision of aides to classes. In Table 1, characteristics of the programs are summarized in terms of the location of the evaluation, tutor qualifications, tutee characteristics, duration of interven-tion, and tutoring methods and curriculum. Thirty-five references are cited. (Author/RH)

Data from a national survey of principals in public schools with a 7th grade were used in this study of schools that serve disadvantaged, advantaged, and other populations. Differences in the schools' course-taking opportunities, organizational structures, extracurricular programs, remedial activities, instructional approaches, staffing needs, and use of responsive practices were studied. Effects of middle grades practices on course-taking opportunities grades practices on course-taking opportunities were also examined in an effort to gain insight into the ways in which learning opportunities can be expanded through school restructuring. Findings in-dicate that schools that serve disadvantaged young adolescents are as likely as other schools to offer students substantial instruction in basic academic subjects, but are less likely to offer extensive reme dial programs, advanced courses, or instructional chai programs, acvanced courses, or instructional methods that promote active or higher-order learn-ing. Schools for the disadvantaged are less likely than other schools to offer a rich array of explor-atory courses, "minicourses," or extracurricular activities for students, but are equally likely to use responsive practices in the middle grades. Schools with a high proportion of minority students are less likely to offer instruction for active learning, higher-order thinking, or enriched electives. (Author/RH)

dent Characteristics, Urban Areas
This study uses data from a national survey of
principals of public schools with a 7th grade to document and analyze the variation in the types of marks and evaluations included on report cards issued to young adolescents in the United States. The analyses examine the prevalence of report card entries of various types and the antecedents and consequences of using specific types of entries. Principals report that performance grades are widecipals report that performance grades are wide-spread, handwritten comments and conduct grades are common, and progress and effort grades are rare. Although grade span, region, size of grade en-rollment, and urbanicity have some important con-nections to report card practices, there is considerable variation in practices among schools with similar grade spans, locations, or grade enroll-ments. Use of progress grades or handwritten com-ments on report cards is significantly associated with middle grades principals' reports of lower re-tention rates, lower projected dropout rates for males, and more successful middle grades programs. It is suggested that the actual benefits to students maies, and more successful middle grades programs. It is suggested that the actual benefits to students when they receive comments on each report card from each teacher are probably greater than the av-erage benefits reported here. (Author/RH)

A primary grades specialist implemented a 10-week practicum intervention designed to in-crease third graders' social skills by training their teachers in cooperative learning techniques and pro-viding cooperatively structured lessons. Eight skills were addressed; these included the skills of accepting peers' ideas for group activities, completing tasks on time, and following directions. Teachers participated in eight weekly in-service sessions. These sessions concerned the research basis for using cooperative learning, a description of the concept, teacher and student roles, ideas for implementation, a management system, and cooperative lessons for students. Videos were shown that introduced concernities learning and offered a view. introduced cooperative learning and offered a view of students engaged in cooperative learning sessions. A "quality circle" team was organized for the purpose of brainstorming for ideas and reviewing purpose of brainstorming for ideas and reviewing the teacher in-service program and materials. Stu-dents were provided with lessons that were struc-tured for cooperative learning in reading, spelling, and mathematics. It was expected that the interven-tion would improve students' social skills and task completion times and teachers' knowledge of techniques for teaching social skills. Practicum evalua-tion data indicated that the intervention was successful. Related materials, including a teacher training manual on cooperative learning, are ap-pended to the document. (RH)

This article: (1) profiles kindergarten policies and practices currently implemented in district schools; (2) analyzes the research supporting the major pol-

practices currently implemented in district schools; (2) analyzes the research supporting the major policy alternatives for six common kindergarten and school entry age issues that all school districts must address; and (3) identifies the optimum policy option alternative for each issue based on the analyses.
The six issues are entry age, placement criteria, retention practices, reading instruction, teaching strategies and instructional resources, and length of strategies and instructional resources, and length of kindergarten day. Three alternative policies are identified for each issue. Taken as a whole, the rec-ommended policy alternatives provide a model for early childhood education for schools and districts. The policies define a developmentally appropriate kindergarten curriculum which should optimize the early learning and future achievement level of all children. A total of 102 references are cited. The Innocence Rating Scale for school district kinder-garten policy options is provided. (RH)

This article presents an overview and analysis of

This article presents an overview and analysis of the newly approved Tennessee early childhood teacher licensure standards. An introductory section provides background information on educa-tional trends involved in efforts to revise state standards for licensing teachers. The general struc-ture of the license is presented and four distinguishing characteristics are discussed. They are: (1) increased emphasis on the development of children from conception through their eighth year; (2) strong emphasis on family and community involvement; (3) pervasive emphasis on teacher knowledge and skills related to observation and assessment of children; and (4) the integration of teacher communication, assessment, and parent relation skills. The major part of the document consists of the official c statements setting forth Tennessee's early childhood education teacher licensure standards and related guidelines, both of which are appended. Standards concern licensure and teacher competencies regarding general, professional, and early child-hood education in the areas of human growth, development, and learning; family and community involvement; the planning and facilitating of development; communication and language arts; reading; mathematics; social studies and history; science; foreign language; health and safety; physical educations and state of the state tion; and arts education. ent Coordinators

This guide describes program elements considered essential to any successful collaboration be-tween families and schools. Initial contents offer a brief discussion of the basic types of parent involve-ment and the benefits of and barriers to effective parent involvement programs. The guide then fo-cuses on ways to insure that necessary program ele-ments are implemented. Roles and responsibilities for each key player in the parent involvement effort are described. These include responsibilities pertaining to administrators, teachers, outreach workers, parents, community members, and children. Suggestions about the implementation of effective programs follow. These suggestions are based on a review of the research on parent involvement and on experience with a federally funded parent involvement demonstration project that was con-ducted in two elementary schools in the Northwest. The two schools were an inner-city, predominantly African-American school and a rural school with about 25 percent Hispanic student population. Selected references, and key organizations which offer publications, training materials, and informational kits for parents and teachers, are listed. (RH)

quencing Skills

A music teacher specialist at an elementary school with a typical kindergarten music program implemented a 10-week practicum intervention designed to improve the auditory sequencing skills of kindergarten children through increased instruction in music. Test scores on screening measures indicated the need to improve the children's auditory memory the need to improve the children's auditory memory and sequencing skills. A target class of 15 kinder-gartners was given instruction in music 5 days a week for 25 minutes a day. Materials in the music curriculum that required sequencing, memory retention, and auditory skills were used. A control group was taught the same skills as the target group, but only twice a week. Instruction involved singing, rhythm, listening, and movement and dance. It was expected that only the target group would significantly improve in auditory sequencing skills and positive attitudes toward listening. Pretest and post-test practicum evaluation data indicated that the intervention was successful. Targeted kindergartners significantly improved in auditory memory se-quencing skills, while children in the control group did not. Data from a teacher checklist that was used in a survey of the perceived importance of sequencing skills in the kindergarten classroom did not clearly support the primary finding. A total of 40 references are cited. Related materials are appended. (RH)

Identifiers—State Regulation
Alternative early childhood education policies that states might consider are discussed in this five-part report. Likely consequences, and pros and cons of each alternative are outlined. Section I presents various funding options, including the funding of existing programs, voucher mechanisms, project grants, and formula funding. Section II examines regulatory options, such as required conventional licensing, stricter licensing for public programs, ac-creditation for public programs, teacher certification and licensing, and mandated provision of space or funds by developers and child care benefits by corporations. Section III describes capacity-building mechanisms, including resource and referral agencies, technical assistance by state and local govagencies, technical assistance by state and local governmental agencies, improvement of teacher training through community colleges and four-year colleges, and teacher certification and licensing. Section IV discusses alternatives for program administration, including a new office of early childhood education or an interagency coordinating council in the state departments of education, child care programs funded by the emerging workforce programs, a state agency that licenses child care or administers Head Start, a state office for children, and a coordinating council that interartses policies and a coordinating council that integrates policies from several agencies. Section V offers a personal view of the ways states ought to structure their sys-tem of early childhood programs. (RH)

The Nature and Extent of Lead Poisoning in Children in the United States: A Report to

This national study on lead poisoning in children is organized in three parts. Part 1 provides an executive summary. Part 2 presents background information, an overview, findings, and conclusions. Part 3, which constitutes the bulk of the report, discusses the provided of the part terms, issues, and findings concerning lead metabo-lism, its relationship to lead exposure and adverse effects of lead, and adverse health effects of lead in relationship to public health risk and societal well-being. Also discussed are the number of children exposed to lead in the United States; numbers of children exposed to lead according to lead source; numbers of women of child bearing age and preg-nant women exposed to lead; low-level lead sources and children's aggregate exposure to lead; methods and alternatives for reducing environmental expo-sure to lead for young children and related risk groups; environmental releases of lead as evaluated under the Superfund Amendments and Reauthori-zation Act of 1986; and exposure to lead and toxic-ity in children and other related groups. Information gaps, research needs, and recommendations are dis-cussed. Appendices provide numerous tables of data, a draft report on lead-contaminated soil cleanup, the final and proposed national priorities list of waste sites with lead as a contaminant, and methodological details of blood-lead prevalence projections from the National Health and Nutrition nination Survey II data. A guidance counselor and chair of an elementary

A guidance counselor and chair of an elementary school's special services team implemented a 10-week practicum intervention designed to improve the school attendance of 107 kindergarten through fifth grade students who were chronically absent. While 49 percent of the truant students lived in an inner-city housing project, 62 percent lived in single family settings. The objectives of the intervention were to: (1) increase attendance; (2) increase attendance; (2) increase attendance; crease parents' contact with school personnel; and (3) improve truants' attitudes toward self and school. Each targeted student met twice with the counselor to chart attendance and attended eight group meetings that explored such topics as deci-sion making, self-esteem, motivation, values, effec-tive communication, stress management, sion making, seif-esteem, mouvation, values, effec-tive communication, stress management, assertiveness training, and absenteeism versus at-tendance. Individual contingency contracts were developed. Students' parents were contacted through informal notes, telephone calls, and through informal notes, telephone calls, and two-parent meetings. Attempts were made to im-prove parents' attitude toward school and increase their awareness of their ability to influence their child's success at school. Data indicate that the in-tervention was successful. Related materials are appended. (RH)

The degree to which intellectual development can be enhanced by systematic early educational inter-vention, and the relative power of early versus later intervention as a preventive measure against mild retardation and academic failure, were the central issues tested in the Carolina Abecedarian Project. The project was designed for infants and children from socioeconomically disadvantaged families. It provided interventions at the preschool and primary school levels. A day care center provided direct school levels. A day care center provided direct instruction to infants and children and educational materials to parents. Parents used the materials at home with their children to supplement the primary school curriculum. Participants were 109 families of children who were free of conditions known to have genetic or infectious links to mental retardation and who came from homes with low levels of parental income and education or histories of social maladjustment. Duration and type of intervention were systematically varied. Each high-risk subject was matched with a same-sex child in his or her class. matched with a same-sex child in his or her class. Findings demonstrated that early educational intervention could significantly benefit children at high risk for academic failure. Results suggest that intervention should begin in infancy. Children who appear to benefit most are those of mothers with very low intelligence. A total of 33 accessors are incl. low intelligence. A total of 33 references are cited

Primary goals of this study were to determine: (1) whether a child-centered educational preschool program and/or a parent-centered early elementary educational intervention program for disadvantaged children had effects on the child rearing beliefs and values of parents; and (2) whether parents' child rearing beliefs and educational values were related to children's academic achievements in early ele mentary school. Subjects were 83 low-income par-ents whose children were judged to be at risk for academic problems associated with mild mental re-tardation. Children from the at-risk subjects' kindertaroation. Uniteren from the at-risk subjects kinder-garten classes were randomly chosen to provide a local population comparison group. The preschool intervention consisted of a systematic program that provided intellectual stimulation for infants and preschoolers in a day care setting. The school-age intervention consisted of supplementary learning activities that parents could implement with their children and that were delivered in biweekly home visits of a home-school resource teacher. Findings indicated that mothers of at-risk children in the pre-school intervention group scored lower than other mothers on traditional beliefs. Such parental beliefs were negatively correlated with children's achieve-ment in reading. Parents of at-risk children differed from control group parents in beliefs and values. Maternal IQ and authoritarian beliefs may both be implicated in differences in parenting style which impact children's language development and even-tual literacy. References number 34. (RH)

Identifiers-Research Results

Identifiers—Research Results
Findings from a new nationally representative
survey of 25,000 American eighth graders, their
parents, teachers, and principals are reported. The
study was produced by the Education Department's
Office of Educational Research and Improvement and is called the National Education Longitudinal Study of 1988, or NELS:88. NELS:88 will follow the children every 2 years as they move into high school, college, or the labor market. The study's first survey year findings, which concern parents and children, parents and schools, and parent participation, reveal startling communication gaps among American adolescents, their parents, and their schools. Not only do students communicate infre-quently with their parents about school, they also quenty with their parents about school, they also rarely get advice from counselors or teachers. It is concluded that attainment of national, state, and community educational goals is impossible without a significant increase in parental involvement in education. (RH)

The aim of this study was to assess the extent to which collaboration with a more competent peer aids children's ability to solve mathematical balance beam problems under feedback and no-feedback conditions. Subjects were 61 children whose pretest conditions. Subjects were 61 children whose pretest scores on 14 balance beam problems that allowed reliable assessment at five increasingly sophisticated levels of thinking were at rule level two or three. Target children were randomly assigned to one of three treatment groups. Children were paired with another child whose thinking was at the same or a higher level or were not paired at all. Pair members took turns predicting the movements of the beam which would result from the placing of weights at various distances from the fulcrum. If pair members disagreed in their predictions, they were left alone to discuss the problem and arrive at one answer. Half the children received immediate feedback on their joint solution; half received no feedback. It was hypothesized that: (1) children who worked with a partner would improve more than those who had no partner; (2) children who received feedback would improve more than those who did not; and (3) chilimprove more than those who did not; and (3) emi-dren whose partner was more competent and who received feedback would improve the most. The second hypothesis was supported by findings of posttests administered a week and a month after the treatment. Only in the absence of feedback did children suffer from the lack of a partner. (RH)

fessional Role

resional Role
The unmet health needs of children, both globally
and in the United States, have recently been extensively publicized in the media. Such publicity leads
to the question: What can be done about these disturbing conditions? An answer can be seen in the ways in which vast proportions of the world's population, constrained by meager means, few facilities, and a clearly inadequate infrastructure, used what resources they had to make dramatic progress for their children in the 1980s. They empowered people with basic health knowledge and technologies by using every available means: radio, television, the press, teachers and their schools, priests and imams at the village level, commercial channels, and mass participation in health services at the community level. Low-cost measures that have produced major advances in child health include immunization, conadvances in child neatth include immunization, con-trol of diarrhoeal diseases, breast-feeding of infants, and the practice of monitoring and keeping records of children's growth. The American Academy of Pediatrics can extend the benefits of members' knowledge and skills to unserved children by adhering to the principles guiding primary health care, drawing lessons from industrialized and developing countries, and exercising leadership in child health issues. A list of goals for child and maternal health,

education, and development is appended. (RH)

mont, Wisconsin

Since 1986, this annual cost study has provided a measure of what it costs the taxpayer each year to support families that began when the mother was a teenager. Three sets of public costs are estimated; these reflect: (1) how much the United States spends as a result of teenage childbearing in a given year; (2) the public cost over a projected 20-year period for a single family that began in 1989 by a teen birth; and (3) the cost of all teen families begun in 1989 over the following 20 years. The study has expanded to include estimates for five states and two cities that are representative of different regions around the country. The states-Vermont, Louisiana, Wisconsin, New Mexico, and Oregon-and the cities-Baltimore and St. Louis-reveal a broad range of costs for the locales they represent. Findings reveal a rise in teen birth rates and a greater than expected increase in the costs of teen pregnancy. expected increase in the costs of teen pregnancy. The latter finding, ironically, reflects an encouraging development: an expansion of Medicaid coverage for low-income, pregnant women and children under 6 years of age. Introductory background information is followed by sections concerning 1989 estimated costs of teenage childbearing in the United States and in the five states and two cities, the case for teen pregnancy prevention, study methodology, and data sources. Frameworks, Congress, Macroanalysis, Micro-

analysis
A detailed ecological model is used to develop a
framework for assessing the incidence of child abuse
among American Indians. Macro, exo, and micro
levels of analysis are extended by the inclusion of
mediating and potentiating factors that may either
contribute to or ameliorate maltreatment or abuse.
Abuse and its consequences are considered in terms
of the context in which abuse occurs, the dynamics
of the abuse, and the abusive situation and the of the abuser and the abusive situation, and the re-sults for the individuals and institutions involved. Initial discussion notes the difficulty of defining child abuse and outlines the interdisciplinary perspective employed. Subsequent discussion covers:

(1) long-term potentiating factors of the macrosystem, with emphasis on Congress and the Bureau of Indian Affairs, the education of American Indians, and foster care and adoptive placement in the social and foster care and adoptive placement in the social welfare system; (2) the legal macrostructure, in terms of governmental versus tribal jurisdiction and the Indian Child Welfare Act; (3) potentiating and compensatory, long-term protective factors of the exosystem; and (4) child abuse in the family microsystem. It is concluded that long-term protective factors, such as tribal and family strengths, have attenuated the impact of long-term ecological stress. Citations number 98. (RH)

tive Dimensions, Functional Properties, Turn

Focusing on conversational stories of personal ex-Pocusing on conversational stories of personal ex-perience (SPEs), this paper explores the narrative skills of preschool-aged black children in a low-in-come, urban community. Although linguistic and anthropological work attest to a flourishing tradi-tion of story telling among black adults, little is known about the ways in which children become skilled participants in that tradition. Developmental research has focused on white children and on literary or make-believe stories. The purposes of this study were to document what 4-year-old black children know about the content, structure, and function of SPEs, and to compare stories initiated by children with those initiated by others. A conversa-tional narrative was defined as an episode of talk in which the child produced at least two clauses addressed to an interlocutor and referring to a particular event. Stories were collected from 5 preschool-aged children. Findings indicated: (1) frequent and effective use of SPEs by children for comquent and effective use of streets of embater for com-numicating a variety of experiences and sustaining a social relationship; (2) a high degree of mastery of SPEs by 4 years of age, particularly with respect to the use of evaluative devices; and (3) greater elaboration and complexity of narratives initiated by children, compared to stories initiated by others. Descriptors—*Community Development, Economic Development, Higher Education, *Land Grant Universities, *Rural Development, *Rural Economics, *Rural Extension, Social Adjustment Home to 65 million people, rural America is no longer insulated from national and international events. Once dependent entirely upon agriculture and natural resource industries, today tural America relies upon manufacturing and service industries. relies upon manufacturing and service industries. Tolies upon manuracturing and service industries. Jobs and other income opportunities in rural America must respond to global business cycles and competition. The overall dismal profile of rural America is framed in long-term trends such as the loss of vital services (schools, hospitals, and housing), disruption in rural financial institutions, deteriorating transportation and communications infrastructure, and the loss of population and political influence. Community leaders, business people, farmers, local and state officials, and other concerned rural citizens are looking for answers to serious questions to revitalize rural America. A Land Grant research and extension agenda responded to the question of how to revitalize rural America. These plans focus on competitiveness and diversification, strategies for local economic development, building commu-nity leadership, and adjusting to economic stress. The agenda addresses the interdependence of the rural economy, rural communities, and rural fami-lies in their effort to deal with world market shifts and domestic changes. Four broad goals guide this agenda: (1) to improve economic competitiveness and diversification; (2) to support management and strategic planning for economic investment; (3) to create community capacity through leadership; and (4) to assist in family and community adjustments to stress and change in rural America. Identifiers-Cultural Preservation, *Tribally Controlled Education

In 1987-88, some 150 American Indian students, parents, tribal leaders, and educators participated in seven regional dialogues on the reforms needed in American Indian education. Participants gave a clear message that Indians want direct control over educational institutions serving their children, cur-riculum reform to make cultural retention an important factor in their education, and tribal community empowerment to strengthen the partnership be-tween communities and educational systems. Despite the public schools' poor record in educating Indian youth and in being insensitive to cultural and historical issues, participants wanted the American model of education reformed so as to be relevant to Indian concerns. They endorsed the College Board's six basic academic competencies as vital skills needed for success in higher education and employment, but they expressed the need for tribal communities to set their own educational agenda, based upon local needs and concerns. They agreed that schools should offer appropriate tribal language courses and bilingual and bicultural courses. They made recommendations for the integration of American Indian content and perspectives into the areas of English and language arts, mathematics, science, social studies, fine arts, physical education and health, and computer literacy. Participants affirmed a holistic approach to education, and called for concerted action with regard to (1) biased textbook accounts of American Indians and their hisbook accounts of Atherican Indians atudents; (2) community in-service training of educators; (4) development of holistic cultural curricula; (5) parent involvement; (6) community dialogues and involvement; and (7) college scholarships based on academic excellence. Identifiers—Plains Wars
This book examines the formation of U.S. government policy toward the American Indian tribes dur-ing the period 1820-1890. Chapter 1 describes the early 19th century debate between the Gradualists, who believed in the peaceful assimilation of the Indians into white society, and the Removalists, who advocated forced removal of the tribes to the West. Andrew Jackson coalesced the two positions, producing a policy of separation that would ideally give the Indians time to acculturate. By 1840 the tribes of the South had been removed to Indian Territory in present-day Oklahoma. Chapter 2 ex-amines how the developments of the 1840s-migra-tory fever and the overland trails, "manifest destiny" and territorial expansion-led to a policy of concentration whereby the tribes would be confined to particular lands in exchange for an annuity of food and goods from the federal government. Chapter 3 details the effects of the Civil War on federal-Indian relations. Chapters 4 and 5 describe the two phases of the Plains Wars as struggles to realize and enforce the policy of concentration. Chapter 6 discusses government efforts to develop policy on governing the American Indians in the aftermath of the Indian Wars. This book contains a bibliographic essay, four historical maps, and an index. (SV)

This paper examines existing research regarding the problem of school dropouts. It examines the historical context of the problem and discusses current definitions and methods for identifying dropout characteristics and computing dropout rates. Few incentives exist for accurate record-keeping on dropouts. School finances are often linked to attendance reports, a circumstance that creates a conflict of interest for schools and administrators. Also, the varied methods districts use to determine enrollment alter the reported dropout rates. At the state level, education agencies should consider establish-ing common dropout definitions, methods for collecting data, and student tracking systems. In Maine, officials have become increasingly active in attempts to lower the dropout rate, which is reautempts to lower the dropout rate, which is re-ported annually as a percentage of fall enrollment. The state's average rate has stabilized at about 4% during the past 5 years. National computations show Maine's 79% graduation rate as being rela-tively high compared to the 71% national average. Many researchers have attempted to identify national dropout characteristics, looking at such factional dropout characteristics, tooking at such rac-tors as academic achievement, socioeconomic background, family background, individual atti-tudes, and ethnicity. Responsibility for the problem has been placed alternatively on the schools, soci-ety, and students themselves. An analysis of dropout programs and literature reveals a combination of prevention strategies, including non-punitive approaches, alternative school schedules, and modifyproaches, alternative school schedules, and modifying or rescinding policies that tend to discourage at-risk students. The traditional dropout prevention method has been segregation and remediation. The document concludes by calling for consensus on a national dropout definition, systematic research, and better understanding of the problem. It includes a bibliography, with approximately 100 citations. a bibliography with approximately 100 citations.

Identifiers—Youth Participation
This guide is written for teenagers who may be considering becoming active in their communities. It explains ways teens can increase their power and

effectiveness in community life and some of the things they will encounter along the way. It begins by emphasizing the importance of community service, illustrating the ways that teens already may be involved. The guide helps teenagers identify reasons they might want to get further involved. It describes they might want to get further involved. It describes the use of community forums among local leaders and other concerned citizens, including youth, to determine community needs and the best approaches to help meet them. Citizen action to bring about social change involves four primary types of activities, organizing. Winowing your stuff." outlied activities: organizing, "knowing your stuff," public education, and lobbying officials. Advising policy-makers is another method of influencing policy. Public hearings, written commentary, advisory committees, and special meetings are all types of political-advisory activities. Electoral participation is the most basic form of U.S. citizen participation. Volunteer community service and organizing volunteer efforts are also examples of community com-mitment. The guide offers tips for developing skills for effective community action. Such skills include becoming an active learner and basing one's perfor-mance on a set of commonly shared principles and mance on a set or commonly shared principles and values. Good planning is key to any successful com-munity-action project. Other skills include running effective meetings, persuasive letter-writing, using the telephone effectively, making well planned pre-sentations before public officials, using existing agencies and networks, and publicizing projects. Experience Programs
This paper sketches several successful community economic development programs that have implica-tions for rural education. Case studies are used to discuss community characteristics that contribute to development success. In Virginia, a Community Certification Program offers statewide business recruitment services to communities that meet program standards. A \$500,000 economic development fund in northern Vermont makes loans to promising businesses which cannot get bank funding. In many areas, venture capital clubs and business incubators increase the range of resources available to entre-preneurs. Nash Technical College in Rocky Mount, North Carolina, created thousands of jobs by drawing a firm to that state with the offer of specialized training for its employees. Hocking Technical College in Ohio offers on-the-job training by operating its own businesses, including a sawmill, a hotel, and a retail business. In Canton, Illinois, a library developed a database on the city's resources that eventually served a local business incubator project. In Virginia, businesses donated goods and services to build an industrial park. Public-private partnerships allow businesses to contribute to education in other ways. The Rural Entrepreneurship through Action Learning program in several Southern states helps students start their own small businesses. The paper suggests that successful community development cases are usually innovative, offer real advantages to the firms involved, and often involve an individual leader who serves as a catalyst. These factors are very difficult to replicate but they suggest that good rural development efforts start with leadership, en-trepreneurship, and ingenuity. (TES)

cation, *Rural Schools, *School Construction, School Support, *School Taxes Identifiers—Virginia (Lunenburg County), *Voter

This article describes a campaign for the passage of a 1989 bond referendum for the construction of of a 1999 bond referendum for the construction of two elementary schools in rural Lunenburg County, Virginia. The article, written from the perspective of a neophyte school superintendent, offers a demo-graphic description of the county, describes various voter groups, and provides a chronology of events surrounding eventual passage of the referendum. Groups perceived as supporting the referendum in-cluded the black community, the middle class, parents, and the local school board. Groups originally assumed to oppose the bond issue included large landowners, who would be shouldering a disproportionate share of the tax increase, and retirees originally from other more urban areas who may have lacked allegiance to the local schools or the county itself. A school board-directed campaign of speeches, letters, and community-based organizing was used to support the bond issue referendum, which passed in every precinct. The paper con-cludes with recommendations for similar campaigns that emphasize the importance of grass-roots orga-nizing, establishing the "moral high ground," focusing on the district's true needs, and starting the voter-education process early. In the Lower Kuskokwim School District of western Alaska, the Yupik Eskimo language is the language of preference in most homes and communities, and students are relatively isolated from an environment that requires the consistent use of fluent English. The district's bilingual education staff attempted to locate a commercially developed instrument that could be used to measure the various levels of oral and listening proficiency of their limited English proficient students. The staff agreed that an effective English language profi-ciency test would: (1) measure a wide range of basic interpersonal communication skills and beginning to intermediate cognitive academic language proficiency skills; (2) assess oral and listening comprehension; (3) provide levels of proficiency, K-12; (4) be diagnostic and prescriptive; (5) be easy to administer, acore, and interpret; (6) provide approximate placement to grade level; (7) have a high degree of interrater reliability; and (8) meet testing standards of validity, reliability and appropriate norming. These were the criteria used to evaluate the strengths and weaknesses of the following tests: (1) Language Assessment Scales I and II; (2) Basic Inventory of Natural Language; (3) Idea Oral Language Proficiency Test I and II; (4) Comprehensive English Language Test Secondary; (5) Second Language English Proficiency Test Secondary; and (6) the Maculaitis, K-12. None of the tests was satisfactory. This paper contains recommendations for the ciency skills; (2) assess oral and listening compre tory. This paper contains recommendations for the limited use of these instruments and suggested fea-tures that a more appropriate test would incorpo-

Area School District PA

This four-part paper examines formal and informal organizational structures at Selinsgrove Area Middle School, which serves about 1,000 students in grades 5-8. Part I presents a brief history of the founding of the school and the court battles preceding its construction, and the reasons why the initial steering committee chose a middle school organization operating on the team teaching and open space concept. Part II details the formal organizational structure of the school, including formal codes and procedures for staff and students; the structure of authority; formal means of staff and student evalua-tion; and influences on the organization from the state, teacher unions, parent groups, and professional associations. Part III discusses social organization and relationships in the school, including the influence of teaching teams on teacher and student networks; informal staff values related to cooperation and conflict; informal codes of behavior related to teacher conformity and student discipline; cliques and patterns of association among teachers, support staff, and students; sexist attitudes of male staff; relationships of the power structure to the formal authority structure and to cliques and networks; and informal means of teacher evaluation, reward, and "punishment." Part IV suggests a plan for organizational evaluation and change based on several theoretical models of change and change strategies.

This collection of articles provides an overview of some of the recent social science research projects performed by state agricultural experiment stations. The examples highlight social science's contribution to problem-solving in rural business, industry, farming, communities, government, education, and famiing, communities, government, education, and tami-lies. The following programs are discussed: (1) the Transition Programming Model, an agricultural budgeting program serving financially struggling farmers in Illinois; (2) California social scientists' efforts to help create farmers' markets in urban areas; (3) a grape and wine-production farm initiated with support from Washington State University; (4) the Wisconsin Experiment Station's survey that helped guide community development in Belleville; (5) community-development studies in other rural areas; (6) a Virginia research study on the effects of educational spending on student performance and economic development; (7) the Texas Assessment Modeling System that projected the impact of a Modeling System that projected the impact of a planned coal-fired electricity generation plant in Fayette County, Texas, and surveyed state crop damage in North Dakota; (8) Nevada research that documented the problem of indigent health-care costs for Humboldt County, and helped pass state legislation; and (9) a research study in Missouri examining how farm families cope with changes relating to the national farm crisis-a study that was used by Congress in drafting parts of the Food Security Act of 1985. The document also contains brief descriptions of social science research projects in other scriptions of social science research projects in other scriptions of social science research projects in other states, and numerous black and white photographs illustrate the text. This manual contains a complete set of program formats, activities, and references covered by the Dare to be You Training Program. The program, piloted in a rural Colorado County, is designed for use by parents, youth, teachers, church, and service organizations to help them deal with adolescents' organizations to neith them deal with adolescents problems and to assist youth in developing skills to help them through their teen years. A central concept of the workshops is to use the reinforcing process to increase children's resistance to adolescent problems and problem behaviors. The manual, organizations are problems and problem behaviors. nized into five sections, includes exercises designed to increase participants' self-esteem, communica-tion skills, decision-making skills, leadership, accep-tance of responsibility, and internal control. Section A of the manual outlines a series of workshops and activities for parents and other adult caregivers. Section B describes a similar series of workshops directed toward adolescents. Section C describes a variety of program and activities designed for a wide range of youth, including a dropout prevention pro-gram. Sections A through C each contain objectives, overview, workshop materials, recommended agenda, and time frame for completion, and each program and workshop also includes a brief, optional pre- and post-survey. Section D contains mas-ter copies of all handouts needed in the program. ter copies of ain annous neceden in the program. Finally, section E, on "Applications and Resources," provides: (1) supplementary materials covering ethnic (specifically, Hispanic) related issues to be used side by side with the corresponding workshops in sections A and B respectively; and (2) directories of films, slides and other educational manifestories that the section of t terials produced by the project, a request form, guides to preparing press and publicity releases, a list of relevant organizations, and a bibliography of 122 references. Report No.-AER-256

Pub Date—Apr 74
Note—73p.; Supersedes 1967 report entitled "Tax-ation of Farmland on the Rural-Urban Fringe"

ation of Farmiand on the Rural-Urban Fringe (AER-119). Pub Type— Reports - Descriptive (141) EDRS Price - MF01/PC03 Plus Postage. Descriptors—Agriculture, Assessed Valuation, Economic Development, *Land Use, *Property Appraisal, *Property Taxes, *Public Policy, Rural Areas, Rural Economics, State Legislation, Tax Identifiers-Property Values, *State Taxes, Tax De-

ferral, Tax Equity
Property taxes relate directly to rural education
finance. This bulletin discusses differential tax assessment laws and the reasons states choose to insti-tute them in 1970s. The first part of the report discusses the different types of tax laws and offers available evidence of their effects. More detailed summaries of individual state assessment laws are offered in the second section. (An addendum to the document shows the kind of state differential assessment law, if any, being used by each state as of January 1, 1977.) Differential assessment laws, cur-rently used in 31 states, can be classified into three general categories: preferential assessment, deferred taxation, and restrictive agreements. A preferential assessment law, used in nine states, is one in which land is valued according to its current use. No pen-alty is exacted if the land is later converted to another use. A deferred tax law, used in 18 states, is also one in which land is taxed according to current use value, but a penalty is levied if the land use changes. A restrictive agreement, used in 10 states,

occurs when the landowner and the local governnent agree to restrict use of the land in return for differential assessment. Assessment laws typically are instituted for one of two reasons: to reduce perceived inequities in the application of property tax to farms or to influence land use. The three assess-ment approaches defined here are compared, evalu-ated, and discussed in the context of the problems to which they respond. (TES)

This document describes a Navajo Indian pro-Inis document describes a Navajo indian pro-gram for making Navajo education more responsive to Native American cultural and educational needs. A survey of existing literature examines American Indian students' historical struggle between cultural identity and Anglo-American assimilation. As Na-vajo children may lack the schema for traditionally defined educational success and competition, schools might reexamine their customary teaching methods. The Greasewood Toyei Consolidated School began emphasizing bicultural education by weaving Navajo culture into the regular curriculum. Teachers were empowered to create their own culturally relevant study programs as part of a school-wide curriculum reassessment. Student-testing and wide curroculum reassessment. Student-testing and discipline policies were reevaluated. Teachers and assistants attended language workshops that exposed them to the Whole Language approach, a holistic learning method. An evaluation committee determined that the Comprehensive Tests of Basic determined that the Comprehensive Tests of Basic Skills (CTBS) were inappropriate for Navajo stu-dents, and suggested that other achievement mea-surements be used. Surveys indicated growing use and popularity among teachers and students of the Whole Language approach, prompting additional training and curriculum changes. Greasewood staff developed a school philosophy encouraging further integration of Navajo culture into the curriculum, narental involvement, and the use of the Whole parental involvement, and the use of the Whole Language approach. As a result, the staff developed an entire new curriculum that balances Indian cul-tural requirements with state and CTBS testing standards. The document describes further curriculum revision procedures and summarizes new edu-cational objectives for helping Navajo children achieve the balance that is one of the basic tenets of Navajo philosophy. This paper offers definitions and descriptions, and
explores the dynamics, of "strategic grantseeking"
as a means of supporting economic development

programs. Strategic grantseeking is a natural and dynamic tool usable with any economic develop-ment program. It consists of a set of concepts, procedures, and tools which are integrated into a long-term institutional commitment to a system of grant development using dynamic staff training and community linkages. One model for implementing strategic grantseeking for rural economic develop-ment uses university-based community education centers (UCEC). UCECs have characteristics and resources which easily lend themselves to strategic grantseeking. Such resources include faculty, library support, and already existing networks of vital contacts. The process revolves around the goal of creating a statewide infrastructure of local community education programs with staffs that are trained in grant writing. The process involves a series of grant writing workshops and the development of proposal development teams (PDT). Strategic grantseeking encourages the local community to seek grants independently or as part of a PDT. Co-operation between the UCECs and local community operation between the UCECs and local community education programs is imperative. A model for utilizing the UCEC as the focus for strategic grantsecking is described and 10 program implementation steps are listed. The document concludes that communities and UCECs should incorporate strategic grantsecking in their efforts to bring all available resources to bear on their economic needs and prob-

lation Survey

This report presents data on the demographic, so-cial, and economic characteristics of the U.S. Hispanic population. The Bureau of the Census collected this information in the March 1989 supplement to the Current Population Survey. Data on Hispanic households includes household composition, urban and rural residence, tenure, availability of telephone, and income. Data on Hispanic families includes composition, size, income, and poverty. includes composition, size, income, and poverty. The Hispanic population, totalling 20.1 million in 1989, continued to grow at a rapid pace. Hispanic households were more likely to live in urban areas than non-Hispanic households and less likely to live in homes they owned or that were purchasing in 1989. Hispanic families tended to be larger, were less likely to have a phone, and were more likely to be poor than non-Hispanics. Only 60% of young Hispanic adults reported they had completed 4 years of high school or more, compared with 89% of their non-Hispanic counterparts. The report contains tables that break down the population by age, sex, marital status, and educational attainment, and that estimate population figures for various His-panic ethnic groups (Mexican, Puerto Rican, Cu-ban, etc.). Other tables give information on Hispanic employment, household size, and income levels. Appendices in the report offer definitions of terms, describe changes in census processing procedures and research on data fluctuations, and provide information on the source and accuracy of data estimates. States (Geonolitical Regions)

States (Geopolitical Regions)
A review of 1980 U.S. census figures indicates that there are 6.7 million Americans who claim American Indian ancestry, compared with 1.4 mil-lion who checked "American Indian" as their race. Responses on other sections of the 1980 census indicate different American Indian population totals. For the purposes of this report, the highest figure of 6.7 million "Indians" (those claiming ancestry) was used and compared with the 1.4 million figure. New percentages of states' Indian-ancestry populations are computed and compared with the original, lower figures. The new data indicate that the Indian populations lation in each state is at least 1% of the state's total population. The 1980 census figures are also comred with figures from the Bureau of Indian Affairs (BIA), which includes only Indians enrolled in fed-erally recognized tribes and members living on or immediately near reservations. Major states such as Ohio, Pennsylvania, and Illinois report no Indian populations, according to the BIA. The BIA data give an indication of unemployment ratio for Indians. This data is applied to the higher 1980 Indian-ancestry population count to show a new, higher Indian unemployment figure for each state. Also provided are comparisons of the Indian and Indian-ancestry populations by state and county. This report was created to help influence governnns report was created to nelp intender govern-ment officials and private funding agencies towards placing more emphasis on the needs of tribal and urban/off-reservation Indian groups and providing more funding to meet those needs. Controlled Education

This report was written to teach the people and children of the Fort Belknap Indian Reservation about their history, tribal government, and its func-tions. The reservation is populated mainly by mem-bers of the Assiniboine and Gros Ventre communities. The report begins with a tribal history starting from the 17th century, when a group of Assiniboine Indians split off from the Yanktonai Sioux and migrated north to Canada. Various characteristics of the reservation, including the people, setting, climate, education, medical facilities, employment, natural resources, and recreation, are described. Also discussed are cultural traditions of both Indian communities and a history of federal acts and treaties covering the "tribal sovereignty" period (1787-1935). A section on Indian education covers relevant federal legislation and names four examples of alternative Indian education programs. Natural resource issues are discussed, including water rights, forestry history, transportation, and farm-irrigation problems. A section on the Bureau of Indian Affairs discusses federal regulations, trust funds, programs, policies, and management. The document contains a complete description of the Fort Belknap Tribal Constitution, tribal court procedure, and the educational philosophy of the Assini-boine and Gros Ventre tribes. A discussion of tribal health services includes descriptions of dental, mental health, pharmacy, and emergency assistance programs. The document also contains maps, a collection of 29 early 20th century photographs, and curriculum materials, including test questions and answers. (TES)

Report No.—ISBN-91-7372-416-5; ISSN-0348-

Pub Date-12 Jan 81

Pub Date—12 Jan 81 Note—65p. Pub Type— Reports - Research (143) EDRS Price - MF0I/PC03 Plus Postage. Descriptors—Adult Basic Education, *Adult Liter-

acy, Correlation, Enrollment Rate, Foreign Countries, Illiteracy, Models, *Needs Assess-ment, *Quality of Life, *Resource Allocation, *Social Indicators, Trend Analysis Identifiers—*Portugal

The aim of this study was to describe and compare the socio-economic factors that can be expected to influence the education system in Portugal, where urbanization has been very slow. The report examines basic needs in Portugal's 18 districts and makes recommendations about resource allocation to planners of adult education programs. Extensive tables and graphs provide data, by district, on population; substandard housing; number of inhabitants per physician and per hospital bed; health index based on child mortality and maternal death rates; index of accessibility based on kilometers of road and population density; access to culture via radio, television, libraries, and museums; and participation in trade unions and elections. A physical quality of life index based on infant mortality, life expectancy, and illiteracy rate is also provided. Several models are presented that explore the relationships among these indicators and both adult literacy and school enrollment. Trend analysis is used to predict literacy rates for each district in the year 2000. The districts are then grouped according to socioeco-nomic development characteristics and prioritized rith regard to need for adult education activities. Having demonstrated the interrelationships be-tween various development variables and education, this report recommends that the most needy districts receive an integrated program providing resources to improve housing, health, infrastructure, industrial or agricultural production, and liter-

Identifiers—*Farm Policy, *Small Farms
This is the first of two volumes of papers examining the impact of national agricultural policy on the rural poor. The seven articles in this volume offer personal accounts of minority and low-income farmers struggling to gain a foothold in American

agriculture. "It's Too Late for Our Family," by Marian Lenzen, describes a family's struggle to hold onto its small Nebraska farm and the probable fate of that farm. "Death of a Farm?" by Judy Dye, describes an organic farmer's frustrations in making lean arrangement with the Farmer's Huma Administrations. loan agreements with the Farmer's Home Adminis-tration. "Vanishing Act: America's Black-Owned Farmland," by Billie Jean Young, demographically describes declining land ownership by Blacks since the turn of the century. It also examines the trend's effect on Black political activism, economic power, and migration patterns. "Naheola, Alabama: A Re-membrance of a Black Farming Community," also by Young, describes a young woman's upbringing in a Black farming town during the 1950s and the disappearance of that town's farming base. "A Poor Harvest: Some Thoughts on Native American Agriculture," by David A. Larsen, describes the effects culture," by David A. Larsen, describes the enterior of U.S. agricultural policy on American Indian land-ownership patterns. In "We Can't Buy Any Plant Cooperative Seeds," Jes-Land: Farmworkers Plant Cooperative Seeds," Jessie de la Cruz describes her efforts to start a small farm in a federal irrigation district where most of the acreage is controlled by wealthy landowners. In "Last and Still Least," Alice Larsond discusses the economic and social dilemmas of U.S. migrants and seasonal farmworkers. (TES)

This combined textbook and workbook examines the natural environment of the Hays/Lodgepole school district, and includes some general informa-tion about the Fort Belknap Indian Reservation. Chapter 1 describes the environment of the Little Rockies, the tribal forest management, tree diseases and infestations, logging, the effects of arson and accidental fires, and geology. Chapter 2 discusses the plains area of the reservation. Topics include rangelands management, wildlife, saline seep, and pest and predator control. Chapter 3 discusses water resources and water's relationship with the surrounding environment. Chapter 4 examines wilderness areas and Fort Belknap, including the importance of wilderness preservation and its effect on the local economy. Chapter 5, "Thinking about Our Land," encourages the reader to take an envi-ronmentalist view of the reservation and its resources. This chapter specifically examines hunting and nonrenewable resource development (coal, gas, and minerals). A brief conclusion calls upon the native people of Fort Belknap to protect their reser-vation homeland. The document also includes numerous pictures and maps, a glossary of terms, a list of research sources and agencies, some suggested school projects, and a bibliography of 43 entries. (TES)

Identifiers-Assiniboine, Gros Ventre

This curriculum was written to give American Indian children an appreciation of Native American culture and two oral languages, Gros Ventre and Assiniboine. It is intended to create a comfortable cultural atmosphere while teaching K-4 children to say some words in their native language. The major content objective is to give children a repertoire of Indian words that will enhance their appreciation for Indian language and culture, resulting in a better for Indian language and cutture, resulting in a better self-image. The curriculum focuses on the past by reporting on traditional Indian home life, ways of gathering food, games, and roles of family members. The curriculum includes vocabulary lessons on numbers, colors, animals, seasons, clothing, and numbers, colors, animals, seasons, clothing, and food. There are also units offering Indian history, stories, games, sign language, education, and role playing. Numerous black and white drawings illustrate the text and the vocabulary. The guide includes lesson plans, a 27-item reference list, and a 7-page vocabulary list. (TE)

The "working definition" of "rural" is emphasized, that is, if people served by a school district perceive themselves as rural resi-dents, then the school district is rural. Data were compiled from primary sources, federal and state publications, survey research, policy papers, and discussion among professionals. Three key issues, presented in a state and nationwide context, provide the focus of this profile: (1) the demographic, georgabic, seeing and economic sequences. graphic, social and economic environments in which rural schools operate, featuring wide diver-sity of landscape and terrain, the highest birth rate in the nation, social values influenced by the Mormon religion, and an economy in recession; (2) low enrollment and inadequate funding faced by Utah's 229 rural schools, low performance and special needs of 86,000 rural students, and low salaries and retention problems of 3,800 rural teachers; and (3) rural school improvement programs organized by the State Office of Education and regional educa-tional service centers. Distance education and educational finance are also examined. This document contains 18 references. (SV)

This book was developed as a comprehensive guide to rural education resources, exemplary programs, and products. The guide is organized according to federal regions (1 through 10) and offers almost 200 citations. The cited agencies and programs, including departments of education, schools, resource centers, and outreach programs, are orga-nized by region and provider title. The citations generally include the following information: the

provider, resources offered, a description of services, eligibility requirements, types of service eval-uations available for review, a description of program goals, and the names and addresses of in-formation contacts. The book contains an index and an information form for agencies that want to be considered for inclusion in future editions of the guide. (TES)

Changes in farming and agribusiness influence rural community and rural education. This paper reports on Kentucky-farmer surveys that focused on

ports on Kentucky-farmer surveys that focused on farm characteristics and adaptive strategies. The survey, when first conducted in 1986, yielded responses from 1,000 farmers. The second survey, in 1988, drew responses from 830 members from the first group, 11.7% of whom had quit farming. The first group, 11.7% of whom had quit farming. The report is divided into seven sections, each comparing the 1986 and 1988 surveys. The first section offers general survey highlights. Section 2 discusses farm structure and demographics, examining the scale of operations, types of commodities, and farm family characteristics. Section 3 examines farmers' point of view concerning the farm economy, rural industrialization, and government policy, showing little change between surveys. but some diversity little change between surveys, but some diversity among farmers. Section 4 discusses employment trends, examining farmers' links with other eco-nomic sectors. The figures show an increasing denomic sectors. In engures show an increasing de-pendency by farmers on off-farm jobs. Section 5 discusses debt and the financial changes for farms, broken down into four categories by dependence on off-farm income and total household income. With some exceptions, there appeared to be an overall improvement in farms' financial conditions between 1086 and 1088 Section 6 offers a long discussion of 1986 and 1988. Section 6 offers a long discussion of factors affecting burley tobacco, Kentucky's largest cash crop. Farmers were surveyed on major changes brought about in 1986 by the federal Tobacco Im-provement Act. Section 7 examines the views of those who quit farming, most of whom did so be-cause they found more lucrative off-farm employment. Social and demographic characteristics of these ex-farmers also are examined. (TES)

Rural Areas, Rural Population, "Rural Urban Dif-

Identifiers-Bureau Of The Census, Nonmetropolitan Areas, Office Of Management And Budget The 'rural' definitions applied by the Federal Government, especially by two data-gathering agencies, the Bureau of the Census and the Office of Management and Budget (OMB), emphasize different dimensions of the concept, and delineate the rural-urban continuum in different ways. This report discusses the inconsistency of curent "rural"

definitions and its impact on research data collection and health policy formation. The Census Bu-reau's urban-rural definitions rely on settlement size and density, while the OMB's "metropolitan statistical area" (MSA) designation more closely follows county lines. Different designations also may be used by the same program, notably for purposes of used by the same program, notaby to papeass of hospital classification and reimbursement under federal health programs. Some have called for the development of a standard rural typology that would capture elements of rural diversity while improving the use and comparison of nationally col-lected data. But a standard typology would be difficult to create, because different typologies serve different purposes. Typologies usually are based on population size and density, urbanization, relation-ship to an MSA, and principal economic activity. The paper concludes that better measures of popula tion concentration would be helpful to distinguish between urban and rural areas within the same counties. (TES)

Identifiers—*Indian Health Service
The Senate Select Committee on Indian Affairs is considering legislation to improve mental health services to American Indians and Alaska Natives. This report is in response to the Committee's request for information on the mental health needs of Indian adolescents and the services available to them. The section on mental health problems among American Indian and Alaska Native youth examines: (1) diagnosable mental disorders, particularly developmental disorders, depression, suicide, anxiety, and substance abuse and dependence; (2) serious, but less diagnostically specifiable, problems of adolescence, such as low self-esteem, conduct disorder, school dropout, delinquency, and running away; and (3) environmental risk factors, including otitis media, fetal alcohol syndrome, child abuse and neglect, parent alcoholism, family disruption, and stressful school environment. The section on deliv-ery of mental health services discusses: (1) agencies and programs involved in service delivery, including the Indian Health Service (IHS), Bureau of Indian Affairs, tribal health programs, urban Indian health programs, and state and local service agencies; (2) programs, and state and local service agenties, (c) treatment settings and therapeutic interventions adapted to and by American Indians; (3) cultural insensitivity in Indian mental health programs; (4) community involvement; and (5) agency coordination efforts. The report concludes that 160-200 child and adolescent mental health providers are needed in IHS service areas, and presents Congressional policy options. This report contains 390 references and 37 data tables. The appendixes include a review of earlier evaluations of Indian adolescents' mental health needs. (SV)

Variance, Elementary Secondary Education, Exceptional Persons, *High Risk Students, Mild
Disabilities, National Surveys, Preschool Education, *Rural Urban Differences
Le estimate Review a total of 1, 200 surveys were

In a national survey, a total of 1,200 surveys were mailed to school administrators in rural areas in all states. Responses from 312 rural, urban, and suburban school administrators provided estimated per-centages of students in 12 high risk categories.

Survey data were analyzed by a repeated-measures analysis of variance that considered three factors: community (rural versus non-rural), risk categories, and disability (mildly handicapped versus non-handicapped). This analysis was performed sepa-rately for preschool, elementary, middle school, and high school levels. The differences between community type for all risk factors in both disability categories were significant for all levels except preschool. In almost all cases, rural at-risk student estimates exceeded non-rural estimates. Certain risk catego-ries showed large differences (greater than 7 per-centage points) between rural and non-rural groups. For the nonhandicapped, these categories were pov-erty, minority group status, and substance abuse at the elementary level and poverty at the middle school level. For the mildly handicapped, these cat-egories were depression at middle school and high school levels and poverty at all levels. The findings suggest that the social and economic stresses on students are at least as difficult as those of urban youth. This report discusses the importance of self-esteem in lowering student risk, and offers recommendations concerning federal and state poli-cies, holistic program approaches, teacher and parent training, and early intervention. An appendix provides statistical data on all risk categories. (SV)

This paper asks whether manufacturers of high

to paper axis whether manufacturers of high technology are locating production facilities in non-metropolitan areas and, if so, which industries and geographical areas are affected. It identifies high-technology manufacturers and estimates national employment trends for the sector from 1975 to 1982. National and regional employment data for to 1902. National and legional employment data for specific subsets of the high-tech sector are analyzed and high-tech development in the rural West is re-viewed, focusing on the major high-tech industries and employment in 11 Western states. The document suggests that high-tech manufacturing helped decentralize national employment from 1975 to 1982. Rural employment in the sector increased, indicating an urban-to-rural shift. The different geographical regions did not equally share new high-tech employment. Rural areas of New En-gland, Pacific, Mountain, and West South Central states saw benefits. The Mid-Atlantic and East North Central states showed a decline. New England and the Pacific states attracted more innova-tive high-tech manufacturers. Mature, high-tech industries are shifting employment to rural counties with low land and labor costs. Industries in growth and innovative stages remain close to metropolitan areas with skilled labor and specialized inputs. The high-tech industries are a potential source of rural employment. However, it is suggested that communities not concentrate their efforts on the sector. Mature firms are not likely to generate community development impact due to their limited employment and slow growth. (TES)

entifiers—ACT Assessment, Comprehensive Tests of Basic Skills, *Course Taking Patterns,

Despite the adoption of special state funding for-mulas that address the needs of small schools, Utah educators have continued to observe an imbalance in academic performance between rural and urban students. This report examines: academic achieve-ment in Utah's small schools; factors related to school size that may influence academic achieve-ment; and the ability of small schools to implement new State Board of Education policies on instructional programs and graduation requirements. Infor-mation was drawn from: the 1984 Utah Statewide Educational Assessment Program; American College Testing Program (ACT) results; a 1984 survey of about 15,000 Utah high school seniors; and a survey of principals in the state's 25 smallest high schools. Compared to students from larger schools, students in small rural high schools: (1) performed at lower levels on basic skills, particularly reading comprehension and math computation; (2) scored comprehension and math computation; (2) scored lower in noncognitive areas such as academic self-concept, peer relations, and career awareness; (3) had significantly lower ACT scores; (4) had lower socioeconomic status; (5) took fewer classes in intermediate and advanced mathematics; (6) had higher levels of participation in extra-curricular activities; and (7) reported greater enjoyment of school. Most small school teachers carried an excessive daily preparation load, and many taught classes they were not academically prepared to teach. With regard to new state requirements, most small schools will be able to provide sufficient course offerings to meet minimum graduation requirements, but will be limited in their offerings of advanced college preparatory courses and specialized voca-tional training programs. (Lawrence A) This paper examines the history of the organiza-tion of statewide social services and activities of the tion of statewide social services and activities of the Division of Work among Negroes in the Appalachian counties. From 1925-1934-its first 9 years-North Carolina's Division of Work among Negroes was directed by Lawrence Oxley. This agency was established to study black social prob lems and to help blacks organize locally to solve them. The first such state agency for blacks in the United States, the Division became a model of its type, securing black social workers in 40 counties, improved hospital care, prison reform, and unemimproved nospital care, prison retorm, and unemployment relief during the depression. Almost half of the blacks in North Carolina's Appalachian counties lived in Buncombe County, and Ashville-the county seat-became the focal point of Oxley's work in Appalachia. The racial attitudes of mountain whites, especially county officials, were a major problem. Accordingly, the Division's activities in Appalachia came to involve mediation of racial conflict, support for anti-lynching measures, advocacy of better treatment for blacks in the criminal justice system, inclusion of mountain blacks on state advisory committees, securing the employment of black social workers, and encouraging local unemployment relief. Oxley also encouraged the development of statewide social services open to Appalachian blacks. These included training schools, an orthopedic hospital, and social work ed-ucation. This paper contains approximately 26 end notes, (SV)

Identifiers—"West Virginia
This report describes problems West Virginia

This report describes problems West Virginia State has experienced in serving children, especially those in poverty-stricken areas, and recommends ways to overcome these problems. In confronting these issues, the task force made recommendations in four topic areas: Reorganization and System Change, Education and Child Care, Teen Preg-nancy, and Child Abuse. The task force identified state agency reorganization as a necessity, suggesting that the needs of families be the focus of any reorganization effort. The report suggested that departments serving public health, education, finance, partments serving public health, education, innance, and human services coordinate their efforts to provide community-based services for children, youth, and families. This "continuum of care" should include: assessment, prevention, early intervention, home services, respite care, foster homes, and residential treatment. The task force found shortages of affordable child care, preschool programs, and educations and control of the care cational opportunities for at-risk youth in West Virginia. It recommended: development of child-care tax credits, information and referral networks, and expanding early-childhood education programs. The task force also recognized a lack of available primary health care, measurable teenage pregnancy problems, and a lack of centralized information about health services. It recommended: expanding Medicaid eligibility, increasing health education (including a teen pregnancy program), and establishing incentives for health professionals to pracinstance in centure for neather professionals to practice in rural areas. Regarding child abuse, the task force recommended: an extensive public-information campaign, inservice training for law-enforcement officials, and increasing the number of state child protective-services workers. - Native Americans

Native Americans throughout North America suffer from a greater prevalence of health problems than the population as a whole. One might believe that the problem of AIDS is insignificant for Native youth, but such a belief is inaccurate and shortsighted. As of March 1989, the Centers for Disease Control reported 1,792 cases of childhood and adolescent AIDS in the United States. There are clear indications that Native children and adolescents are at risk as a population, and that certain subgroups of Native youth are at particularly high risk. Native youth who are sexually active, substance abusing, homeless, transient, or in correctional institutions are at especially high risk for HIV infection. Transient youth drifting between reservation and city form a particularly high risk bridge. Unprotected sexual activity among Native Americans places them at risk for HIV infection. Native Americans have the highest rates of sexually transmitted dis-eases of any U.S. population. The major fear, espe-cially within reservation confines, is that HIV would spread rapidly once introduced, and sexually active youth would be a major target. Culturally appropriate and coordinated AIDS educational efforts should be undertaken immediately to prevent the spread of HIV among Native youth. AIDS informa-tion must be designed to meet the needs of individ-ual youth in appropriate cultural and community context. Creative approaches using the oral tradition and youth involvement in the creation and dissemination of information may be effective. (SV)

tion Trends, Rural Development, *Rural Urban Differences, *Unemployment Identifiers—*Nonmetropolitan Areas, *States

(Geopolitical Regions)

The relationship between a state's metro and nonmetro economic performance is a key consideration in determining whether a special rural development policy is appropriate for that state. This report compares the economic performance of metropolitan and nonmetropolitan areas in 49 states, 1979-86. On average, metropolitan areas enjoyed higher levels of growth in population, employment, real earnings, property income, and real per capita income. Both metro and nonmetro areas experienced declines in real earnings per worker, with larger per-centage declines in nonmetro areas. Performance varied widely across individual states. Accordingly,

each state was categorized as "strong" or "weak" (based on whether or not its real earnings growth for 1979-86 exceeded the national aggregate rate of 8.1%), and as "balanced" or "unbalanced" (based on whether the differential of its metro versus nonmetro earnings growth was more or less than 7 per-centage points). Further consideration of special rural development programs appears particularly warranted in the 31 states with unbalanced economies. Especially strong candidates are the 11 states with unbalanced economies but strong metropolitan growth. Tables provide 1979 and 1986 data for each grown. Tables provide 1979 and 1960 data for each state on: population; employment; unemployment rates; earnings; earnings per worker; dividends, interest, and rent; transfer payments; and per capita income. An appendix briefly relates 1987 earnings data. The information and analysis is potentially useful fee histograms (SV) useful for policymakers. (SV)

ment, Industry Trends

This U.S. Department of Agriculture periodical gives current statistical information on rural America. This issue contains articles about the impact on rural areas of economic trends, employment, and industry changes. A general overview indicates that moderate improvements in rural employment since 1986 have been tempered by slow income growth. Rural areas significantly lagged behind urban ones in economic well-being. Rising interest rates cooled the economy in 1989 after 3 years of rapid economic activity. Following an unusual first quarter, stable-to-slightly falling rates were expected to support economic expansion in 1990. Rural employment in 1988-89 grew faster than metro employment for the first time since the 1980-82 recession. But some data suggest that rural growth slowed in the last three months of 1989. Nonmetropolitan unemployment rates fell dramatically since the 1980-82 recession. But teenagers, blacks, and Hispanics continued to face high unemployment in 1989. Employment growth accelerated in rural manufacturing and construction in 1987, but service-producing industries struction in 1987, but service-producing industries accounted for most new rural jobs. The rise in service-sector employment and a continued loss of natural-resouce industry jobs reflected a basic industrial restructuring in the rural United States. Nonmetro earnings lagged behind metro earnings in 1987. Nonmetro income continued to improve slowly, but a substantial gap between metro and nonmetro incomes persisted. The nonmetro poverty trate fell slightly between 1986 and 1988 but rural rate fell slightly between 1986 and 1988 but rural poverty remained higher than before the recession and higher than urban areas. Nonmetro population began to recover slightly after a sharp fall in the mid-80s. Most growth occurred in counties near metro areas. This document contains numerous ta-bles, charts, and graphics illustrating the text. (TES)

Areas, *Rural Education, School Districts

This paper examines primary issues influencing rural educational cooperatives. The paper highlights the benefits of rural cooperative formation and outthe obedits of rural cooperative formation and out-lines the key points in creating effective rural inter-district cooperatives. It is directed toward those who are interested in policy issues surrounding co-operative development and maintenance. The cen-tral focus is on local policy choices which affect rural school district cooperative development. The first section contains a working definition of cooperatives, describing different types of cooperatives and their benefits. Different types of cooperatives include: (1) formal, independent cooperatives; (2) include: (1) formal, independent cooperatives, (2) cooperatives with governing boards; and (3) cooperatives with limited scope. Keypoints of cooperative development include establishing clear goals, good organizational structure, identifying strong leaders, and using available support organizations. The second section features a brief planning guide for cooperative development and refers to potential trouble spots which should be addressed so rural school district cooperatives can prosper. Steps include evaluating district strategies, selecting a form of co-operative, and organizing it. A sample of suggested cooperative goals is offered. The document includes a bibliography of approximately 75 entries. (TES)

Identifiers-Administrator Involvement This resource book on rural administrative leader-ship is the result of 1988 interviews with school administrators involved in successful rural educaadministrators involved in successivi rural educa-tional programs. The material is divided into eight chapters, each self-contained for separate use. Chapter 1, "Getting to Know the Community," ad-dresses qualities of living and working in rural com-munities. It emphasizes that effective administrators are involved in community efficies. munities. It emphasizes that effective administrators are involved in community affairs, reflecting their commitment to rural community socialization. Chapter 2, "The Board/Administration as a Team and Respective Roles of the Team Mem-" emphasizes the importance of establishing roles, goals, and priorities with board of education members while working as a team. Successful administrator-board relations depend on understanding the expectations and respective roles within the leadership team. Chapter 3 identifies issues of leadership and different management styles. Although rural school boards may prefer one over another, the successful rural administrator needs qualities of both management and leadership. Chapter 4 exam-ines decision-making and problem-solving principles, and includes action plans for analyzing problems and making decisions. Chapter 5, "Conflict Resolution," includes strategies for dealing with the "fishbowl" or "rumor factory" phenomenon often present in rural communities. Chapter 6 includes specific tips for stress and time management, critical skills for a successful administrator to handle multiple roles, expectations, and high visibil-ity. Chapter 7 includes procedures to help the ad-ministrator build a vision for the rural school and to develop strategies for achieving that vision. Chapter 8 offers information for recruiting, inducting, and retaining effective rural teachers. (TES)

This document presents a two-part study. In the first part, open-ended questions based on interview studies were administered via paper-and-pencil tasks to 76 sixth and eighth grade students. In the second part, the earth and sun relationship ques-tions were extracted, modified, and given to 178 seventh grade students. In part one, the perfor-mance of the students on the earth orientation tasks was compared to the performance of students in previous cross-age studies and no significant differ-ence was detected between the two groups. In part two, an analysis of pretest results showed differences between the ability-grouped classes, but not for non-ability-grouped classes. Post-test analysis showed significant increases in the overall scores of the instructed classes. An analysis of covariance showed no differences between the gains of the students in different schools or the classes of different abilities. It was concluded that the instrument developed was a reliable means of eliciting and asses-sing student concepts in earth science. Statistics describing individual items and the overall test are included. Copies of versions of the test and instruc-tions for coding the answers are included. (CW)

One of the major goals of environmental educa-

tion is developing students with positive environ-mental ethics and motivated to take desirable environmental actions. Research indicates that attienvironmental actions. Research minicates that atti-tudes and behaviors of individuals are frequently modeled after the attitude and behavior of others. Since most youth spend 6 to 7 hours per day in school buildings, a coordinated school environmen-tal program that focuses on preventing and solving environmental problems at the school site can pro-vide an excellent model of attitudes and behaviors for young people to emulate. Developing and operating a school environmental plan can be an important part of a school environmental education curriculum. This digest identifies several environ-mental concerns that should be included in a school mental concerns that should be included in a school environmental program. Problems emphasized include radon, drinking water, asbestos, and sick buildings. Ways to begin a school environmental program are suggested. Three sources of additional information are listed. A list of 13 references is included. (CW)

Advances in science and technology, information in philosophy and psychology, and changes in society have placed different demands on science education than was the case in the 1960's. Post-Sputnik era curricula in science were organized to reflect the structure of the discipline and were aimed primarily at encouraging students to pursue science or science-related careers. The curriculum projects currently underway in the 1990's focus more on science for all, with an emphasis on future citizens. This digest discusses large-scale, national projects designed to reform science education. Activities that focus on teaching science to elementary and middle school students are emphasized. A list of 12 references is provided. (CW)

The underrepresentation of women in mathematics-related careers has serious economic and social implications as the United States faces a shortage of scientists, engineers, and mathematically-trained workers. Future demands for technological workers have prompted a national effort to encourage all sectors of the population to consider careers in mathematics and science. This digest discusses the variables that affect participation in mathematics-related careers as well as types of intervention programs designed to recruit and retain women in mathematics and science. Five selected resource groups are listed. A list of 14 references is included. (CW)

This paper describes the development of a sixth-grade "Matter and Molecules" unit using a new curriculum development model based on conceptual change research, the field testing of this unit in 15 classrooms and the field test results. The development process and the resulting unit are contrasted with the unit's predecessor, the "Models of Matter" unit in a commercial sixth-grade text. The development process was based on an extensive program of research on student conceptions and program of research on student conceptions and classroom teaching using preclinical interviews, pre-tests, classroom observations, journals by collabo-rating teachers, postclinical interviews, and posttests. The development procedures also included a careful content analysis and extensive in-teraction with collaborating teachers who were part teraction with collaborating teachers who were part of the development team. It is argued that the proce-dures described in this paper constitute a workable alternative to present curriculum development pro-cedures and that the alternative procedures are su-perior in two respects. First, these procedures make use of the methods and findings of recent research on teaching and on students' scientific cognition. Second, posttest results and interviews with teachers indicate that the new unit was demonstrably superior to its commercial predecessor in terms of the students' conceptual understanding and the teachers' professional satisfaction. ence, engineering, or mathematics is widely per-ceived as vital to the future international competitiveness of the United States. This report competitiveness of the United States. This report examines the major fields of study of a representative sample of high school seniors from the 1980 High School and Beyond senior cohort survey who had graduated from college by 1986 and compares those who majored in engineering, mathematics, or the natural and physical sciences with those in other fields. Among the significant findings are: (1) the proportion of males was higher than the proportion of females; (2) there were no significant differences in the proportions in majors among Whites, Blacks or Hispanics; (3) students with higher grades in high school, students who reported more time spent on homework, or students who had high achievement homework, or students who had high achievement homework, or students who had high achievement test scores graduated more frequently with a major in science, engineering, or mathematics; (4) those who studied more mathematics in high school graduated more frequently with a major in science, engineering, or mathematics; (5) the number of students who moved out of the sciences in college was larger than the number who moved in; (6) females who had higher grades and took calculus in college were less likely than males with similar backgrounds to graduate with a major in science, engineering. iess likely than males with similar backgrounds to graduate with a major in science, engineering, or mathematics; and (7) more male college graduates stated in high school that they intended to major in science, engineering, or mathematics than female college graduates. The purpose of the EQUALS programs is to increase the interest and awareness that females and minorities have concerning mathematics and science related careers. This book, produced by an EQUALS program in North Carolina, contains 35 hands-on, discovery science activities that center around four EQUALS processes—problem solving, cooperative learning, spatial skills, and career awareness. The activities are designed for use in grades 4-9. All activities were field-tested by teachgrades 4-9. All activities were field-tested by teachers from the Charlotte-Mecklenburg (North Carolina) Schools in their classrooms. The activities were then revised according to suggestions made by the teachers and the students. Information given for each of the activities included are a description of the activity, preparation necessary to set up the ac-tivity, procedures, teacher notes, suggestions for ex-tensions of the activity, and worksheets, answer keys and drawings where needed. These activities include a variety of life and physical science topics including animal life, prehistoric animals, archaeol-ogy, air pressure, surface tension, the human body, architecture, maps, packaging design, physical properties of matter, astronomy, sound, botany, symmetry, radioactivity, geology, classification, scientific careers, simple machines, acids and bases, genetics, spatial visualization, earth science, eroon, observing, elements, and mass. This hook explores current theory, research, prac-

This book explores current theory, research, practice, and policy in the assessment of higher order thinking in mathematics, focusing on the elementary and secondary grades. Current knowledge and research on mathematics learning and testing is synthesized. Examples of innovative test items for classroom use and state assessment programs are provided. Information on new assessment technologies, including computer-based approaches is pres-ented. Addressed are the following issues: (1) assessment objectives and the criteria used to construct tests; (2) identification of the parameters that characterize mathematical thinking processes; (3) the distinction between pure and applied mathematics; (4) the integration of mathematics and other disciplines; and (5) determination of the mathematical background of the students for whom an item or test is appropriate. The need for reform is related to five assumptions: (1) the society has moved from an industrial to an informational base; (2) the emphasis in education must shift to communication and reasoning skills; (3) the kinds of activities traditionally associated with higher level thinking are not limited to advanced levels of development; (4) all students can learn higher level thinking skills; and (5) that achievement testing is a conservative inhibitor to needed reform. This book recounts the many challenges and successes achieved by the American Association for the Advancement of Science (AAAS) from World War II to 1970. Included are: (1) the development of the National Science Foundation; (2) Cold War concerns about the loyalty and freedom of scientists; (3) efforts to develop an effective science cur-riculum for all Americans; (4) issues regarding air conservation; (5) use of arid lands; and (6) the ef-fects of herbicides in Vietnam and others. Important issues within the AAAS during that same period are examined such as determining how the organization should be structured and governed, redefining the role of the AAAS national meeting, and the evolution of "Science" magazine into the world's premier scientific journal. The detailed "minute books" which contain the official copies of the agenda and minutes of meetings of the council, the board of directors, and the association's major committees, the related memoranda and correspondence, plus the printed accounts of association activities pub lished in "Science" or elsewhere, provide the docu-mentation for the story. Appended are a chronological list of events from 1840 through 1970 and a listing of the people who have served as presidents of the AAAS since its founding in 1848, together with their disciplines and the meetings at which they officiated. Identifiers-*Constructivism

In this volume, physicists and social scientists challenge the bedrock of scientific thinking whose applications can prove destructive to existing social systems, and shift the debate to the need for a radical change of direction that would replace traditional "value-free" inquiry and research with a knowledge model that incorporates social responsibility, democratic principles, and comprehensive ethical standards. Presented in this book is a form of inquiry-reconstructive knowledge-concerned of inquiry-reconstructive knowledge-oncerns with the assumptions and practices of modern science and the politics of scientific discipline. Essays included are: (1) "Reconstruction and Its Knowledge Method" (Marcus Raskin); (2) "Idols of Modern Science and the Reconstruction of Knowledge" (Herbert Bernstein); (3) "Toward a Reconstructive Political Science" (Raskin, Bernstein); (4) "Ex-changes on Reconstructive Knowledge" (Noam changes on Reconstructive Knowledge" (Noam Chomsky, Raskin); (5) "Ending the Faustian Bargain (Raskin); (6) "The Human Meaning of the Information Revolution" (Michael Goldhaber); (7) "The Selling of Market Economics" (Edward Herman); (8) "Semiotic Boundaries and the Politics of Magnier, Medgerity, or Tayle, A Village, in Tendenty, 1981 (1981) (1981) (1981) (1982) Meaning: Modernity on Tour-A Village in Transi-tion" (Susan Buck-Morss); (9) "Seizing Power/ Grasping Truth" (Joseph Turner); and (10) "Conclusion: A Manifesto of Reconstructive Knowledge" (Raskin). The themes of the social construction of reality, the social sciences' ability to determine fates and fortunes, the linkage between the realms of kne wledge generation and of political direction, and that economics as a discipline is a rule of human organization (not nature), are included. This monograph describes the origins of the learning cycle, related research, and how future research might be conducted to further the understanding of might be conducted to further the understanding of theories of instruction. A wide range of information is synthesized, producing a coherent framework for better understanding the theory of the learning cy-cle. The monograph identifies various models of the learning cycle, and focuses on a cycle consisting of exploration, term (concept) introduction, and con-cept application. Topics include: (1) a brief introduction to education goals in general and then to the

more specific goals of science education; (2) the introduction of the learning cycle and the fundamental instructional method for teaching science to achieve these goals; (3) the historical origins of the achieve these goins; (3) the instorical origins of the learning cycle method; (4) attempts to provide a theoretical rationale for using the learning cycle method; (5) the nature of the learning cycle and types of learning cycles to show how their use leads to students' acquisition of scientific concepts and the development of creative and critical thinking skills; (6) a review of the empirical research; and (7) suggestions for future research. Appended are the procedures for five science activities that show the use of learning cycle. (KR)

of mathematics and their accuracy in reporting and interpreting geography text material containing mathematical information. It was hypothesized that (1) children's misconceptions or lack of experience with particular mathematical content areas would ociated with inaccurate interpretations of geography content; and (2) that mathematical competence would not necessarily be applied to reasoning about mathematically related geographical con-cepts. Sixty-four children, 16 in each of grades 3-6, were interviewed about related topics in mathematics and geography to test these hypotheses. Preliminary data analysis focusing on the correlational relationship between knowledge of mathematics and the attainment and application of geographical concepts tended to be consistent with expectations. First, there seemed to be a positive relationship between overall mathematics and geography perfor-mance. However, the data indicate that mathematically inaccurate children had lower accumathematically inaccurate children had lower accuracy scores on some but not all geographical information as compared to children who were accurate in their mathematical concepts and procedures. This suggested that the positive correlation between mathematics and geographical knowledge scores was not necessarily a function of mathematically competent children applying their knowledge to geographical contexts. There may have been a common non-mathematical component related to performance in both areas that affected some contexts but not others. Appended are examples of mathematical misconceptions and associated geographical knowledge for grades 3-5. (KR)

In this monograph, an overview of research on learning environments in science classrooms is pro-vided. Various forms of classroom research are compared, including student perceptions, direct observation, case studies, and combinations of ethorgaphic and student perception methodologies. Included are: (1) "Background," including historical perspectives, and discussions of research approaches and perspectives; (2) "Instruments for the property of the perspectives, and perspectives. proaches and perspectives; (2) "Instruments for Assessing Classroom Environment," including descriptions of six instruments and discussions of alternate forms and scoring procedures; (3) "Research Involving Classroom Environment Instruments"; (4) "Combining Quantitative and Qualitative Methods in the Study of Classroom Environments"; and (5) "Teachers' Attempts To Improve Classroom Environments." Over 200 refresees are listed. An appendix contains a "vertice of the company of the c erences are listed. An appendix contains an "acutal short form" of the "My Class Inventory" instrument. (CW)

The purpose of this study was to determine if the academic achievement of first grade students was affected by the family employment status in the

affected by the family employment status in the two-parent family where the mother works, the two parent family where the mother stays home, and the single-parent family where the mother works. Aca-demic achievement was measured using the Com-prehensive Test of Basic Skills for Reading and prehensive Test of Basic Skills for Reading and Mathematics. Thirty first-grade students were divided into three groups: 13 students from a two-parent family in which the mother did not work, 10 students from a two-parent family in which both parents worked, and seven students in which a single course with the state of the state gle mother works. Test scores were analyzed using an ANCOVA design. The results showed that there was no significant difference in the mean scores for the groups on either reading or mathematics achievement. It was concluded that the family employment that was a significant. ployment status alone did not have a significant influence on a child's achievement. (CW)

This paper discusses the results of two studies

This paper discusses the results of two studies both dealing with spatial abilities and training. The first investigated the kinds of spatial strategies and personal experiences, both nonacademic and aca-

demic, that distinguish students preparing for high spatial careers from others. The second study focused on the effectiveness of spatial training inci-dentally given during a 2-month period in mathematics courses. This study was integrated mathematics courses. This study was integrated with the first insofar as it was hypothesized that spatial abilities could be enhanced by academic experiences. Three hypotheses were investigated: (1) students preparing for high spatial careers would perform better in spatial reasoning; (2) high spatializers would report more spatially enriching nonacademic and academic experiences; and (3) high spatializers would employ more efficient spatial strategies, such as the use of mechanical drawing schemas to compare flat figures to three-dimensional analogues and rapid holistic rotations to compare three-dimensional block-like objects. Results indicate that there were significant gains for subjects dicate that there were significant gains for subjects in three-dimensional visualization and three-dimensional orientation performance. Appended is the Vandenberg Mental Rotations Test (MRT). (KR)

The main part of this project involved using a able from EDRS.

The main part of this project involved using a computer, either an Apple or an IBM, as a chart recorder for the infrared (IR) and nuclear magnetic resonance (NMR) spectrophotometers. The computer "reads" these machines and displays spectra on its monitor. The graphs can then be stored for future reference and manipulation. The program to be used for Apple is "Graphics Writer" and those to be used with IBM are "Spectrum" and "Realtime". Included with each is the documentation, listing of the program, and sample spectra. The Apple pro-grams used the BASIC language and the IBM used PASCAL. The difficulties encountered with the Apple programs are discussed. A disk catalog is in-cluded for the graphic utilities, and the IR and NMR programs. (KR)

This project involved interfacing of microcomputers with three chemical instruments—Nuclear Mag-

ers with three chemical instruments-Nuclear Magnetic Resonance (NMR), Infrared Spectroscopy netic Resonance (NMR), Infrared Spectroscopy (IR), and the spectrophotometer. A Pascal program called "Spectrum" allows data from the NMR to be read and graphed, a specific area of the graph measured, the range between points in hertz determined, the averaging out of a line, comparing and crossing of different graphs, moving a graph, and aaving and retrieval of graphs in three different methods. The sweep of the NMR is also controlled by the analog/digital converter and the program when receiving data from the instrument. Real-time en receiving data from the instrument. Real-time when receiving data from the instrument. Real-time plots by controlling the sweep from the keyboard are also possible. The Pascal program written for the IR allows data from the IR to be read and graphed, specific areas of the graph to be enlarged, absorbance to be plotted, up to three graphs to be viewed at the same time, and saving and retrieval of graphs

using three different methods. Voice synthesis was using three different methods. Voice synthesis was implemented with the spectrophotometer to aid the blind in controlling this instrument. The Pascal pro-gram can read and plot the data while reading the mode, wavelength, and data out loud at each increment. It can also read constantly at timed intervals for a blind person to make adjustments. Appendices illustrate circuit diagrams and connections between illustrate circuit diagrams and connections the interfaced instruments. (KR)

Descriptors—"College Science, General Education, Higher Education, *Liberal Arts, *Majors (Students), *Program Descriptions, *Science and Society, *Science Curriculum, Science Education Science influences every aspect of contemporary

life, yet the United States has been described as a nation of scientific illiterates. The appraisal of leaders in government, education, and the private sector is that the welfare of the nation and the individual will be improved when all citizens have sufficient understanding of science to make soundly based personal, civic, and professional decisions. This reort presents the conclusions and recommendations of the Study Group of the American Association for the Advancement of Science Project on Liberal Education and the Sciences. The members of the Study Group deliberated about the level of scientific understanding required for optimal participation in life in the 21st Century and about the nature of under-graduate education in the natural sciences necessary to achieve a proper level of understanding. Sections include: (1) recommendations; (2) the report, including "Aspects of Scientific Understanding," "Prolegomenon to a New Pedagogy," "Program-matic Approaches to Liberal Education in Science," and "Liberal Education in Science for Special and Liberial Education in Science to Special Groups"; and (3) appendices, including "Programs Involving the Core Curriculum, "Programs Constituting a Major," "Full-Year Courses and Course Sequences," "One-Semester Courses," and "Contributions to the Project on Liberal Education and the Sciences." Identifiers—*Apple II
This document describes seven science activities that combine scientific principles and computers.
The objectives for the activities are to show students how the computer can be used as a tool to store and arrange scientific data, provide students with experience using the computer as a tool to manage scientific data, and provide students with experience building computer data base files for use in science. Activities were introduced to elementary school Activities were introduced to elethentary school teachers during an inservice workshop where they were trained to use an AppleWorks data base program with the Apple IIGS computer. Students who conduct the activities use research team processes, data pooling techniques, and computers as they attempt to make sense out of random data. Each accomplished the sense out of random data. Each accomplished the sense out of random data. tempt to make sense out of rendom teal. Each ac-tivity includes: (1) grade level; (2) science skills; (3) math skills; (4) computer skills; (5) vocabulary; (6) list of variables; (7) materials; (8) procedures; and (9) curriculum extensions. Topics covered are: weight and counting using toothpicks and M&M's; the student's own personal data such as height, weight, and eye color; levers; acids and bases; and fire and atmospheric pressure. This book includes 20 science activities in the fields of scientific method, earth science, life science, and physical science. Each activity is composed of two parts-an explanatory section for the teacher and a student lab sheet. The explanatory section begins with a brief introduction designed to give an overview of the activity's main concept. Ma-terials required, preparation of materials, focusing activity, procedures for lab, and extension activities are included. The scientific method experiences in clude: observation, inferences, sorting, graphing, and classifying. The earth science experiences include: creating fossils, water pollution, erosion, evaporation, condensation, and formation of sedimentary rock. Animal movement, animal and plant classification, animal camouflage, and sorting by shape are included in the life sciences activities. Circuits, forces of pressure, sound, and insulation are included in the physical science activities. Activities use inexpensive, easily available materials.

'his book includes 25 science activities in the fields of environmental science, soil science, life science, and physical science. The activities are designed to be used in outdoor settings. Each activity is composed of two parts-an explanatory section for the teacher and a student lab sheet. The teacher explanatory section begins with a brief introduction designed to give an overview of the activity's main concept. Materials required, preparation of materi-als, answers to student lab sheets, and super scientist as, answers to student also sneets, and super sciential activities are included. The environmental science activities include: testing biodegradability of litter, calculating air pollution, and identifying sounds in nature. The soil science lab experiences include: measuring water absorption and retention of soil, soil layering, and soil formation. Animal movement, soil layering, and soil rormation. Animal movement, animal and plant classification, photosynthesis, and absorption rate are included in the life sciences activities. Observing, measuring, filtering of rainwater, recording temperatures, and mapping the schoolyard are included in the physical science activities. The development of social, thinking, process, and cooperative skills are emphasized. Activities use in-expensive, easily available materials. (KR)

This resource book includes 163 science activities for both preservice and in-service teachers. Activi-ties have been field-tested and are cross-referenced ties nave been tiest-tested and are cross-reterenced according to the processes of science and the content area covered. Each activity has been written to evoke ideas from the reader, thus enabling each activity to serve a base for additional activities. The first part of this book contains "bis" activities—"Desiretes in Sciences" estivities. Brainstorming in Science" activities. The extension of these activities can be developed into science, technology, and society issues. The second part, "Shoestring Sciencing," deals with doing more science for less money. Activities are classified by

related subject areas and science skills. The appe dix presents a Celsius-Fahrenheit conversion table, a metric system table, and a metric-imperial equivalents table. (KR)

Engineers and scientists in the United States have always been among the nation's greatest assets. Their work has led to world leadership in scientific Their work has led to world leadership in scientific and technological innovation. Recent trends are disturbing. These is concern over the quality of science and technical education at the elementary, secondary, and college levels. High school students in the United States lag behind those of other industrialized nations according to several sources. At the doctorate level, half of all graduate students in science are foreign nationals. To be economically competitive at home and abroad the United States must petitive at home and abroad, the United States must petitive at home and abroad, the United States must have scientists and engineers who can keep the nation at the forefront of technological development. Reported in this document are: (1) "Trents Affecting the Future Supply of Engineering Students"; (2) "Systemic Barriers to the Priticipation of Women and Minorities in Engineering"; (3) "What Works at the State and Local Level"; (4) "The Governor's Role"; and (5) a "State Action Agenda." Appendices include descriptions of various state initiatives, and a directory of the Women and Minorities in Engineering Project Advisory Committee. A list of Engineering Project Advisory Committee. The purpose of this study was to identify alternative life and physical science concepts possessed by preservice elementary science teachers (n=49). Science textbooks used in grades 5 and 6 were surveyed and a literature review of alternative life and physical science concepts was conducted. Results of the survey and literature review resulted in a pool of 12 life science concepts and 8 physical science concepts. Based on these results, two open-ended questionnaires were constructed to probe teachers' understanding of the concepts they were expected understanding or the concepts hely were expected to understand to be able to teach. A content analysis of the responses was then used to develop pilot ver-sions of the Life Science Misconceptions Test and Physical Science Misconceptions Test. Administra-tion, scoring and further analysis of the results of the pilot versions of the tests revealed that subjects possessed a total of 36 life science misconceptions and a total of 50 physical science misconceptions. Details of the misconceptions identified are presented. (Author/CW)

ing Skills Identifiers-*Constructivism

Learning to teach mathematics for understanding is not easy. First, practice itself is complex. Second, many teachers' traditional experiences with and orientations to mathematics and its pedagogy are addi-tional hindrances. This paper examines teaching tional hindrances. This paper examines teaching practices and reviews some of what is known about prospective and experienced elementary teachers. In analyzing practices, the document's focus is on one major aspect of teacher thinking in helping students learn about fractions: the construction of instructional representations. One teacher's practice is analyzed to highlight the complexity inherent in the construction of fruitful representational con-texts with students. Prospective and experienced teachers' knowledge, dispositions, and patterns of thinking relative to representing mathematics for teaching are discussed. It is argued that attempts to help teachers develop their practice in the direction of teaching mathematics for understanding requires a deep respect for the complexity of such teaching and depends on taking teachers seriously as learners. A list of 62 references is provided. (CW)

Much educational discourse centers on the importance of teachers' subject matter knowledge. Com-plementing concerns for subject matter knowledge is interest in developing and studying alternative pedagogies that emphasize active learning and pedagogies that emphasize active learning and meaningful engagement. Teaching and learning would be improved, so the argument goes, if class-rooms were organized to engage students in author-tic tasks, guided by teachers with deep disciplinary understandings. This paper examines the challenge of creating classroom practices based on this argument. Three dilemmas-of content, discourse, and community-are presented and discussed that arise in trying to teach mathematics to third graders in ways that are intellectually honest. The paper traces and explores the framing and response to these di-lemmas, providing a view of the pedagogical com-plexities that underlie educational discourse and raising questions about the conditions necessary to support teachers' efforts to link students with mathematics in intellectually honest ways. Many wayne women must contend with social

Many young women must contend with social and psychological barriers that prevent them from pursuing careers in science and mathematics. Be-cause of lack of confidence, misconceptions, lack of preparation, and discrimination, many women self-select themselves out of as many as 75 per cent of all careers before they reach college age. This series was designed to inform and encourage women about careers in mathematics and science related careers. This guide provides resources related to the seven 30-minute and one 40-minute video programs in the series. Each episode includes: a program summary, introductory discussion questions, brief facts and statistics, a brief biography of a significant role model in the specific area of the episode, an interest assessment form, discussion questions to follow the program, descriptions of supplemental activities, lists of supplementary materials for students, and lists of resources for users and viewers. Program topics include: (1) biomedicine; (2) chemistry; (3) computer science; (4) dentistry; (5) engineering; (6) geosciences; (7) physicsand astronomy; and (8) scientific careers for women. (CW)

Historically in the United States, few people with
disabilities have enrolled in science-related courses or entered scientific careers in part because high schools and colleges have not offered accessible training to this population. This document is the teaching and resource guide that accompanies a 30-minute video program in career development for potential employers of persons with disabilities. The program presents the opinions of supervisors, co-workers, and other employers on the experience of working with disabled scientists. The program also addresses many general concerns employers frequently have about hiring disabled people. The goals of the program are to encourage students with physical or sensory impairments to consider careers in mathematics and science; and to encourse in mathematics and science; and to encourage teachers, parents, and counselors to support disabled people in their efforts to achieve successful careers in these areas. Included in this guide are: descriptions of the materials; a program summary; a list of myths and facts about people with disabilities, a list of guidelines for employers; a discussion of insurance and tax issues for employers; a glossary of terms; and a list of resources for obtaining informa-tion and support concerning hiring the disabled.

This document consists of three papers which explore aspects of language use in science classrooms descriptively and prescriptively, based on naturalistic and experimental observations. The discovery of the importance of the verbal mode of communication through involvement in creating computer-based activities is discussed. Papers include: (1)
"Words and Science" (Jan Hawkins and Laura M. W. Martin), in which the thematic questions that tie the papers together are outlined; (2) "Taking Notes and Taking Note of Physics" (Babette Moeller, Jan Hawkins, Cornelia Brunnmer, and Sol Magzamen), Hawkins, Cornelia Brunnmer, and Sol Magzamen), in which words are regarded as a contributing medium to achieving understanding of physics concepts; and (3) "Computer Networking and the Connection of Science and Literacy Skills" (Shelley V. Goldman and Carol Reich), which reports on a study of language and communication in a classroom of deaf students. (CW)

The scientific literacy of the average citizen is primarily the result of formal education in science. Such education is very important in an increasingly technological society such as the United States. To get a feel for students' understanding and appreciation of science, it is important to examine their mas-

tery of basic skill levels as well as their exposure to more advanced concepts. The goal of this report is to provide some of the data necessary to evaluate how well the secondary school system is meeting these goals. The focus of this initial report is on coursework in science and mathematics as one mea-sure of the successes and shortcomings of the educasure of the successes and shortcomings of the education system. The bulk of the analyses described in
this document was carried out on the base year data
from the High School and Beyond Study. Related
data from other sources are discussed to fill out the
picture provided by these analyses. Highlighted in
this report are: (1) "National Trends"; (2) "Regional Diversity"; (3) "Physics and Chemistry"; (4)
"Race and Ethnic Background"; (5) "The Gender
Gap in Mathematics and Science"; and (6)
"Post-Secondary School Plans." (CW)

The purpose of this study was to determine if a 7-hour "Project Learning Tree" (PLT) workshop

had a positive effect on pre-service teachers' attitudes toward teaching environmental education. The subjects of the study were 140 pre-service teachers enrolled in an elementary science educa-tion course in Pennsylvania. Attitude was measured the "Environmental Education Attitude using the "Environmental Education Attitude Scale" developed for the purpose of this project. The findings of the study include: (1) pre-service teachers showed a significant positive change in at-titude score toward environmental education after participating in the 7-hour PLT workshop; and (2) pre-service teachers showed significant positive changes in their mean attitude score on three of the four subcomponents of the scale. The cumulative score on the subcomponent scales for comfort/dis-comfort, need, and equipment/technology showed positive changes. The cumulative score on the time subcomponent did not show a positive change in attitude. (KR)

This study was designed as a systematic investigation."

This study was designed as a systematic investiga-tion of the feasibility and effectiveness of student authored videodisc presentations in a non-major inauthoried videotisc presentations in a non-major introductory level college biology course. Students (n=66) used a quick-learn authoring system, the Macintosh computer, and videodisc player with color monitor. Results included: (1) students managed the system effectively and produced lessons averaging 14.6 minutes long; (2) performance on a test covering videodisc lessons showed no differ-ences between those in the student authored classes compared with those who observed teacher au-thored videodisc presentations; (3) students showed positive attitude toward the project despite the fact that it took them 12-15 hours to prepare the video-disc presentations; and (4) success does not appear disc presentations; and (4) success does not appear to be correlated with previous computer experience or mathematical ability. Demonstration videodisc lessons on microscopy, the protist kingdom, and interaction of organisms are included. A bibliogra-phy of 70 references is included. (KR)

Identifiers—*California
This book is intended for everyone in California concerned about how well students are prepared for college. It describes the competencies in mathematcollege. It describes the competencies in mathematics necessary for success in college and university work. This statement discusses the following: (1) an emphasis on encouraging students to experience the beauty and fascination of mathematics; (2) stress on beauty and fascination of mathematics; (2) stress on building students' confidence in their reasoning power; (3) insistence on developing analytic reasoning ability; (4) advocacy of students' application of the concepts of algebra and geometry to the solution of unfamiliar problems; (5) recognition of the importance of students' developing complete understanding as a way of building their confidence in mathematics; (6) a call for students to have a history of successful experiences in finding solutions when mathematics; (6) a call for students to have a history of successful experiences in finding solutions when encountering new mathematical situations; (7) stress on the need for students to discuss and write about mathematical idea; and (8) an elaboration of appropriate uses of calculators. The book is divided into four parts: (1) "Expectations for Entering Freshman"; (2) "Prerequisites to Algebra 1"; (3) "Course Outlines for Adgebra 1, Geometry, and Algebra 2"; and (4) "Outlines for Advanced Courses in Mathematics." The appendixes include: sample problems; competencies in speaking, listening, reasoning, and studying: the recommendation of the soning, and studying; the recommendation of the Board of Governors; and a discussion of the prob-lems with calculus at the high school level. This resource guide accompanies "You, Me, and Technology," a 12-program series on science, technology, and society for junior high, high school and nology, and society for jumor nigh, high school and vocational students. Designed to be viewed separately or together and in any sequence, each program is matched by a lesson in this guide which contains an overview of the topics, content, objectives, and suggested teaching activities. General instructional activities to introduce the programs are included. Those to follow the programs include inteincluded. Those to follow the programs include integrated activities and activities specific to each of five content areas: science and technology, mathematics, social studies, English/communications, and vocational education. These areas reflect the impact of the interactions of science, technology, and society on human life and on the schools. A set of transparency masters with suggestions for their use in the classroom to supplement the activities is included. A matrix correlates the contents of the video programs with textbooks in science, technology, and social sciences. There are also recommendations for readings and additional resources. (KR)

This paper describes the developmental approach

This paper describes the developmental approach to moral education guided by the view that the student is an active constructor of knowledge who prodent is an active constructor or knowledge who pro-gresses through a succession of increasing psychologically and philosophically robust stages of moral reasoning. The developmental approach to moral education attempts to avoid the arbitrary norms of society and naturalistic fallacy by coordinating philosophical principles of human actions and values with the facts of natural stage growth. Teaching strategies used when discussing moral, ethical, and science-technology-society (STS) issues need to be consistent with the moral growth stages of their students so that meaningful learning will occur. The strategies for using moral dilemmas and STS vignettes and an illustrative sample moral di-lemma are included. A table illustrating Kohlberg's Moral Stages of Reasoning is attached. (KR)

Research has shown that parent involvement in a
child's education at home and school has a significant impact on the student's success. The Teachers

cant impact on the student's success. The Teachers Involve Parents in Schoolwork (TIPS) project, which has been operating in a Baltimore City middle school for 3 years, offers processes and models designed to increase the involvement of parents in productive roles as volunteers and provides a struc-ture for the middle grades teacher to develop and provides a structure for the middle grades teacher to develop and conduct a program integrating art and social studies. The process links art appreciation, history, and criticism to middle school social studies curricula and uses parents to present lessons on well-known art work government, and citizenship. This paper presents the first formal evaluation of the TIPS process. Data were collected from over 400 TIPS process. Data were collected from over 400 middle school students and questionnaires measured students' recognition of and reactions to American artists and paintings that they saw in their social studies classes. The data is analysed and presented in tabular form; and it is concluded that the TIPS process can be a useful way of providing stuwith a background in art awareness, art history and art criticism, especially when teachers trained in art education are scarce, time is tight, and budgets are low. This paper reports on a research project designed to determine if the model Life Management Curriculum formulated in Project III-6-987 and available at California community colleges since 1987 is meeting intended goals and if male and female students are making progress in achieving career/family balance and improved quality of life. An evaluation device was designed to determine quanbehavior and to differentiate its effectiveness as between females and males, different age groups, urban/rural settings, and ethnic backgrounds. Data tween females and males, different age groups, ur-ban/rural settings, and ethnic backgrounds. Data were gathered from 14 classes representing 10 cam-puses. Using the Statistical Package for the Social Sciences (SPSS), the data were analyzed and the results showed the program to be highly successful in meeting needs of students of all ages, particularly women. The questionnaire and all statistical and demographic information are included. (NL)

This resource, a publication of the Trade and Development Program, was designed by a coalition of 10 farm and church groups to help U.S. citizens discover the connections between their lives, world food trade, and the needs of developing nations; it can be used for a single program, a multi-session workshop, or a study series. Targeted for high school and college students and also for adult discussion groups, the subject matter provides back-ground for secondary social studies courses and college courses in economics, international developcollege courses in economics, international develop-ment, and government policy. The unit includes a study booklet, a program guide, and supplementary materials. The study booklet contains 6 sections: (1) introducing trade linkages; (2) talking about trade policies; (3) developing nations' agricultural and economic development; (4) U.S. agricultural and trade; (5) making hard choices; and (6) becoming involved. A list of suggested resources and a glos-sary are included. The program guide is designed to assist class leaders or discussion groups focus on agricultural trade, development, and U.S. agriculture. Program activities presented are intended to correspond to each section of the study booklet. The supplementary materials consist of profiles of eight developing countries and briefs on three agricultural commodities. (DB)

Developed to supplement elementary social stud-ies curricula, this guide provides instructors with accurate background information and suggests interdisciplinary classroom activities that combine an-thropology with fine arts, language arts, environmental science, history; and political sci-ence. The history of the Northeast region and the Delaware (Lenape) and Six Nations Iroquois is the primary focus of the guide. Included in the 11 les-sons are 47 classroom activities for elementary students. Lessons are provided on the following topics: cultural diversity and environment, early times, language, hunting and fishing, harvest, family, oral tra-ditions, clothing, government, and life today. Following the lessons are five resour.e lists covering: Native American supplies; publications, au-dio-visuals and loan lists; trips; governments today; and powwows. A glossary and a reading list are also provided. Fifty-seven maps, illustrations, and photographs (some of which are in color), suitable for reproduction, appear throughout the volume. (DB)

Social Studies, Social Values, Surveys, Teacher Social Studies, Social Values, Surveys, Teacher Attitudes, Values, Voting, "Youth Informed and involved citizens are crucial to the functioning of U.S. democracy, yet many people

increasingly are reluctant to exercise even the most basic responsibilities of citizenship. Participation in the political process is disturbingly low. If this trend is to be reversed, the country must strengthen civic values and expand the civic participation of the next generation. This study was commissioned to examgeneration. This study was commissioned to examine youth understanding of and commitment to three important aspects of citizenship in a democracy: meeting personal responsibilities; serving the community; and participating in the nation's political life. The study assessed young people's views on such topics as personal values and aspirations, community service, politics, images of the United States, concepts of citizenship, and influences on their notions of citizenship and civic involvement. Social tions of citizenship and civic involvement. Social studies teachers also were interviewed, on the asstudies teachers also were interviewed, on the as-sumption that they shoulder the major responsibil-ity for citizenship education in the schools. There were four major findings of the study. First, young people cherish U.S. freedoms without understand-ing what it takes to preserve them. Second, this ing what it takes to preserve them. Second, this generation is markedly less involved and less interested in public life than previous generations. Third, institutions with the best opportunities to teach young people citizenship-family, school, and government-have been ineffective. And fourth, young people themselves are asking for more ways to get involved. A four-part appendix is included contain-ing: a completed summary questionnaire form from the youth and teacher surveys; an explanation of the survey methodology; focus group materials (discus-sion outline and overview of the participants); and materials related to the one-on-one interviews (questionnaires and a profile overview of the partici-

This report identifies important questions in mu-Specifications, Theater Arts,

sic curriculum content in undergraduate study.

Generally, the music curriculum must deal with: (1) training in the making of music; (2) musical "ob-jects"; and (3) the study of music in the larger con-text. Part 1 reviews the: (1) current undergraduate music curriculum; (2) undergraduate music environ-ment; (3) undergraduate music curriculum and its academic contexts; and (4) a determination of the content of undergraduate music courses. Part 2 presents a survey of national practices, including data from questionnaires circulated to institutions identifying themselves as having music teaching responsibility in general students courses. Charts included in the report present information on the following topics: issues in music, major problems, course requirements for non-majors, performance opportunities, and music history courses. It has become increasingly important for teachers to understand the key issues of values education.

Values taught in the formal curriculum and trans-mitted in the hidden curriculum have a profound effect on the total educational experiences of stu-dents. Careful and thoughtful reception and trans-mission of communication concerning values are skills that assume more and more significance in a rapidly changing world. This paper surveys recent literature in the area of values education. An 11-item bibliography is included. (DB)

Identifiers—"Arizona
The role of music education in the curriculum and
the specific skills that should be developed by students at particular grade levels, as articulated by the
state of Arizona, are described. It is stated that a
comprehensive music program should afford students experiences in: performing/reading, creating/writing, listening/describing, and values. The

document is organized into three grade level group-ings (K-3, 4-6, 7-8) with a delineation of the skills in each of the four areas of experience that students at particular grade levels should develop. The skills that high school students should possess after completing courses in vocal music, music literature, or fine arts also are outlined. A 33-item annotated bibliography of sources relating to music education and a glossary of musical terms are included. (DB)

The Arizona Social Studies Framework formula

The Arizona Social Studies Framework formulates goals for student competency in four broad categories: knowledge and cultural understanding; categories: knowledge and cultural understanding; understanding of democratic principles; individual and group participation in social political affairs; and fundamental skill attainment for effective citi-zenship. Under each social studies goal are listed the basic learnings that comprise the K-12 social studies program. These curriculum strands are constant in program. Inese curriculum strands are constant in every grade level; no options are to be dropped or added from one year to the next. The strands under Goal 1 (knowledge and cultural understanding), for example, are: historical literacy, geographic literacy, economic literacy, social-political literacy, cultural literacy, and ethical literacy. For each of 4 grade levels (K-3, 4-6, 7-8, 9-12) there is a 4-column presentation of essential skills under the following headings: goals and strands; essential/exit skills; content and descriptors; and instructional strategies/related concepts. The essential skills column is identified as the critical component of this document. An appendix outlining criteria for evaluating instructional materials is included. (DB)

cal Rhetoric

This essay examines some of the campaign communication behavior during the 1988 presidential race in terms of ethical criteria for a participatory democracy. Overall, this campaign violated several standards for ethical behavior through strategies such as over-reliance on emotional appeals, ridicule, failure to focus on relevant issues, and avoidance of debate. The Atwater/Ailes/Bush team is treated as a paradigm case and the conclusions are presented as applicable to Democrats and Republicans alike. The paper concludes with a discussion of the future of participatory democracy in the United States in light of recent campaign communication strategies. A 33-item bibliography is included. Identifiers-*Japan (Tokyo) There is a need in Japan to develop upper-level secondary schools to meet the demands of Tokyo's special characteristics as an international city with a large population of foreigners and citizens who travel and are employed for periods of time overseas. There also is a need to ensure smooth entry of children into the schools upon reentering the courty. This has led to the establishment of an international upper level secondary school. At the time of its opening in April 1989, the school enrolled 237 students (85 boys and 152 girls), admission is carried out on the basis of individual selection either by competitive examination or by a personal interview and a written essay. A fundamental goal of the school is to produce students with a broad international perspective as well as a broad humanitarian vision and a first-class ability in foreign languages. The curriculum is arranged to enable students to enter four-year universities overseas. The first year enter four-year universities overseas. In lirst year curriculum design consists of core subjects; second and third years are mainly electives; 26 credits in English and 12 in "International Understanding" are required for graduation. An extensive descrip-tion of the school's characteristics and practices is tion of the school's characteristics and practices provided as well as a chart of the entire curriculum for each year, showing electives and compulsory courses; a typical class day timetable, and a list of main school events. One of the problems one encounters in attempting to learn about another culture is the possible distortion brought about by one's own cultural biases. The overall purpose of this unit is to help students underoversan purpose or this unit is to nelp students under-stand perceptions: how they can differ and how cul-tural biases are acquired and transmitted. Indian culture is an appropriate vehicle for this examina-tion because it is a culture little known in U.S. society and a country with which many in the United States anticipate closer ties. The lesson's seven objectives are to enable students to: (1) understand the concept of perception; (2) become aware of cultural biases; (3) understand how cultural biases are transmitted; (4) compare common perceptions of India about the United States and the United States about Indians; (5) understand the perception of India transmitted throughout U.S. culture by the mass media; (6) understand that the U.S. and India share media; (6) understand that the U.S. and india share common values; and (7) gain exposure to a realistic view of contemporary Indian life. Six class activities are outlined concerning or involving: (1) visual per-ception; (2) Indian perceptions of people in the United States; (3) perception and the mass media; (4) proverbs, quotes: another way of perceiving culture; (5) views of contemporary India (through film, video, or slides); and (6) an essay exercise. *Beginning Teachers, Elementary Secondary Education, Higher Education, Preservice Teacher Education, Program Effectiveness, *Self Efficacy, *Student Teachers, Teacher Attitudes, *Teacher Education Programs, *Teacher Education Progr Effectiveness

Four interval studies were conducted to examine possible developmental and transitional stages of efficacy in a teacher education program. Data were collected from 57 student teacher candidates at the beginning of their senior year. During student teaching 46 students (81 percent) participated, and during the beginning teacher year 35 first-year teachers (76 percent) participated. Four instruments were tested and employed to assess educational beginning teachers (81 percent). tional beliefs and preparation attainments, and student teacher and teacher efficacy. The study showed that these students did not view teaching in relation to preparing and managing students. At the preservice level, the development of pedagogical knowledge and skills appeared to mean success performance. When the candidates were placed in classroom settings, some facets of efficacy devel-oped during the program were strengthened. Yet, a lack of confidence to discipline students during student teaching was also felt during the beginning teaching year. The findings suggest that a high sense of efficacy begins early in teacher preparation programs. The results also suggest that there are devel-opmental stages of teacher efficacy and that teacher ididates only experience perfunctory behaviors at the preservice level. (JD)

A diversity of practices exists with regard to the actual content taught in graduate-level courses in introduction to educational research. In a recent Delphi study, a national panel of 21 experts in edu-cational research generated a list of 114 skills and knowledge areas they considered worthy objectives in an introductory course. What remained missing in the Delphi study was an answer to the question, "What is the relationship between what experts say should be taught in an introductory course and what is actually required in practice?" This study is an attempt to address this question. In addition to course content requirements, demographic information was collected to answer questions about who teaches the course and how they view its purpose. Results are displayed in tables. Three appendixes contain the following information: (1) the 114 skills identified by the Delphi panel; (2) the names of the members of the Delphi Panel; and (3) the reserach skills and knowledge areas questionnaire.  This paper describes the work of one collaborative—The Consortium on Teacher Quality and Supply—that combined the energies of several
 organizations in order to respond to the minority
 teacher shortage. The consortium was comprised of
 six historically black colleges and universities in the
 south and three graduate institutions of education.
 Chronologically, the paper begins with the estab ishment of the consortium in 1987, the introduction of key players, and a discussion of aims. It then
 moves to the collaborative process the consortium
 moves to the collaborative process the consortium
 moderwent, explains the activities designed by the underwent, explains the activities designed by the consortium to address the minority teacher shortage, and ends with a progress report on current con-sortium activities. Conceptually, the paper examines the collaborative process in relation to what the literature has to say about successful col-laborations, and uncovers some new understandings about factors which help support and facilitate col-laboration. Descriptors—*Clinical Supervision (of Teachers),
Feedback, *Interaction Process Analysis, *Physical Education, School Based Management, Secondary Education, *Student Behavior, Student Evaluation, *Supervisory Methods, *Teacher Behavior, Teaching Experience

The purpose of this study was to ascertain if changes could be made in the teaching effectiveness of an experienced secondary physical education teacher by a colleague acting as the change agent. Both clinical and instructional models of supervision were used and goals were established on several criterion process variables that were monitored. Statistically significant improvements were not found tistically significant improvements were not found on the variables monitored, but the overall process of instruction did improve. The teacher's attitude or instruction and improve. The teacher's attitude toward this type of supervision was favorable. Results lend credence to the trend of empowering teachers rather than administrators with more responsibility for improving instruction in public schools. (Author)

Identifiers-*New Jersey

This paper recounts the controversy surrounding the development and implementation of alternate route teacher certification in New Jersey. The oproute teacher certification in New Jersey. The op-posing forces in the debate were the governor and the commissioner of education versus education professors and teacher unions. The debate is pres-ented as an uneven conflict in which the forces of the state government, embodied in the political power of the governor, outweighed the influence of the educators. The pros and the cons of each side of the debate are outlined. Some concerns that have been expressed about the alternate route certificabeen expressed about the alternate route certifica-tion program are: insufficient supervision and evaluation of teachers, its extensive use for staffing private schools, and the stress teachers experience teaching in difficult situations while they are meetteaching in difficult situations while they are meeting the requirements for academic seminar participation. The alternate route may face an uncertain future because of a change in the state's administration; a new governor and commissioner are reviewing the program with some skepticism and different political priorities. Some positive aspects of the alternate route are pointed out. It is a mechanism for staffing urban schools, and it has brought some capable and mature people into teaching. Twenty-nine references are listed. (JD)

Singapore has attempted to use school-based in-tervention studies as a vital feedback system in de-veloping a more viable and sensitive preservice curriculum. The Institute of Education (IE), the sole curriculum. The institute of Education (i.g., the soie trainer of teachers in Singapore, is conducting ongo-ing research in the area of effective teaching strate-gies, which aims at assessing the effectiveness of methods used in fostering learning strategies and metacognitive skills in students of varied backcharacteristics in English and mathematics studies. Data from two concurrent studies provide information on IE students and secondary pupils learning strategies and academic ability. A sample is presented of differential learning behaviors of pupils from three different ability streams: special, express, m three different ability streams: special, express, and normal. Findings from a questionnaire submit-ted to teachers indicated that the teachers' percepted to teachers indicated that the teachers perceptions of effective strategies did not seem to match their pupils' experiences with the strategies. However, the pupils' ability seemed to influence the teachers' perception of the effectiveness of the learning strategies. Preservice teachers need to know that all pupils, irrespective of ability, should be taught the use of effective learning strategies. A brief description is given of the continuing second phase of this study; four tables displaying the data are appended. (JD)

One requisite of a profession is that its practitioners hold a credential certifying that the individual is competent to provide needed services. In the fields of health, physical education, recreation, and dance, diverse groups compete in credentialing practitioners. The four papers in this collection dis-cuss who is, or should be, responsible for professioncuss who is, or should be, responsible for professionalization in these fields. The first paper, "Professionalization: Everbody's Right But Whose Responsibility?" (Marcia J. Carter), reflects on the various groups which assume responsibility in credentialing activities and why their activities have become intertwined. The second paper, "Professionalization: Whose Responsibility?" (G. Ann Uhler), emphasizes the role of professional preparation institutions and the impositions placed on higher education by other groups. The third paper,

"Professionalization: Whose Responsibility? Profes-"Frotesionanization: whose responsionary? Frotesional Societies?" (William B. Cissell), stresses the increasing vested interest of professional societies in credentialing. The fourth paper, "Professionalization: Whose Responsibility? Our Future Agenda: Crosstalk" (Florence Grebner), takes the position that it is no longer family for any one ground that it is no longer feasible for any one group to create a profession or to represent a profession suggesting, rather, that a collegium be formed enabling interdependent responsibility. Descriptors—*Analysis of Variance, *Cooperating Teachers, Elementary Secondary Education, Higher Education, *Interrater Reliability, Preservice Teacher Education, Self Evaluation (Individuals), *Student Teacher Evaluation, *Student Teachers, *Student Teacher Supervisors, Teach-

ing Skills
This study sought to determine the degree of variance found existing among three different groups of evaluators relative to their assessments of the teach-ing competencies demonstrated by 60 preservice teacher education students. Data were obtained relative to the undergraduates' self-evaluations regarding the ability to demonstrate 25 teaching competencies. Data were also obtained from the evaluations of those students' cooperating teacher(s) and university supervisor(s) regarding the same 25 teaching competencies. The rating scale contained the same criteria related to the teaching-learning process. Descriptive and inferential statistics were applied to the data to determine significant differences in the assessments made by the three groups. In most instances, the mean values were not significantly different for the three groups of evaluators. The greatest differences were found between the evaluations derived from the student teachers and those obtained from cooperating teachers and university supervisors on maintaining a professional appearance. Another significant dif-ference between the student teachers' evaluations and those of the cooperating teachers had to do with using appropriate resources for the development of lessons. Data from the study are displayed on appended tables, and the evaluation instruments are included. (JD)

This study employed a classwide peer recording (CWPR) program to demonstrate the efficacy of opers as behavior change agents in a physical active-

peers as behavior change agents in a physical activity setting. The study sought to determine whether or not the frequency of stimuli conditions presented by a game changes when a CWPR procedure is in effect, and whether or not the frequency of actual responses to the stimuli changes under these circumstances. The quality and/or accuracy of actual responses and their rate of success were also examined. The subjects were 4 college students in a class of 18 students enrolled in an advanced soccer class. The four peer recorders were trained in the use of the Pioneer Instrument for Measuring Soccer Play-ing Ability in Regular Setting (PIMSPARS) following Aonity in Regular Setting (FIMS) 743) follow-ing baseline conditions. Results revealed that the introduction of the CWPR procedure produced im-mediate change and gains in the frequency of actual responses for all subjects. Withdrawal of the CWPR procedure produced a consistent decrease in behavor patterns for all subjects. These findings indicate the effectiveness of peers as behavior change agents in improvements in motor behaviors in physical activity settings. The instrument used in the study is appended, and behavior changes are illustrated in charts. (JD)

Identifiers—*North Carolina
An overview is presented of a third-party evaluation of the North Carolina Career Development Plan, at the end of the third year of a four-year pilot program. Under scrutiny were the Teacher Performance Appraisal Instrument (TPAI) and the Principal Performance Appraisal Instrument (PPAI), well as the appeals process for those delayed for advancement on the career ladder. The panel concluded that the instruments are adequate for the purposes of certification and quality assurance. In relation to the purposes of career development and professional growth and development, the instru-ments seemed to be functioning reasonably well, considering that the pilot program was only 3 years old. Areas where they should be strengthened and expanded were noted. While the appeals process appeared to work quite well at the initial peer panel stage, several cases that reached the later appeal boards had not gone well. It was recommended that board members be well trained in the Performance Appraisal System and that the board review be focused on the same data and guidelines as the earlier peer review. The report also highlights some per-sonal and political factors that were encountered in the conduct of the investigations and in the uses made of the findings. (JD)

This review of journal literature proposes that eth-nic/race-specific research on cognitive/learning styles provides models for cross-cultural and multi-cultural classrooms that will maximize learning through building self-esteem and devoloping a rea-son for learning. The intent of the review was to discover patterns and themes developing across cul-tures and access tudies. Helblights of course learning tures and across studies. Highlights of journal arti-cles are provided in table format; an index to citations follows the table. The aspects and findings are categorized to develop a taxonomy of aspects

and learner orientations. The taxonomy provides topical groupings that facilitate further identifica-tion of cross-cultural aspects and implications for maximizing learning for all students. The focus is on how the background factors that students bring to school can be matched by school policies suitable for a variety of students. (JD)

The first chapter of this monograph on sport law

The first chapter of this monograph on sport law presents tort issues, primarily negligence. A discussion of some fundamental negligence concepts is followed by three sections devoted to the prime risk areas in school and collegiate settings. A review of the principles of risk management is included. The second chapter focuses on contractual matters.

Among the topics covered are lease agreements, agreements with concessionaires, athletic scholar ships, vendor contracts, and employment contracts with coaches. The independent contractor relation-ship is also addressed. The third chapter reviews constitutional law principles as applied to sport set-tings. First amendment issues including freedom of speech, freedom of religion, and establishment of religion are presented. A review of the legal challenges raised to drug testing programs is provided. Due process considerations are covered with a discus-sion on state action and liberty and property interests in sport. A section on equality of programs discusses the legal challenges made to sex-based discrimination in athletic participation and coaching. A table of cases concludes the monograph. (JD)

Identifiers-Research About Teacher Education

This monograph presents information about insti-tutions of higher education where teachers are educated and about the faculty, students, and programs of these institutions. Information is presented under six headings: (1) "Introduction and Methodology" (Gary Galluzzo); (2) "Institutional Characteristics" (Richard Arends and Gary Galluzzo); (3) "Students: A Profile" (Antoine Garibaldi and Nancy Zimpher); (4) "The Elementary Education Professoriate" (Mary Kluender and Edward Ducharme); soriate" (Mary Kluender and Edward Ducharme);
(5) "Student and Faculty Perceptions of Program
Quality" (Kenneth Howey); and (6) "Multiple Purposes for Using Data in Teacher Education" (Sam
Yarger). Ninety institutions taken from the AACTE
membership list of 713 institutions constituted the sample; 1,141 elementary education preservice teachers and 251 professors in elementary educa-tion returned their questionnaires. Faculty and student questionnaires supplied demographic information as well as information such as age, gen-der, race/ethnicity, and salary; and respondents' opinions concerning the quality of programs, the rigor of coursework and requirements, and students' future teaching plans. The institutional question-naire solicited information characterizing the institutions: their enrollments, the academic abilities of their enrollees, and selected features of the elementary education programs offered. Findings are presented in tables and graphs accompanied by and graphs accompanied by narrative discussion. (JD)

Nine student teachers kept logs and responded to
mestionagires during their two student teaching as-

questionnaires during their two student teaching as-signments of 7 weeks and 8 weeks in the spring semester. The student teachers transitioned from observing to actual teaching more quickly in the second assignment. Within the assignments, however, the time they spent observing at the beginning of their assignment varied widely. In addition, there was significant diversity in the student teachers' experiences in their transition and supervision, regard-less of their ability and performance, and despite the emphasis of the program. All student teachers who experienced inadequate transitioning and supervi-sion were dissatisfied with their assignment, but strong student teachers appeared to overcome the situation while the weak floundered. The findings suggest that an emphasis on transition and supervision is important, but that this emphasis does not ensure quality transition or supervision. Both the transition into teaching and supervision can be en-hanced by emphasizing the importance of both elements, providing information on how they can be done effectively, and monitoring these activities throughout student teaching to ensure appropriate implementation. Ten tables are appended. (JD)

This Senate bill would initiate a variety of measures aimed at improving the recruitment, retention, and professional development of qualified elementary and secondary school teachers. It focuses these efforts particularly where acute teacher shortages have been identified, including shortages of minor-ity teachers, teachers for limited English proficient students, disabled students, preschool age children, and teachers for certain subject areas such as math and science. This report from the Committee on Labor and Human Resources contains: (1) summary of the bill; (2) legislative history; (3) background and need for the legislation; (4) committee views on recruitment, teacher enhancement, demonstration projects, and studies and evaluation; (5) votes in committee; (6) cost estimates; (7) regulatory impact statement; (8) section by section analysis; and (9) changes in existing law. Identifiers—"Professional Practice Schools
This collection of papers addresses three important aspects of professional practice schools: student
learning, teacher development, and implementation
issues related to collaboration among institutions
and state policy environment. The first paper, "The

Child as Meaning Maker: The Organizing Theme of Professional Practice Schools" (Ellen M. Pechman), focuses on the implications for classrooms and schools in what is known about how children learn and develop socially and emotionally. The new roles teachers play as mediators of student learning are discussed. The second paper, "Teacher Develop-ment in Professional Practice Schools" (Ann Lieb-erman and Lynne Miller), builds on a concept of professional practice, maintaining that teachers themselves are an important source of knowledge about teaching and equating the renewal of teaching with the renewal of schools. A framework is offered for developing a school culture that supports contin-uous inquiry and the improvement of teaching. The third paper, "Professional Practice Schools in Con-text: New Mixtures of Institutional Authority" (Barbara Neufeld), lays out a number of areas of critical importance in implementing professional practice schools, such as issues surrounding collabopractice schools, such as issues surrounding consoloration among institutions, definitions of teaching and learning, and the policy context in which design and implementation will take place. The final paper, "Afterword: A Look at Professional Practice Schools with an Eye toward School Reform" (Marsha Levine), discusses the relationship of these schools to the broader school restructuring agenda. Identifiers—*Education for All Handicapped Children Act. *Ohio (Cleveland)

To comply with the Education for the Handicapped Act, comprehensive needs assessments were conducted in Ohio relative to appropriate physical education programming in the least restrictive envi-ronment. Results from an assessment in an urban school district confirmed the belief that physical education teachers did not possess needed compe-tencies and were in need of extensive professional development. This paper describes the inservice program which was carried out in 5 phases from January, 1989 to June, 1990 for 27 physical educa-tion teachers in the Cleveland City School District. Eight learning modules were completed in a series of on-site training workshops. Next, the teachers wrote a handicapped activity packet for each of the 114 handicapped students in the district physical education classes. In phase 3, activity packets were implemented from September to April. Evaluative information was collected and overall effects were determined beared on heading meditive tridents, shown to the control of the contro determined based on handicapped students' change in motor proficiency and teachers' change in knowledge and attitude. In addition, an ethnographic ex-amination of physical education in the district was amination of physical education in the district was conducted. Results of the program were dissemi-nated through a policy workshop for selected school districts in Ohio. The eight learning modules used in the program are appended as well as a formative evaluation of the program. (JD)

Education Amendments 1972

This paper addresses the concerns of physical educators who must implement coeducational pro-

grams in secondary school physical education. Title IX regulations which relate directly to physical education are presented as well as the Oregon Administrative Rules. The paper covers eight concepts of federal and state regulations that have direct impact on physical education. These concepts are: (1) on physical education. These concepts are: (1) locker room supervision; (2) facilities and equipment; (3) scheduling; (4) assessing skills; (5) contact spots; (6) grouping by ability; (7) leadership and staffing; and (8) disproportion in classes. For each concept, an interpretation of the law and the law's effect is presented, and recommendations are suggested for implementation. (JD)

Teacher Motivation
The Center for Excellence in Education at North-The Center for Excellence in Education at North-ern Arizona University has learned a great deal from the past 5 years of research and evaluation of 15 pilot-test school districts, as they endeavor to restructure and make positive changes. The purpose of the reform movement is to provide adequate in-centives for recruitment, retention, and motivation of high-quality professionals and to improve student learning. This extensive study has found an extreme diversity in the readiness and ability of school dis-tricts to reform and improve. The studies have identified several important factors impacting upon each organization from the outside (school boards and legislative policy) and from within (organizational climate, communication, teacher evaluation, and curriculum). These interrelated components di-rectly affect productivity and must be integrated rectly affect productivity and must be integrated and operating in a positive way to influence teacher development and student learning. Organizations that have done an assessment based on key components and redesigned operations to focus on the instructional program have improved teacher attitudes, skills, and leadership activities and dramatically increased student achievement. Those systems which have accomplished total organizational development and integration are now appropriately rewarding professionals on the basis of performance (tied to student learning), rather than solely on years of experience. A pilot program, the Professional Growth Experi-ence (PGE), was designed and implemented by teacher educators from three Wisconsin teacher education programs to improve the guidance skills of cooperating teachers during their actual supervision of student teachers. Each PGE seminar enrolls no more than 10 currently engaged cooperating teachers and meets a minimum of 10 hours a semester, with 12 hours considered a preferred option. Each participant selects a project to be completed during the course of the program. In the seminars already completed, the general project most frequently secompleted, the general project most frequently se-lected by the cooperating teachers was an individu-alized handbook for incoming student teachers outlining in detail what the cooperating teacher con-sidered the most important and helpful information for the student teacher. Descriptions are given of the focus of each of the six 2-hour seminars and of typical projects selected by the teachers. The bene-fits of the PGE program for cooperating teachers are discussed, and a brief assessment of the program is included (ID). is included. (JD)

A new teacher certification law, enacted by the Maine Legislature in 1984, included a chapter which delineated standards and procedures for creating and operating support systems for candidates seeking a higher level certificate, a transitional endorsement, and/or renewal of the master's level cerdorsement, and/or renewal of the master's level cer-tificate. This chapter requires that all teachers who wish to serve on a support team be provided with training in peer observation and assessment tech-niques. Each support team is responsible for gener-ating a "teacher action plan" which describes competencies required for the certificate. It may describe any graduate and advanced study which the support team believes necessary for the teacher applicant to receive a positive recommendation for applicant to receive a positive recommendation for certification. The plan must identify skills which need improvement and specify particular routes for improvement. This document presents a training module for teachers who wish to serve on a support team. The development of the module is described along with an evaluation of its effectiveness. The 1988 pre- and post-assessment results are included, and the assessment instruments used in evaluating the training program are attached. (JD)

Identifiers-*Accepting Behaviors for Cultural Diversity Project

Using data from pre- and postprogram question-naires and interviews, the study describes the views that a group of 17 student teachers drawn from 5 Michigan universities hold of culturally diverse Michigan universities hold of culturally diverse learners both before and after a 3-day workshop intended to influence their views. The study found that the multicultural presentations had little effect on students' beliefs-about the capabilities of learn-ers labelled "high" and "low" ability, about the use of stereotypes in making teaching decisions, or about providing genuinely equal opportunities to learn challenging and empowering subject matter. It is suggested that teacher educators may need to is suggested that teacher educators may need to rethink both the content and pedagogy of opportu-nities to learn about teaching culturally divers learn-ers. The appendixes include: (1) The ABCD (Accepting Behavior for Cultural Diversity) for Teachers Training Schedule; (2) Description of the ABCD Sample; (3) Examples of Pre- and Postpro-gram Responses to Scenario #2.

Interactive computer networks, long available to members of the scientific and business communities, now are being introduced by departments and schools of education to enhance and continue the schools of education to enhance and continue the education of teachers. Electronic networking, linking beginners with other beginners and with their former university-based teacher educators, provides a new medium of support for beginners. One such network is the Beginning Teacher Computer Network at the Harvard Graduate School of Education. This electronic network offers support and direction to novice teachers in disparate geographic locations during their first year of teaching. This study examines the following questions: (1) What is gained or lost by substituting for face-to-face interactions a system involving telephone lines and electronic system involving telephone lines and electronic equipment? and (2) What influence does the referent of multiple teaching contexts represented by the novices on the network have on the articulation of concerns and the development of strategies and so-lutions to problems? These questions form the foun-dation for a deeper understanding of the influence of electronic networking on induction support and the potential of this medium to encourage and foster reflection in beginning teachers. Identifiers—*High Fat Diet
This report provides information on the content of school lunches offered to middle school children in the public schools. A total of 163 middle schools in 42 states responded to the school lunch survey. Sur-42 states responded to the school lunch survey. Survey findings are given on: (1) the contents of the main course, vegetable and fruit offerings, desserts, and beverages; and (2) lunches actually eaten by students including those prepared outside of the school lunch program. It is concluded that from the main course to dessert, options in the school lunch program are often high in fat. Contributing to this high-fat diet is the lack of variety in school lunch menus. Recommendations are made for state and menus. Recommendations are made for state and federal action. (JD)

Training
A far-reaching reexamination of teacher education in the United States is underway, stimulated by reform initiatives from within the profession and by criticisms from without. This article raises questions how the procession are proportional properties. about the place and form of educational psychology in the larger conversation about the thoughtful preparation of teachers. Recent research and theory in cognition and instruction suggest alternatives to tra-ditional conceptions of the learner, the teacher, and classroom learning. This research has implications for the reconsideration of the content, curriculum, and methods of educational psychology and also for the ways in which teacher educators learn to teach the adults who will become tomorrow's teachers. Identifiers-Congress 101st

These hearings addressed three measures introduced to the Senate: the Excellence in Teaching Act, S. 1675; the National Teacher Act of 1989, S. 1676; and the Teacher's Professional Development Act, S. 498. The key provisions of the bills focus on:
(1) addressing the teacher shortage through a revitalized Teacher Corps Program providing scholar-ships to college and graduate students who agree to snips to college and graduate students who agree to teach for 5 years after graduation; (2) placing special emphasis on training teachers in areas of urgent need, such as math, science, bilingual education, special education, and early childhood education; (3) encouraging minority recruitment through mag-net schools, residential summer institutes for disadvantaged high school students, education programs at historically black colleges and universities, and improved coordination between two- and four-year institutions; and (4) providing inservice training through professional development academies and offering a range of incentives for teachers to con-tinue in the profession. The process by which the Educational Resou Information Center's Clearinghouse on Tests, Measurement, and Evaluation (ERIC/TM) acquires documents and the ways in which it offers them to users are discussed. Focus is on identifying how the ERIC/TM and members of the National Council on Measurement in Education (NCME) can cooperate to increase the standards and quality of professional knowledge in the educational community. Responsibilities of the ERIC/TM are to: (1) identify, acquire, and select literature within the clearinghouse scope; (2) process selected documents to maintain the ERIC database; and (3) disseminate information to policymakers, program planners, practitioners, and researchers via the database, publications, and user-information staff. Although the working relationship between the ERIC/TM and NCME has been mutually supportive, both could benefit by a greater incorporation of documents from NCME members into the ERIC/TM database. ERIC/TM members into the ERIC/TM database. ERIC/TM document processing is described. Benefits to authors of submitting their documents to the ERIC/TM include: (1) wider dissemination of knowledge; (2) free publicity; (3) quick and easy retrieval by a worldwide audience; (4) selected documents will never go "out of print"; (5) provision of a complementary microfiche of the document; and (6) ERIC acceptance does not preclude other publication. Seven figures illustrate the text. (SLD)

Worldwide educational indicators are presented in tables and graphs by region. The indicators are selected to highlight the International Literacy Year and Education for All, two programs of particular importance to the United Nations. Data are presented for the school years beginning in 1970, 1975, 1980, and select years up to 1987. The terms "first level," "second level," and "third level" correspond to elementary, secondary, and higher education, re-spectively. Selected statistics for developing and developed countries are provided for the following parameters: (1) education preceding the first level; (2) education at the first level; (3) education at the (2) education at the first level; (3) education at the second level; (4) public expenditure on education; (5) demographic and enrollment prospects in the year 2000; and (6) trends and prospects in the area year 2000; and (6) trends and prospects in the area of illiteracy. Twenty-six data tables and 17 figures are provided. Two additional tables present enrollment by level of education and percent female and selected indicators summarized by country for around 1987. mentary Education, Elementary School Students, *Elementary School Teachers, Evaluation Meth ods, Foreign Countries, National Programs, Pilot Projects, *Program Evaluation, *Teacher Role Identifiers—*England, Measurement Driven In-struction, *National Curriculum, Touchstones

The experience of an elementary school implementing the Touchstones Program-an approach to assessment within the proposed National Curricu-lum (NC) in England-is described, after which teacher reaction to the NC and fundamental beliefs about the nature of education are considered. The about the nature or education are consisted. In a Touchstone assessment consist of 10 cross-curricular group assessments for children aged 6 to 8 years. These assessments are intended to provide qualitative information on performance in English, science, and design and technology for students in the changed environment created by the NC. These assets sessments incorporate attainment targets identified by NC working groups and are considered one of a by NC working groups and are considered one of a range of approaches to assessment under the NC. The Touchstones Program uses three different as-sessments: those made by the teacher directly from observation; those devised from student-kept re-cords; and those observations that are not recorded until all the activities have been completed. The approach was tested with 2 groups comprised of 6 children between 6 and 8 years of age who explored the strengths of paper, plastic, and tin-foil under wet and dry conditions. The assessment provided teachers and administrators with an understanding of what will be involved when NC procedures are implemented, and it raised questions about the influplemented, and it raised questions about the influences that the NC will have on education, particularly assessment-driven education. Teachers in the trial interpreted the criteria for reaching levels within the attainment targets as implying changes in their teaching practice, suggesting that teaching to the targets is one probable result of the NC. A number of other concerns are discussed, including the concern being felt at the higher levels by tutors and students like that "training to become a teacher" has been replaced by "learning about the National Cur-riculum, Assessment, and Records of Achieve-ment." Identifiers—California Basic Educational Skills

Test, National Teacher Examinations

The validity of several predictors was examined against multiple criteria of student program success. Subjects (N=437) were selected from about 800 students in the elementary teacher education program of a small California state university. Predictor variables for each subject included: (1) undergraduvariables for each subject included: (1) undergradu-ate grade point average (GPA); (2) subscale scores from the California Basic Education Skills Test; (3) prerequisite education course grades; and (4) com-posite scores from the National Teacher Examination (not available for all subjects). Criterion variables included: (1) grade in the curriculum and methods course taken during the last student teaching block; (2) two student teaching performance rat-ings; (3) positive and negative comments written on student teacher rating forms; and (4) successful completion of two quarters of student teaching. Multiple regression analysis enabled the assessment of the relative importance of the factors. The reading methods course grade and GPA functioned best as predictors of the performance criteria. Scores on the standardized tests were not significantly predictive. These results suggest that academic performance may be predictive of student teacher success yet there is a need for further research. Three data tables are included. (SLD)

ology, Statistical Analysis Identifiers—Abductive Reasoning, Controversy

A debate about qualitative versus quantitative analysis has been waged in the scientific community for several years. A different set of parameters is suggested for this debate, and a logical transforma-tion is outlined that makes the qualitative/quantitative distinction at the epistemological level a non-problem. While the strategy of induction has ell-developed and frequently used, the strategy of abduction is hardly recognized. If abduction, a more metaphoric reasoning, is accepted on a par with induction and deduction, a new logic—"AID" (Abduction, Induction, Deduction)—may enrich the scope of rationality. When logical space is expanded to include abductive logic, the use of metaphor becomes legitimate in inquiry. In an inductive/deduc-tive world, the qualitative/quantitative distinction is of central importance. In an AID world, this dis-tinction would lose its force as the central underlying distinction. An appreciation for horizontal well as vertical inference would surface. It would no longer be necessary to think of paradigms strung out along a qualitative/quantitative continuum. An AID logic would establish a multi-epistemological setting for educational inquiry. A 39-item list of references is included. (SLD)

erence Patterns

erence Patterns
In 1986, the National Association of Secondary
School Principals (NASSP) published a new learning style instrument, the NASSP Learning Style
Profile (LSP). The LSP offers educators a well-validated and easy to use instrument for diagnosing the
cognitive styles, perceptual response tendencies,
and study and instructional preferences of middle
level and senior high school students. This second
of two volumes of an LSP handbook presents various ways to adant the learning environment to ous ways to adapt the learning environment to learner needs and preferences (the first volume provides activities that are useful in enhancing cognitive skills). The strategies and activities included are keyed to the perceptual, study, and instructional elements of the LSP. Definitions of each learning style element are presented, along with sample items, the research background, and the selected strategies and methods that have helped students with that element of style. The elements discussed are: (1) perceptual response; (2) persistence orienta-tion; (3) verbal risk orientation; (4) manipulative preference; (5) study time preferences; (6) grouping preference; (7) posture preference; (8) mobility preference; (9) sound preference; (10) lighting preference; and (11) temperature preference. In the fac-tor analytic studies of LSP subscales conducted by a national task force, perceptual responses loaded as a relatively independent dimension. Persistence, posture, mobility, sound, and lighting clearly loaded as study preferences. Verbal risk, grouping, manipulative, and (to a lesser extent) temperature loaded as instructional preferences. Study time cross-loaded between study and instructional preferences. An 88-item list of references grouped by learning style elements is provided. An appendix contains the LSP interpretation form. Descriptors—Comparative Analysis, *Criterion Referenced Tests, *Differences, *Educational Assessment, Knowledge Level, Mastery Tests, Minimum Competency Testing, *Norm Referenced Tests, Outcomes of Education, Test Format, Test

Items, *Test Use

Characteristics that distinguish criterion-refer-enced tests from their norm-referenced counterparts are discussed, including: the purposes that they are designed to serve; the characteristics of the types of items that they contain; and the manner in which they are developed. More specifically, the distinguishing characteristics include: reference for measurement; information obtained; homogeneity of item difficulty; standards of performance; distribution of outcomes; and item format. A critical difference is the reference for measurement. For criterion-referenced tests, the reference of measurement is the existence of the behavior of interest. The criterion-referenced test assesses whether or not the individual possesses the skill. The qualitative dis-tinction about performance is optimal for assessing specific or minimum competencies. The reference for measurement for norm-referenced tests is the distribution of outcomes in a representative norma-tive sample. The question asked is how the individual performs relative to others from the reference population. Performance standards are arbitrarily imposed on the norm-referenced measure. Normative tests are optimal when the entire range of knowledge or skill is of interest. These differe are summarized in a table. (SLD)

rractice Relationship
A seminar paper concerning the relationship between applied and basic research in the study of
educational and social inequality, and two commentaries are presented. The paper-"In Defense of
lvory-Towerism: Confessions of an Unreconstructed Basic Researcher," by Karl L. Alexander, the seminar's main speaker, presents the point of view of a sociologist of education whose major focus is educational stratification. It reviews the b search findings of issues of educational and social inequalities, within a discussion of the possible con-tributions of basic research to the solution of educational problems. Areas addressed in the research review include the Blau-Duncan "basic model," the Wisconsin School Process Model, studies of gender and racial disparities, the social-psychology of the schooling process, school organization and climate, and family factors. It is concluded that fundamental research can help to locate the role of the school in research can nelp to locate the role of the school in the larger social system, suggest strategies for im-provements within the school environment, and combine an inward and outward approach to shed light on the interdependence of school and society. The commentaries include: "Comments from An-other 'Ivory Tower" (Philip J. Foster), and "Ap-plied and Pagis Describ in the Societion." plied and Basic Research in the Sociology of Education: Comments on Karl Alexander's "In Defense of Ivory Towerism"" (W. Paul Vogt). (TJH)

Issues that must be addressed in designing procedures for aggregating portfolio data are considered. These issues have profound implications for what is aggregated and how data are collected, combined, and interpreted. Portfolio assessment occurs at the quires students to collect and reflect on examples of their work, providing both an immediately their work, providing both an important instruc-tional component to the curriculum and offering an opportunity for complex authentic assessments. A opportunity for complex authentic assessments. A multidimensional, cognitive process model of assessment is recommended in this paper. The cognitive model for assessing portfolios is structured much like the program evaluation model developed by R. Stake (1967). The model is designed to be broadly descriptive, yet to provide a framework for presenting high quantitative and qualitative data in a coherent fashion. Its results are judgments taken from the perspectives of multiple parties. The model does not provide a single score; rather, it provides a comprehensive view of complex learning outcomes in a context where instruction and assess-ment are inseparable. The three-dimensions of the model are the following: (1) activity, including assessment activities intrinsic to both compiling a portfolio and aggregating across portfolios; (2) historical, including changes beginning from conditions at the outset through transactions to outcomes; and (3) stateholder, which reflects viewpoints of stakeholders with an interest in the portfolios. Three sample portfolio projects are outlined: the Pupil Product Portfolio; a writing portfolio; and a metacognitive letter. Five figures and a 65-item list of references are included. (TJH)

Writing Instruction

Identifiers—*De - Des Moines Public Schools IA, Pro-

The evaluation process and results asociated with 188-1990 reading (kindergarten through grade 12) and language arts (kindergarten through grade 5) programs of the Des Moines (lowa) Independent Community School District are presented. The evaluation is divided into four parts: context; input; process; and product. Language arts instruction in-cludes reading, listening, speaking, writing, and viewing. The context evaluation covers history of language arts and reading texts; policies, standards, and regulations; general needs; curriculum review needs; and program goals and accomplishments. The input evaluation covers expenditures, textbook costs and cycles, and student time allotments. The process evaluation covers district goals and objec-tives, the responsibility statement, inservice staff development, and inservice consultants. The prod-uct evaluation covers assessment, management, re-sponse to goals and objectives, writing checkpoint, standardized tests for elementary and middle school levels, certification, the "Reading Is Fundamental" and "Book It" programs, recommendations for the future, and objectives for 1990-1991. A curriculum review summary for 1987-1988 is appended. (TJH)

cus Group Assessment

The focus-group interview format was used to investigate the existence, interrelationship, perceived strengths, and indicators of insufficiency in the im-plementation of the Career Ladders (CL) teacher-incentive program in a rural Arizona school district. Two interviews were planned for each of the following groups: school board members; CL Steering Committee members; administrators; office staff; parents; CL teachers; and non-CL tea ers. Although these subject groups were diverse, the first set of interviews yielded some common themes: Inst set of interviews yielded some common themes:

(1) a perceived overall lack of district readiness for
the CL program; (2) the expressed need for an
agreed upon curriculum; (3) the need for teacher
effectiveness and accountability; (4) improved administrative leadership; and (5) improved organizational clients. The record set of interviews of tional climate. The second set of interviews concentrated on problem areas, and identified sev-eral areas of concern: administrative leadership; program requirements; the evaluation process; com-munication requirements; and need for long-range planning. The two sets of focus-group interviews revealed that the format is a powerful tool for the validation of theoretical models, such as this model of support and focus factors. (SLD)

Tabular procedures for analyzing open-ended responses were used to study a school district's educational reform program. Responses of a rural Arizona

tional reform program. Responses of a rural Arizona Career Ladder (CL) school district's teachers and administrators to three pairs of open-ended ques-tions contained in the 1989 Perception Assessment Scale survey comprised the data base for the present study. The survey questions asked subjects to iden-tify the perceived strengths and indicators of insufficiency of the overall CL program, and perceived strengths and weaknesses of organizational climate trict and school. There were six subsets of specific responses. Responses were clustered and substratified in a qualitative matrix form according to the respondents' CL status and years of experi-ence. Careful examination revealed several critical underlying items. Substantial teacher input and ownership were considered essential, and respondents indicated that the primary focus should be student achievement and teacher accountability. The biggest problem identified was lack of consistent application of rules. The analysis demonstrated the usefulness of structured qualitative analysis in the model validation process. Nine tables contain the cells of the qualitative data matrix and the rank-ing of the strengths and insufficiencies derived.

TX. *GENESYS

GENESYS is the GENeric Evaluation SYStem of the Office of Research and Evaluation, Austin (Texas) Independent School District. It is a method of streamlining data collection and evaluation for a variety of projects. GENESYS gathers data from the school system's data bases and reports the fol-lowing information (characteristics and outcomes) owing information (characteristics and outcomes) on specified groups of students: (1) student characteristics; (2) achievement; (3) attendance; (4) discipline; (5) grades and credits; (6) dropouts; and (7) retainees. Generally, GENESYS can be run any time after first-semester records are tallied for the current year. Computer programs using the Statisti-cal Analysis System (SAS) have been written and cal Analysis System (SÅS) have been written and linked to generate standard output on several variables for specific programs. GENESYS can be run for any group identifiable through a computer file. Most of the groups included in the first year were for students served in 1988-89; some were follow-ups of groups served in 1987-88. Overall, 25 programs and 130 subgroups at the elementary, secondary, and kindersearch through grade 12 levels. ondary, and kindergarten through grade 12 levels were run through GENESYS in the spring of 1989. Three of the school district programs-Teach and Inree of the school district programs—Teach and Reach, Kealing Magnet Program, and Liberal Arts Academy—are described in this paper as examples of reports generated by GENESYS. Nine figures detail GENESYS groups and illustrate the three programs evaluated. (SLD)

Classification Identifiers—Cross Classification Approaches,

*Goodman Multiplicative Association Models,

*Goodman Multiplicative Association Models, Suicide Probability Scale Methods proposed by L. A. Goodman (1987) for analyzing intrinsic properties of cross-classified nominal or ordered categorical variables were used to examine the performance of items measuring psychological adjustment (PA). These methods were applied to 35 3x4 tables cross-classifying 1,158 persons according to their mental health status (MHS) and responses to 35 Likert-type items measuring PA. The subjects included: 562 normal individuals; 336 persons who had recently attempted suicide; 336 persons who had recently attempted suicide; and 260 psychiatric inpatients. Items in this study

were drawn from the Suicide Probability Scale. Two sets of orthogonal metric scores were derived for categories of MHS and PA variables. Scores in the first set-representing the direction of MHS and PA-were used to assign scale values to categories of the variables, making it possible to examine the consistency between intrinsic and a priori orderings The second set of scores, representing the strength or intensity of the variables, formed J- or U-shaped or mensity of the variances, formed J-0 u-snaped curves when mapped onto the first set. These curves were used to distinguish positive and negative PA and MHS categories. For all tables, the intrinsic ordering of MHS categories was consistent with their a priori ordering; this finding was true for only 23 of 35 tables for PA. The location of the zero point in the categories are the categories and the categories. indicated that categories representing positive PA varied depending on the content of the item, with some patterns evident across items of similar con-tent. Two tables and 14 graphs are included. (SLD)

Identifiers-Intraclass Correlation

Several issues relating to agreement estimates for different types of data from performance evaluations are considered. New indices of agreement are presented for ordinal level items and for summative scores produced by nominal or ordinal level items. Two sets of empirical data illustrate the performance of the two formulas derived to estimate agreement. Three different agreement estimates, one at the item level and two at the score level, were computed for 2- and 5-point scalings and were com-pared using data from two human sciences studies: pared using data from two human sciences studies:
(1) ratings of speech production quality of an English-language consonant pair by 29 Japanese students; and (2) ratings of the quality of published research by 100 judges. In Study 1, each of the subjects was rated on a 5-point, 30-item scale by 4 raters. In Study 2, the judges rated the quality of 50 different research articles on a 5-point, 33-item scale. Intraclass Correlation Coefficient estimates of reliability were computed for each score. Peauli reliability were computed for each score. Results show that the first formula appeared best for total scores based on a 2-point scale, while for scales with a greater number of scale points, the second formula produced a more conservative estimate of agreement. It is concluded that different situations call for different estimates of consistency. Researchers must determine what score level is of interest prior to conducting agreement/reliability estimates. multi-point scales, researchers must make sure that the technique used to compute agreement is appro-priate for the logic inherent to the rating technique used. Six tables present data from the two studies. (SLD)

Identifiers—Center Interactive Technology Applications Res, Objective Analysis, University of

South Florida

The Center for Interactive Technology, Applicaticas, and Research at the College of Engineering of

the University of South Florida (Tampa) has developed objective and descriptive evaluation models to assist in determining the educational potential of computer and video courseware. The computerbased courseware evaluation model and the video-based courseware evaluation model provide information on over 300 items, 150 of which pertain directly to instruction (e.g., defining objectives, in-structor skills, lesson characteristics, questioning and tutorial techniques, learner interactions, re-source scope, and content assessment). Descriptive data were obtained in one of three manners: (1) a yes/no indication of whether or not a characteristic is found; (2) a 4-point ranking indicating the neces-sity of a characteristic to use the package effec-tively; and (3) a 4-point Likert-type scale revealing the extent to which a given characteristic is used by the courseware. Content validity was investigated by four experts evaluating 10 computer-assisted learning packages and five experts evaluating seven video-based packages. Reliability was investigated as each evaluator produced synthesized quality rat-ings for each course. Results suggest that both models provide fairly close agreement estimates and fairly reliable evaluations. An overview of 213 computer-assisted learning packages and 248 video-based training packages indicated that many devel-opers have failed to take advantage of their inherent capabilities, with particular shortcomings in: management system capacities; the instructor's control of lessons; and the student's flexibility in moving through lessons. Nine figures and two tables contain study data. (SLD)

Identifiers-Computer Anxiety

Identifiers—Computer Anxiety
Patterns of occurrence and type of computer use, major, gender, and computer anxiety were analyzed for teacher education students. Over a 4-year period beginning in the fall semester of 1986, 914 teacher education students provided data for this study while they were enrolled in a mandatory computer awareness module. All of the subjects were education majors with the following concentrations: English; science; social studies; elementary education; glish; science; social studies; elementary education; mathematics; special education; and physical education. In addition to providing data for the study, the students responded to a computer anxiety instruent-a modified version of Spielberger's Self-Evaluation Questionnaire. Males (n=277) had significantly lower levels of computer anxiety than did females (n=637). Almost half of the students had no previous computer experience, and many were highly apprehensive toward computers. Mathematics education and science education majors were significantly less anxious toward computers. were significantly less anxious toward computers than were students with other majors. Students in all seven majors had very little experience in running content-area software. Across the 4 years studied, there was a lower percentage of no prior computer experience and a higher percentage of previous use of content area software and word processing, spread sheet, or data base software. Three implications for teacher education are highlighted: (1) course designers should recognize that many students have no prior experience with computers; (2) practical uses of content area software and manage-rial types of software should be the focus for areas other than mathematics education; and (3) computer instruction should be driven by the student's major. Four tables contain study data. (SLD)

Testing 1-2-3 is a general purpose testing system developed at the Computer-Based Education Research Laboratory at the University of Illinois for use on NovaNET computer-based education systems. The testing system can be used for: short, teacher-made quizzes, individualized examinations, computer managed instruction curriculum testing, standardized tests, certification tests, and practice examinations. This system currently supports four test item types: multiple choice, multiple selection, short answer, and numeric. Options for result reporting include overall pass/fail scores, individual criteria for up to 26 subscores, and storage and view-ing of a student's complete test history. Testing 1-2-3 is structured around several lists of compo-nent parts in a single file. Each test is created by parts my a single learn test is created by specifying which parts will be combined to create a particular test. This guide discusses the following topics: (1) getting started; (2) creating test items; (3) topics: (1) getting started; (2) creating test items; (3) the text mode; (4) the graphics mode; (5) the locate mode; (6) editing displays; (7) shared graphic resources; (8) making section pages; (9) gathering items into tests; (10) customizing tests; (11) testing under the SYS 4 Management System; and (12) assigning tests to students. Sample computer visual displays are illustrated in 22 figures. (SLD)

 *Attribution Theory, *Causal Models, *Courses,
 Females, Grade 9, *High School Freshmen, High
 Schools, Locus of Control, Outcomes of Education, Performance Factors, Questionnaires, *Student Attitudes

Identifiers-Effort, Luck, Open Ended Questions Causal attribution has been found to have a great effect on future performance. Causal attributions were studied across two academic subjects and two were studied across two academic subjects and two outcomes using an open-ended measure. All 180 ninth-graders in a girls' high school in the Bay Area of San Francisco (California) stated their best and worst subjects and provided their perceived causes for doing well or poorly in each subject. A simple questionnaire with six incomplete sentences was administered to the students. A total of 149 students returned the questionnaire. Causal attributions were then analyzed in terms of factors and dimensions. then analyzed in terms of ractors and dimensions. Effort was the most frequently mentioned factor for performance. Ability was the second most fre-quently named factor, followed by interest, task, and teacher. Although less than 12 students cited luck as a causal factor, all but one student indicated that luck was the reason for good performance in their worst subject. In general, the students attributed performance more to internal factors (effort, ability, and interest) than to external factors (task, ability, and interest) than to external factors (task, teacher, and luck). The findings differ from previous research; the results show a different attribution pat-tern for success and failure if subject areas are distin-guished. One table summarizes the frequencies of causal attributions. (SLD)

Project OASES

This study evaluates a 1-year, pre-vocational in-tervention-Project OASES (Occupational and Acatervention-Project OASES (Occupational and Academic Skills for the Employment of Students)-for at-risk middle school students in the Pittsburgh (Pernsylvania) Public School District. The study sample consisted of 502 former participants and 148 active participants (1988-1989 school year) plus control groups of at-risk peers (n=157). The Piers-Harris Children's Self-Concept Scale and the Multi-Dimensional Measure of Children's Perception of Control were administered to active participants. tion of Control were administered to active participants during May of 1989. Classroom grades, attendance rates, enrollment status, and results of California Achievement Test administration during the spring of 1989 were compiled. Participants' and non-participants' dropout rates were comparable, as were self-concept scores and achievement test scores in reading and mathematics. Participants' scores in reading and mathematics and absenteeism declined during the succeeding year. Participants exhibited a lower project-participation-year retention rate than did their control group peers and a lower ninth-grade retention rate as well. Non-participants, which we have decreased in termility in the control group the state of the participants are within the decrease of internality in ticipants exhibited higher degrees of internality in cognitive and social domains than did participants. Results indicate that project participants may not be well served. Recommendations include interdisciplinary planning, use of chronological age rather than grade level as a selection criterion, and de-emphasis of vocational goals in favor of vocational education as academic intervention. Three data tables and three figures are included. (Author/TJH)

Relationship
Identifiers—Paper and Pencil Tests, *Personal Profile System, Self Scoring Tests
The Personal Profile System (PPS) is a psychological testing instrument that has been widely used.
The construct validity of the PPS was studied The construct validity of the PPS was studied through a review of the literature. This paper organizes the literature review into three broad categories: the background of the PPS; the reliability of the PPS. The PPS is a self-scoring instrument measuring the behavioral responses of people along four dimensions: (1) dominance; (2) influencing; (3) steadiness; and (4) compliance. The instrument is designed to provide a systematic and comprehensive percention of an a systematic and comprehensive perception of an individual's behavioral tendencies and the behavioral tendencies of those with whom the individual comes in contact. Claiming construct validity for an instrument implies evidence that the instrument measures the construct or trait. This review of em-pirical literature on the PPS found little data conpirical interature on the PPS found fittie data con-cerning its reliability. Several studies offer support of its criterion-related validity. Studies on construct validity were reviewed but provide inconsistent re-sults. None were based on factor analysis which could provide credibility for the instrument. Principal components analysis, followed by orthogonal and oblique rotation, is recommended to affirm the number of common dimensions of the PPS. Four tables, 1 figure, and a 37-item list of references are provided. (SLD)

Carolina, North Carolina Science Tests, North Carolina Social Studies Tests, Percentile Ranks The North Carolina Annual Testing Program, established by the 1977 General Assembly to assess the effectiveness of the educational process in North Carolina, involves the administration of a battery of norm-referenced tests to students in grades 3, 6, and 8 to measure skills in reading, language, mathematics, science, and social studies. This paper reports performance results from administration of the California Achievement Tests Into paper reports performance results from administration of the California Achievement Tests (CAT) to public school students in the spring semesters of 1986 through 1990; and administration of the North Carolina Science and Social Studies Test (NCSST) to public school students in the spring semesters of 1988 and 1990. In the spring of 1990, North Carolina Science and Social Studies Test (NCSST) to public school students in the spring semesters of 1988 and 1990. In the spring of 1990, North Carolina students scored above the national norm group in all CAT subject areas in the three grades tested, with performance higher in mathematics and language than in reading. Between the spring semesters of 1986 and 1990, the average student improved performance in all measured areas. Between the spring semesters of 1988 and 1990, the performance of the typical student in the three grades was maintained or improved in all areas mea-sured by the NCSST. Eighteen graphs illustrate state frequency distributions for the CAT and NCSST. Test results are summarized in 32 tables. NCSS1. Test results are summarized in 32 tables. Five appendices include: (1) state summary reports from the CAT (21 pages of tables); (2) regional CAT summary reports (36 pages of tables); (3) regional NCST and NCSST summaries (48 pages of tables); (4) "Selecting a Measure of Central Tendency Comparison of the Mean and Median"; and (5) definitions of measurement terms used in the report.

This eleventh annual edition contains a concise presentation of statistics about Connecticut's educa tional system collected from major State and Fedtional system collected from major State and rec-eral sources arranged according to each town and school district. State totals are given for the follow-ing areas: (1) community data; (2) district students; (3) early childhood education programs; (4) mastery test results for fall 1988; (5) staff data; (6) revenue data; (7) selected State grants; (8) education equalization data for 1985-86; (9) aid and expenditure data; (10) selected state and Federal grants; and (11) expenditure data. The same type of information is provided for 149 towns that operate school districts and for the 17 regional school districts. Community data, education equalization data, and aid and ex-penditure data are given for 20 towns that do not operate school districts and that are part of regional

school districts. The following information is pro-vided for three endowed and incorporated acade-mies: school data; district students; and early childhood education programs. Definitions and sources of data are listed. (SLD)

Identifiers—*North Carolina Competency Tests
Adults in four North Carolina counties were surveyed to determine public attitudes about the high
school minimum competency test (MCT) that determines which students receive a diploma. The interview form consisted of 18 questions with 5-point
Likert response scale. Four additional questions requested specific responses. Interviewers were seven
educators from the community who received trainins before. educators from the community who received training before collecting the data. They randomly selected homes and interviewed one adult occupant in each. The 150 subjects were predominantly female (n=105) and 95 had children under 18 years of age. (n=105) and 95 had children under 18 years of age. The respondents were generally supportive of the MCT, but lacked a clear understanding of its pur-pose. Overall, the respondents believed that the competency examination was achieving its per-ceived purpose of enhancing academic achievement and providing incentive for improved performance. The public also supported the use of remedial pro-grams for students who fail the test. Seventy percent of the respondents thought that the mentally reof the respondents thought that the mentally re-tarded and learning disabled should not have to meet the same requirements as non-handicapped students. The respondents believed that the MCT and the Tests of General Educational Development similar. Respondents also believed that the MCT covered the entire high school curriculum; they did not understand it as requiring only the mastery of basic skills needed to function at a mini-mum level in society. Three tables present survey

Reliability

dentifiers—Internal Validity, Music Ability, *Pitch (Music), Pitch Discrimination Test Worksample 740 A Identifiers

As a measure of musical aptitude, a new 90-item Pitch Discrimination Test was developed, and its internal structure was examined. Each of the three sections of the test measures an individual's aptitude for pitch discrimination in a different frequency range using square-wave tones generated by a per-sonal computer. A total of 1,303 examinees, mostly sonal computer. A total of 1,303 examinees, mostly clients taking aptitude tests for career guidance, completed the new worksample 740 A and the current version 315 F. The analyses reported were conducted with a minimum of 1,270 examinees; the exact number of cases for any given analysis varied slightly as a function of missing values on some variables. Representation of both sexes was nearly constant the median exer of recognizes were 26 equal, and the median age of examinees was 26 years. The internal structure of Worksample 740 A years. The internal structure of Worksample 740 A was assessed using several methods: (1) comparisons with Worksample 315 F; (2) reliability analysis; (3) factor analysis; (4) item fit analysis; and (5) item difficulty analysis. Obtained reliability coefficients for Worksample 740 A were higher than those of Worksample 315 F. With a few exceptions, all items contributed to the test's reliability. Factor analysis indicated that all sections measured the same underlying construct. Analysis of age and sex indicated that age, but not sex, requires careful con-sideration in construction of norms for the new test. The new instrument allows the Johnson O'Connor Research Foundation to provide examinees with a more generalizable assess nent of their aptitudes for pitch discrimination. (SLD)

Three articles on current research in testing are presented. The first article, "Testing in the Schools", discusses the role of testing in educational reform. In the 1980s, the overwhelming purpose of state standardized testing has become promoting accountability in areas of: (1) monitoring; (2) gate-keeping; (3) remediation; and (4) funds distribution. Educational policy makers need to find some way to evaluate the tests. Some guideposts for evaluating testing are suggested: making sure that instructional outcomes and learning outcomes guide the testing; determining how a test protects against bias in race, gender, or ethnicity; making sure that appropriate techniques are used; and making testing for accountability less obtrusive. The second article, "Constructed Response Testing; Some Development Efforts", examines two approaches focusing on student developed columns to the construction. on student-developed solutions to questions that can be economically scored. The first approach involves the use of an answer grid to record answers to mathematical questions, and the second approach involves the use of figural response items for science testing. The third article, "Assessing Performance", describes some of the work conducted at the Educational Testing Service (ETS) and in Connecticut in the area of student performance assessment. The "Learning by Doing" project of the National Assessment of Educational Progress is de-National Assessment of Educational Projects is de-scribed. Also discussed are: a writing portfolio study; the Arts PROPEL program in Pittsburgh (Pennsylvania); and Connecticut's Common Core of Learning Assessment Project. Four figures illus-trate the discussions. (SLD)

Overviews of the process of historical research overviews of the process of historical research and the writing of a successful historical essay or dissertation are presented. Historical research is de-fined as the systematic process of collecting and objectively evaluating data related to past occur-rences to arrive at conclusions about the causes, effects, or trends of past events that may be helpful in explaining the present or anticipating the future. It is suggested that the historical research process consists of six steps: (1) selecting a suitable topic; (2) searching for evidence; (3) evaluating the evidence; searching for evidence; (3) evaluating the evidence; (4) taking notes; (5) arranging the information into a meaningful pattern; and (6) presenting results in a way that provides the reader with a full understanding of the subject. Sources of information are discussed as well as the criteria of internal and external criticism that should be used to evaluate the research effort. Effective ways of taking notes and arranging information, the rules of citation, and the importance of form are described. Literary style and ways of constructing a truthful and readable dissertation are also considered. (SLD)

The NAEP Proficiency Scales: Do They Yield Valid Criterion-Referenced Interpretations? Iowa Testing Programs Occasional Papers Number 35, May 1990.

Iowa Testing Programs, Iowa City. Pub Date—May 90

lowa resum robams, on the probability of the probab eas from grade 3 (age 9 years) through grade 11 (age 17 years). The numerical values for NAEP scales are intended to be interpreted almost exclusively from a criterion-referenced perspective. The NAEP intends to accomplish the goal of making criterion-referenced interpretations of examinee scores through the use of item response theory methodology. The basis for classifying an item at a profi-ciency level is the estimated probability of success of examinees at different proficiency levels. The implications for criterion-referenced interpretations are discussed in the context of the Science Proficiency Scale (SPS). Problems with interpreting SPS results are due to the following factors: (1) the science domain is not well defined; (2) it is doubtful that learning in this domain proceeds through an orderly sequence; (3) the number of test items that could be developed is virtually unlimited; and (4) many problems are generated by the interactions between the examiners, and item between the examinee's past experiences and item content. The NAEP mathematics, reading, and his-tory scales are also reviewed. It is suggested that the NAEP proficiency scales do not yield valid criterion-referenced interpretations. Four figures illustrate the discussion. A 27-item list of references is included. (SLD)

Identifiers—*Error Analysis (Statistics), Integrated Postsecondary Education Data System, *Less Then Two Year Postsecondary Institutions

Then Two Year Postsecondary Institutions
The Integrated Postsecondary Education Data
System (IPEDS) of the National Center for Education Statistics collects data from all sections of postsecondary education. For less-than-two-year institutions, the IPEDS collects data on fall enrollment, completions (earned awards and certificates). etc., from all public institutions in that category and from a sample of private institutions. The method-ological issues that arise from trying to collect data from less-than-two-year postsecondary education institutions are discussed. The variable nature of the universe of these institutions, which go in and out of business frequently, contributes to errors in IPEDS estimates. The IPEDS sectors discussed are: (1) less-than-two-year public institutions; (2) less than-two-year private non-profit institutions; and (3) less-than-two-year private for-profit institutions. Sampling errors were computed by balanced re-peated replication based on 32 replications. Data are provided for 330,007 male and 425,835 female students attending the sample institutions in the fall of 1987 and for 311,561 male and 378,267 female students who graduated from the sample institu-tions in 1987-88. Challenging problems are pres-ented to IPEDS statisticians because of: reluctance of the institutions to respond to the survey; the vola-tile nature of the population; the highly skewed dis-tribution of the sizes of the institutions; and the sensitivity of the data to precise definitions. and extracurricular experiences (from preschool through high school) to the reading achievement of through high school) to the reading achievement of high school seniors. Variables representing each of these factors were measured using "The Reading Biographer," an instrument that had been evaluated in a national follow-up study of 3,959 high school seniors. Data from a sample of 2,177 of these students were placed in three categories, i.e., higher, moderate, or low involvement on each of nine variables representing home, school, or extracurricular activities at preschool, elementary school, or high school levels. Mean reading scores were computed for each of the involvement levels of all nine factor variables, and an analysis of variance identified vari-ables that yielded significant differences. Regression equations for various subgroups of interest were used to validate the model across social class and gender subgroups. Results reveal that common factors were important for all subgroups in acquiring adult reading skills. An unexpected result was that early childhood experiences were important in pre-dicting adult reading status. Three tables and two figures summarize study data. (Author/SLD)

Descriptors— *Computer Oriented Programs, Com-puter Software Development, Computer Uses in Education, Evaluation Methods, Expert Systems, Researchers, *Research Methodology, *Statistical Analysis
Identifiers—*End User Statistical Computing

End-user statistical computing is one way to im-prove the productivity of researchers; it does so by providing them with a statistical computing envi-ronment and with guidance on its appropriate use. Critical success factors include: (1) ease of use; (2) software correctness and robustness; (3) compatibilsoftware correctness and robustness; (3) compatibility with system resources; (4) training and education; (5) short-term and long-term consultation; and (6) management sponsorship. Researchers need to know how to use a statistical method; they do not need detailed knowledge of a statistical method's underlying mathematics. With appropriate guidance and contact, researchers can directly control the execution of a statistical method in an appropriate manner. The social payoff is that more scientists, engineers, and technicians can design and analyze experiments with shorter turnaround times than without end-user statistical computing. Future directions involve expert system components of the user interface and incorporation of computer-intensive methods. A 59-item list of references is provided. (SLD)

The use of computer graphics as visual aids to

The use of computer graphics as visual aids to lecture-style university instruction is discussed briefly. It is contended that the following three factors inhibit the application of computers as visual aids: (1) the costs of providing sufficient numbers of monitors and large enough monitors to allow appro-priate visual access by students are relatively high; (2) most software is designed for individualized, lab-oratory-style instruction as opposed to lecture hall instruction; and (3) teachers have negative attitudes toward the use of computers in the lecture hall. In spite of these problems: toward the use of computers in the lecture hall. In spite of these problems, implementation of comput-ers in lecture halls is likely to continue. Three origi-nal graphics screens developed for statistics lectures are cited. (TJH)

Promotion, outreach, and data production efforts related to the 1990 decennial census conducted by the U.S. Department of Commerce are discussed. Promotional efforts, which particularly targeted minority groups, included multilingual mass media advertisements, public service announcements, press releases, school and church components, and telephone campaigns. The Statistical Standards and Methodology Section of the Census Bureau ar-ranged most of the studies of the effectiveness of the census promotion efforts and a quick examination of the mail return rates from the census indicate that these efforts appear to be successful. A study by a company called Vitt Media (chosen by the Advertising Council) came to the same conclusion. A review of the Redistricting Data Program, designed to produce timely data products, indicated that an early and aggressive outreach to legislative leaders and other stakeholders was also successful. In sum, preliminary findings indicate that the innovative, state-of-the-art techniques used by the census promoters were effective. (TJH)

The development of information for adjustment of the 1990 decennial census conducted by the U.S. Department of Commerce is discussed. Policy guidelines for the adjustment decision, which have been the subject of litigation, as well as technical operational plans are outlined. These plans include projects to evaluate the matching process, the effects of missing data, the sensitivities of any proposed adjustment to statistical assumptions, and the quality of small area data. Associated methods of demographic analysis are discussed briefly, as is the role of the Undercount Research Steering Committee. (TJH)

*Testing Programs
Identifiers—BICAL Computer Program, *Maryland Functional Testing Program, *Rasch Model
The Maryland Functional Testing Program
(MFTP) uses the Rasch model as the statistical
framework for the analysis of test items and scores. This paper is designed to assist the reader in developing an understanding of the fit statistics in the Rasch model. Background materials on application of the Rasch model in statistical analysis of the MFTP are provided, studies of item fit and causes isfit are outlined, and recommendations of item m for uses of fit statistics are made. It is recommended that: (1) since the number of items detected as "misfitting" is a matter of choice in selecting the fit statistic from a wide range of fit statistics produced by BICAL, and since there are no sound statistical procedures for selecting items on the basis of fit indices; test of item fit should not be used with some andices; test of item it should not be used with some arbitrary critical value to make automatic decision for eliminating them; (2) items that have total or between "t" values larger than 2.00 should be investigated for flaws in the construction of the item, unusual item content, "order effects" resulting from its position in the test, and level of difficulty; (3) if an easy item does not fit the model because it occurs near the end of the test which low ability students may not reach time for the test might be extended; (4) guessing is inherent in the use of multiple-choice items and such items should not be deleted for this reason; and (5) items flagged by various tests of fit should be studied by subject matter experts to gensnound of studied by subject matter experts to generate possible hypotheses about the reason for mis-fitting items. Fit statistics produced by BICAL-1980 are described, with emphasis on the sample size ef-fect on fit indices, and computation of these statistics are explained. One data table is included. (TJH)

Rasch Model

Use of item response theory (IRT), the delta plot nethod, and Mantel-Haenszel techniques to assess differential item functioning (DIF) across racial and gender groups associated with the Maryland Test of Citizenship Skills (MTCS) is described. The objective of this research was to determine the: effect of sample size on results from these three DIF techsample size on relationship among these DIF sta-tistics; and degree to which they identify the same items as biased. The data for the study include item responses from one form of the 1988 edition of the MTCS. The MTCS consists of 45 multiple-choice items that sases students' knowledge and skills in 3 domains: constitutional government; politics and political behavior; and principles, rights, and responsibilities. The MTCS was administered to 50,000 ninth graders during January and February of 1988. The analyses were performed on representative samples of 1,000, 750, 500, and 200 first-time test takers. It is concluded that no MTCS items are functioning differentially in either black/white or male/female comparisons. Plots of item difficulty estimates for black/white and male/female compar isons show nearly perfect linear relationships in both groups. Agreement, as indicated by rank order correlations across DIF techniques, is very high be-tween Rasch and Delta Plot DIF indices for all sample sizes in both black/white and male/female comparisons. In terms of agreement regarding bi-ased and unbiased items, agreement with the three-parameter DIF index is highest for the Delta Plot and Rasch techniques. A 30-item list of refer-ences, 19 data tables, and 30 figures are included. (TJH)

This manual describes the Mathematics Assess-ment Questionnaire (MAQ) and its development, provides relevant background from the research lit-erature, describes approaches to the reporting and uses of the MAQ (including its use in instructional planning), and presents sample responses from stu-dents and classes. The MAQ provides teachers and students with a tool to understand aspects of con-structing knowledge in mathematics classrooms for grades 7 through 9. The questionnaire is intended to grades 7 through 9. The questionnaire is intended to survey students' thoughts and feelings about learn-ing a particular aspect of mathematics-solving mathematical word problems. The MAQ provides additional, complementary information to that pro-vided by teacher assessments or standardized tests of mathematical concepts and procedures. The MAQ contains 162 statements and can be completed by most students within 40 minutes. In the first of 2 sections of the questionnaire, students

solve a non-routine word problem and respond to 20 statements about what they did while solving the problem. In the second section, students respond to statements grouped within three activity settings (participating in the class as a whole, working with other students, and doing homework) after which other students, and doing homework), after which the students' cognitive processes within each of these settings are again assessed, and affective be-liefs, motivation, and attributions are studied. Three liets, motivation, and attributions are studied. Three data tables and 10 figures are included. Appendices include sample responses for the fall 1988 sample; preliminary results of teacher ratings of items; statement numbers, scale response numbers for indicators, and interpretation of diagnostic indicators for beliefs, motivations, and attribution categories; the questionnaire; and the hand tally form. "Theories "Multiple Intelligences
The background and major claims of a new approach to the conceptualization and assessment of human intelligence are presented. The theory of multiple intelligences (MI), proposed in 1983 by H. Gardner, suggests the existence of several relatively autonomous human intelligences. Intelligence is defined as the capacity to solve problems or to fashion nned as the capacity to solve proteins for to tashion products that are valued in one or more cultural settings. A provisional list includes seven intelligences: (1) logical-mathematical; (2) linguistic; (3) musical; (4) spatial; (5) bodily-kinesthetic; (6) interpersonal; and (7) intrapersonal. In MI theory, inteligences are always conceptualized and assessed in terms of their cultural manifestation in specific doctors. mains of endeavor and with reference to particular adult end-states. Some projects developing out of MI theory, including Pittsburgh's Arts PROPEL program, are summarized; and preliminary findings are reviewed from Project Spectrum, a program that has developed several curriculum activities and as-sessment options suited to the child-centered strucsessment options suited to the child-centered struc-cture of many schools and preschools. The 15 activities of Project Spectrum tap particular intelli-gences or sets of intelligences. Preliminary findings provide some support for the MI theory in that chil-dren aged 3 to 7 years exhibit distinct profiles of relative intellectual strengths and weaknesses. Ar-eas for further research are described. A 53-item list of references is included. (SLD)

This paper describes recent research on the topi of assessment that has been conducted at Project Zero at the Harvard Graduate School of Education. It is argued that assessment built around an interesting and challenging project that explores a particu-lar domain (such as music, writing, drawing, mathematics, science, or programming) offers an important alternative to traditional standardized important atternative to traditional standardized tests. Such assessment instruments are known as "domain projects." This view of assessment is based on the theory of multiple intelligences which claims that human beings have evolved at least seven forms of knowing or processing information. These intelli-gences are structurally independent, but function in

concert. An assessment must elicit use of the materials of a given domain and mobilize a number of different intelligences. The Arts PROPEL Project in the Pittsburgh schools uses student portfolios and domain projects to assess artistic development in secondary school students. The Catalyst Project, an investigation of how children and adults learn with microcomputers, is another effort developing domain project assessments. The Catalyst Project il-lustrates ways in which assessment can move beyond tests, measurement, and large-group comparisons to assessments that capture aspects of student performance that may otherwise overlooked. Identifiers—"New Teachers, "Recent College
Graduates Study 1987
This report on the supply of newly qualified teachers (NQTs) is based primarily on data from the Recent College Graduate Study of 1987. The survey, which was originally designed to provide information on NQTs along was arounded to convergence. which was originally designed to provide informa-tion on NQTs alone, was expanded to cover gradu-ates in all major fields of study; however, it continues to emphasize graduates qualified to teach at the elementary school or secondary school level. For the 1987 study, newly qualified teachers were defined as: individuals who received a bachelor's or master's degree between July 1, 1985 and June 30, 1986; who became eligible or certified to teach during that same period; and who had not been em-ployed as teachers before receiving their degree. The number of NQTs who graduated from the nation's colleges and universities increased from 105,000 in 1984 to 126,000 in 1986 after declining for almost 10 years. The number of NQTs at the master's level increased by 124%, from 6,300 in 1984 to 14,100 in 1986. Nearly 73% of the NQTs at the bachelor's level in 1986 were women. An average of 48% of all other bachelor's degree recipients were women. Forty-eight percent of NQTs re-ported grade point averages of 3.25 or higher, compared to 42% of other bachelor's degree recipiported grade point averages of 3.25 or higher, compared to 42% of other bachelor's degree recipients. Fifty-seven percent of the NQTs in 1986 majored in education, a large drop from 1984 when 71% majored in education. Eighty-nine percent of the NQTs were employed 1 year after graduating from college. Only 3% were unemployed, and 8% were not working and not seeking employment. Only 61% of the NQTs in 1986 were teaching in April 1987. Seventy-four percent of the NQTs were certified in the field they were teaching. The average annual salary for NQTs who were employed full time was \$16,000 in 1987, compared to an average of \$20,700 for other bachelor's degree graduates. Ten tables and 3 graphs present study data. Appendix A contains technical notes for the survey, Appendices B and C provide, respectively, nine tables containing standard errors for data categories and two additional tables on teacher characteristics, and Appendix D presents the 1987 survey instrument. Teacher Candidates
The Phase I induction training received by provisional teachers from their local school districts and the student teaching experience of Trenton State College students were studied. Under the New Jer sey Provisional Teacher Program, the professional education of the alternate route provisional teachers is provided by the local school district and the State Department of Education. This study focused on Department of Education. This study focused on the initial 20-day seminar and practicum training program conducted by the local school districts. Data were obtained from a survey consisting of adily log of 10 categories of activity kept by the teacher candidates. The data were gathered for alternate route teachers in September, October, and November of 1989, and for student teachers in January and February of 1990. Of the 151 people seeking alternate certification, 73 returned completed daily logs. A second survey administered to 134 daily logs. A second survey administered to 134 provisional teachers established that 63 had no prior teaching experience. The data indicated that the provisional teachers were not receiving the training provisional teachers were not receiving ne training required by the state. Supervision was not as complete as had been mandated, and provisional teachers began to teach without the anticipated gradual assumption of duties. When data on program implementation were compared with data on traditional student teaching, it was evident that the districts did to the state of provide support and training for traditional student teachers (n=53), but that they did not provide equivalent support and training for provisional teachers in the alternate certification program. Eight data tables and a 48-item list of references are included. Appendix A contains the weekly log in-structions and the survey instrument. (SLD)

Identifiers—*Media Literacy, Teacher Surveys
A mail survey of 790 parochial school teachers and 350 public elementary school teachers in San Francisco (California) and two adjacent counties Francisco (California) and two adjacent counties was conducted in the 1987-88 school year to ascertain the teachers': perceptions of media use by students; use of media in the classroom; and educational goals for their students with regard to media. A total of 373 questionnaires was returned for a response rate of 33%. Among the respondents, 198 were considered media active and 175 were counted as "less active". The respondents generally had 5 or fewer years of teaching experience; they were less experienced and generally younger than the average teacher in their school systems. Teachers rated television as the medium most used by students, followed at a great distance by video/comstudents, followed at a great distance by video/computer games, movies, and radio. Teachers were most likely to use personal computers as media in the oom. Over two-thirds of the teachers considreaches students spent too much time using media. Teachers generally considered students quite competent in the operation of most consumer-oriented media equipment, but considerably less than competent in media understanding skills. About two-thirds of teachers reported teaching about me-dia as part of another subject. Between 25% and 33% of the respondents had discussed the role of media

in society or the role of advertising with their stu-dents. Most of the teachers (86.6%) would have liked to teach about the media more often, but barriers included lack of time and lack of materials. The results highlight the need for more and improved media education materials. Survey results are presented in 21 tables. The survey instrument is included. (SLD)

Identifiers—Statistical Packages
The advisability of drafting guidelines for evaluating statistical software is considered. The Committee on Applied and Theoretical Statistics of the National Research Council has decided to initiate a project to articulate insure relating to suidelines and the control of the statistics of the National Research Council has decided to initiate and the statistics of the National Research Council has decided to initiate and the statistics of the National Research Council has decided to initiate and the National Research Council has decided to initiate project to articulate issues relating to guidelines and to determine their priorities. Because there has been a proliferation in statistical software, more statistical work is being done by people with little or no training in statistics, a fact that makes guidelines increasingly important. Benefits of the proposed guidelines for users, consumers, producers, and the scientific community are considered. The aspects of statistical packages that require guidelines include: (1) coverage; (2) numerical accuracy; (3) graphics; (4) data retrieval and data manipulation; (5) data transfer; (6) documentation; (7) user interface; (8) device interfaces; (9) speed; and (10) extensibility. Guidelines have at least four important purposes: to provide a commonality to enable consumers to share knowledge; to help code existing knowledge; to raise consumer expectations; and to provide some long-term stability in a rapidly changing environment. Identifiers—*Current Population Survey
The importance of the U.S. Census as a monitor of social change in the past decade and harbinger of social change in the future is reviewed. Throughout the history of the U.S., the census has provided both the instory of the U.S., the census has provided both the data that drive the economy and the numbers for equitably apportioning political power. The census reflects the fact that changes in population concentration identify growth markets. Growth is not merely geographic; the census identifies the various comments of the expulsion and the state at which segments of the population and the rates at which they grow. Social and economic changes are foretold through changes in age distribution, the number of households in proportion to the population, and the changing composition of households. Other social changes that the census has reflected include: (1) a move from the farm to blue-collar work to white-collar work; (2) increasing literacy; (3) chang-ing spending patterns; (4) the numbers of women in the work force; and (5) income differences among the work force; and (5) income differences among population segments. It is concluded that the census will continue to offer the same types of information, and that new technology will make it possible for many more individuals and groups to use the information for decision making. Eighteen figures illustrate the discussion. (SLD)

TM 015 650 ED 324 373 Harrison, Ferrin Katti, S. K. Optimal Design in and Hazards of Linearization of Langmuir's Nonlinear Model. Pub Date—Jun 90

Nonlinear Models, Optimal Scaling
Langmuir's model is studied for the situation
where epsilon is independently and identically normally distributed. The "Y/x" versus "Y" plot had a 90% mid-range that did not contain the true curve in a vast portion of the range of "x". The "1/Y" versus "1/chi" plot had undefined expected values, and this problem worsens as sample size increases. The use of non-linear least squares is recommended. In non-linear regression, it is demonstrated that a design that gives at least a local minimum of the generalized variance of the parameter estimators is one where half the observations are taken at the maximal value of "x" (termed "x-theta") and half of the epsilons equal half their maximal value. The use of such an extreme design is optimal in simple linear regression; however, it is curious that this design is optimal in non-linear Langmuir's model. Six graphs, five data tables, and numerous equations are provided. (Author/SLD)

This teachers' guide to activities celebrating Women's History Month focuses on women whose important contributions have been omitted from history textbooks. Women's History Month grew from a 1977 celebration of Women's History Week and is intended to bring women's history into the school curriculum. International Women's Day, celebrated on March 8 of each year, provides a multicultural perspective for Women's History Month The following student activities are included: (1) "Contemporary Women in Politics and Government" comprises brief paragraphs focusing on the contributions of 15 women, and suggestions for stu-dent activities; (2) "Women Around the World: Matching Activity" challenges students to match the names of 11 internationally known women with their contributions; (3) "Scramble Puzzle" requires students to identify a list of 20 names and terms from women's history; (4) "Women's History Quiz" comprises a nine-item fill-in-the-blank quiz; and (5) "Women's History Month Match" comprises instructions for designing an activity that requires matching the names of famous women with their achievements. Teachers' answer sheets are included with the matching activity, the puzzle, and the history quiz. A list of seven activities for teachers em-phasizes displays, women speakers, and videos. A copy of the congressional resolution designating the month of March as "Women's History Month" is included. (FMW)

ent Materials, *Parent Participation, Parent School Relationship, *School Effectiveness, School Relationship, *School Restructuring

An inevitable tension exists between what parents want for their own child and the educational oppor-tunities that schools now provide for all children. This handbook shows parents and policymakers how to cooperatively improve schools for all children by explaining effective educational practices and suggesting educational policy reforms. Schools and school policies are analyzed from the following perspectives: (1) culture; (2) learning; (3) the class perspectives: (1) culture; (2) tearning; (3) the class-room; (4) valued-knowledge; (5) evaluation and sorting; (6) special needs; (7) parent involvement; and (8) school reform. Each perspective offers a broad understanding of the following issues: (1) how the overall organization and atmosphere of a school affect students' opportunities to learn; (2) how class-room environments affects students' self-esteem; (3) how various classroom techniques affect how students learn the most important subjects; and (4) how the home environment affects school success. Recommendations are made for educational policy reform, based on democratic values and educational research. Each chapter includes suggestions for fur-ther reading. An index is appended. (FMW)

The positive correlation between higher educational attainment and lower unemployment is as strong for females as for males. However, analysis of statistical data on female workers drawn from the National Longitudinal Samples (NLS), and compar-ison with the findings of an earlier study on the relationship between educational attainment and unemployment for males, point to the following sex differences: (1) educational differences in onthe-job training are related to low turnover among men; (2) educational differences in labor force attachment are related to low turnover among women; (3) educational differences in the duration of unemployment are negligible among females; and of unemployment are negligible among remaies; and (4) educational differences in the duration of unemployment among males are small but observable. Recent growth in women's work attachment has reduced their inter-labor force turnover and their unemployment rate to the point of eliminating the confidence of the properties of the proper sex differential. On-the-job training of women ap-pears to have increased but it still remains skimpy. Statistical data on 13 tables are included. A list of 12 references and statistical data on five tables are appended. (FMW)

Analysis of statistical data on the white male labor force drawn from the Panel Study of Income Dynamics (PSID) indicates that the reduction of the incidence of unemployment is far more important than the reduced duration of unemployment rates. The cational differentials in unemployment rates. The lower unemployment incidence of the more edulower unemployment incidence of the more edu-cated workers is due equally to their greater attach-ment to the firms employing them and the lower risk of becoming unemployed when separated from the firm. The lower frequency of job turnover of more educated workers, which creates fewer episodes of unemployment, is in large part attributable to more on-the-job training. The following factors may ex-plain the lower conditional unemployment of edu-cated workers and the somewhat shorter duration of their unemployment: (1) more educated workers aptheir unemployment: (1) more educated workers ap-pear to search for new employment while already pear to search for new employment while already employed, which is less costly than searching for employment while unemployed; (2) more educated workers are more efficient in acquiring and processing job search information; and (3) firms and workers search more intensively to fill more skilled vacancies. Statistical data on seven tables are included. Discussions of two of the equations used in the control of the equations used in the control of the expensive are a nemeded. the analysis and a list of 24 references are appended. (FMW)

City-as-School (CAS) is an alternative high school linking students to various out-of-school learning experiences throughout New York City. In 1985, CAS was awarded a National Diffusion Network (NDN) 4-year replication grant to dissemi-nate the model to other schools and districts nate the model to other schools and districts throughout the country. During 1988/89, its fourth year of implementation, CAS/NDN sought to replicate its model at 12 sites in different parts of the country, focusing special attention on at-risk students. Objectives included follow-up activities at the sites, development of materials for in-service teacher education, and modified "turn-key" training of replicator staff to become disseminators the meeting. This evaluation found that the resiser's themselves. This evaluation found that the project's ongoing outreach efforts, focus on at-risk students, and in-service training objectives were achieved. The remaining objectives were only partially met due to limitations of time and resources. The followdue to imitiations of time and resources. The follow-ing recommendations for improvement are sug-gested: (1) develop a plan for monitoring the progress of replicators at each site; (2) develop as-sessment measures based on student behavior, such as credits earned and attendance; (3) continue efforts to develop new disseminators in a large number of states and a higher number of inner-city schools; (4) attract more ninth- and tenth-grade students to the program; and (5) continue to update the program and develop financial independence. The Chicago public school system has a 50 per-The Chicago public school system has a 50 per-cent dropout rate, low-achieving students, a nonre-sponsive bureaucracy, and many related urban school problems. The Chicago School Reform Act, PA 85-1418, was enacted by the Illinois legislature in 1989 to address the situation. To determine the effectivenes of the Chicago school perform moveeffectiveness of the Chicago school reform movement thus far, 100 Chicago teachers in 10 schools were surveyed. The responses indicate that no gains have been made in student achievement, school discipline, teacher morale, collegiality, school climate, teacher involvement in decision making, or job sat-isfaction. Most teachers agree that smaller class size, more security, reduced paperwork, more in-structional materials, and higher teacher salaries would improve student achievement and working conditions. Teachers are not optimistic about the Local School Councils (each composed of six parents, two community representatives, and one principal) created to decentralize school administration. The results of the survey are presented in tables. A bibliography of 11 items follows. (DM)

National dropou figures hover around 46 percent, according to the U.S. Office of Education. School according to the U.S. Office of Education. School business partnerships, including occupational training, counseling, and preemployment experience, have been effective in reducing the dropout rate in many schools. The use of computers in teaching traditional subjects has proved attractive to students, especially if the software includes colorful graphics and sound effects. Another aspect of the dropout problem has been addressed by drug prevention programs in schools, and by pull-out programs for pregnant girls, who drop out at a rate of 80 to 90 percent nationally. Such a program in Seattle provided child care instruction, social services, counseling, and health education. Most of the programs described here have increased retention but grams described here have increased retention but have not made a great difference in the number of dropouts. Schools with lower dropout rates have been found to have stronger leadership, a more disciplined atmosphere, more dynamic instruction, and more student-teacher interaction. Opponents of diverse (alternative) curriculums argue that such programs deny access to the common culture to those who need it most-the disadvantaged. A bibli-ography of 15 items is included. (DM)

Community Councils
This document combines a facilitator's manual designed to train candidates for Local School Councils (LSCs) and others who want to improve Chi-cago (Illinois) schools with fact sheets, worksheets, checklists, and case studies (in English and Spanish) to be used by participants in the leadership training program. The following goals are outlined in the facilitator's manual: (1) teach participants to put children first in all their decisions; (2) build a commitment among participants to reach a consensus on key decisions whenever possible, rather than just a winning majority; (3) teach participants the ingredients of effective urban schools and show the how they can make their local schools effective; (4) teach participants the contents of the Chicago School Reform Act and how to use the Act to turn their schools into effective schools; (5) show participants how to use the school improvement planning process included in the Act as the first step towards making their schools effective schools; and (6) teach participants about other available resources, includ-ing additional training and workshops. The manual ing additional training and worksnops. The manual provides step-by-step instructions to conduct three 3-hour training sessions, each comprised of a number of activities. The following information for each of the 20 activities is included: (1) time limit; (2) objectives; (3) materials list; (4) directions for conobjectives; (3) materials list; (4) directions for conducting the activity, including sample scripts; and (5) facilitator tips. The companion volume of participant resource materials covers the following topics: (1) the Chicago School Reform Act (CSRA); (2) School Organization; (3) characteristics of an effective school; (4) group dynamics; (5) priorities for parent and community involvement; (6) the LCS-principal relationship; (7) teacher role; (8) decision-making; (9) differences in school organization, the conductive school organization of the conductive school organization of the conductive school organization or the conductive school organization cision-making: (9) differences in school organiza-tion before and after passage of the CSRA; (10) the school improvement process; (11) school environ-ment; (12) discipline; (13) interviewing school personnel; (14) truancy and dropouts; and (15) the process of learning to read. One table of statistical data, five illustrations, and a school reform timeline are included. A resource directory of 55 community organizations active in school reform and a workshop evaluation form are appended. (FMW)

This evaluation assessed Linking Lin a demonstra-

This evaluation assesses Linking Up, a demonstration program investigating the process and conse-quences of mentoring. The program matched seventh- and eighth-graders with adult mentors in a small, rural junior-senior high school and an urban junior-senior high school. Student participants were selected to reflect the risk levels of each school's enrollment. Neither the program nor the associated studies achieved the magnitude originally intended because recruiting, training, and matching mentors required more time and staff resources than planned. A process evaluation that monitored the formation of mentoring relationships found that about half of the student/mentor pairs were not meeting regularly because of problems with sched-uling, transportation, communication, and/or mentor expectations. The following conclusions are reported: (1) mentors should be recruited in large groups; (2) programs should only focus on at-risk students; (3) mentors need clear goals; (4) the most functional mentor goal is building student competence; (5) mentors need continuing support; (6) programs encounter the same barriers that prevent the development of natural mentoring relationships; (7) mentoring early adolescents needs a context other than career development or "big sibling"; and (8) mentoring is worthwhile. A description of program personnel, a review of the literature on mentoring, and a list of 38 references are appended. (FMW)

This document suggests an agenda for restructuring New York City elementary schools and improving their leadership, based on interviews with 25

ing their leadership, based on interviews with 25 inner-city elementary school principals. Participants were selected on the basis of their competence and their commitment to the education of economically disadvantaged students. The following polic and action options for restructuring are emphasized

(1) collaboration of school and nonschool groups to foster a unified approach; (2) focus on success for all children and changing teaching practices; (3) ade-quate time, funds, and technical assistance for restructuring activities; (4) reducing school size; (5) linkage of governance to restructuring; and (6) provision of an adequate budget. The following policy options for the selection, support, and removal of principals are emphasized: (1) development of leadership criteria; (2) improvement of the selection process, including involvement of parents, teachers, and civic groups; (3) long-range development of fu-ture principals; (4) support for new and experienced principals, including increased support staffs; (5) deemphasis of paperwork and bureaucratic procedures; and (6) development of a new framework and procedure for removing principals. Identifiers-Congress 101st, *Elementary Second-

ary Education Act, Proposed Legislation This report recommends that the House of Representatives pass the School Dropout Prevention and Basic Skills Improvement Act of 1990. The bill would amend the Elementary and Secondary Education Act of 1965 to improve secondary school programs for basic skills improvement, dropout prevention, and dropout reentry by strengthening reporting requirements and altering fiscal allocations. Local school districts and states would be required to submit plans describing how they will increase graduation rates and annual reports on progress toward decreasing dropout rates. Funds would be allocated for replication and dissemination of sucallocated for replication and cussemination of suc-cessful dropout programs. Funds would also be allo-cated for community based organizations to establish and operate Community Education and Employment Centers (CEECs) to serve at-risk youth with comprehensive academic and vocational-technical education programs. CEECs would also provide the following special courses: (1) health; (2) safety; (3) nutrition; (4) parenting; and (5) environmental issues. The following on-site services would be included: (1) career guidance; (2) employment counseling; (3) labor market information; (4) job placement; (5) mentoring; (6) referral to social services; and (7) parent counseling. CEECs should provide transportation and day care, and emphasize participation by parents and community representatives. The bill also requires the Secretary of Education to create an information base on dropout prevention. A section-by-section analysis of the amendments is included. (FMW)

Educating disadvantaged students will demand a

Educating disadvantaged students will demand a national commitment to increasing the resources devoted to the task, restructuring the schools in which the disadvantaged are educated, and con-ducting research needed to make those schools more effective. Educationally disadvantaged stu-

dents have been exposed to insufficient educational experiences in school, at home, and/or in their com-munity. They may comprise 35-40 percent of the munity. They may comprise 35-40 percent of the student population, and share one or more of the following characteristics: (1) minority group membership; (2) poverty; (3) single-parent families; (4) poorly educated mothers; and (5) limited English proficiency. Their numbers are projected to increase rapidly, with catastrophic consequences for the social and economic well-being of the nation. A review of the effectiveness of existing federal and local perinatal health care and preschool, kindergarten, and elementary school programs for the disadvantaged indicates that their positive outcomes fade quickly over time or that their scope is inadequate for the number of disadvantaged students and the severity of their problems. The effectiveness of most severity of their problems. The effectiveness of most secondary school programs has not been systemati-cally evaluated. Each level of the educational system must have the capacity to gather systematic student data in order to use resources effectively. The following strategies for restructuring schools to the tolowing strategies for restrictant genous control to better gather and use that data are suggested: (1) flexible rules and programs; (2) goal setting and monitoring to increase individual autonomy; (3) self-contained teaching/learning units; (4) "slack" in staff resources; (5) more effective hierarchies; (6) heidding the staff of the st bridging or lateral relationships; and (7) more so-phisticated vertical information systems. An index, brief biographies of the authors, and a list of 515 notes and references are appended. (FMW)

The focus of federally-funded bilingual education programs has shifted over the past 20 years from serving educationally disadvantaged limited En-glish proficient (LEP) students to serving recent immigrants and identifying alternatives to bilingual education. Since the 1960s, the LEP student popueducation. Since the 1900s, the LEF student population has grown increasingly diverse, illiterate, and economically disadvantaged. The following research and program elements are currently being emphasized: (1) reducing the number of at-risk students. dents; (2) developing literacy in the native language; (3) separating native and second language use; (4) developing cognitive/academic language profi-ciency; (5) viewing students as active learners; (6) using holistic approaches and themes; (7) develop-ing communicative competence; and (8) grouping students for collaborative work. The following implementation issues confront bilingual education in the 1990s: (1) the need to integrate instructional innovations into the bilingual education framework;
(2) the need to examine the effect of state education agency prescriptions on LEP students; (3) the need to address the use of student testing to sort, label, and make noninstructional decisions; (4) the need to examine the effect of state procedures on minority and poor students; and (5) the need to assist Hispanic and bilingual teachers to qualify for a teaching degree. Two charts comparing program trends and emphases, a chart illustrating the growth of minority groups, and a list of 28 references are appended. (FMW)

Background, Parent Role, Research Reports,

Background, "Farent Roie, Research Reports, Secondary Education Half of all Hispanics living in the United States aged 25 or over have not finished high school. According to the 2-year longitudinal study from which this report is drawn, 64.4 percent of the 700 ninth-grade students in the sample reported that their fathers or stepfathers did not complete high their fathers of stepfathers did not complete high school. For mothers and stepmothers, the percent-age is 63.0. The language of greater comprehension of the majority of Hispanic parents is Spanish. Typi-cally, their jobs do not allow them the flexibility to attend meetings or teacher conferences. Although the parents value education and encourage effort, they are unable to assist their children with home-work or provide basic resources for study at home. It is recommended (1) that educational agencies collect more accurate data on Hispanics by origin; (2) that the problems of Hispanic parents be addressed; (3) that typewriters, calculators, dictionaries, and tutoring assistance be supplied; and (4) that the data in the present study be expanded and con-tinued in order to track this cohort of students through their school careers. "Talent Identification"

The underrepresentation in gifted programs of students who are members of minority or other groups warrants increased attention from educators. With the continuing quest for both equity and excellence in public education, there is a renewed interest in ensuring the participation of minority students in gifted programs and in bridging the gap between research and practice. This publication is designed as a resource to assist school administrators and directors of gifted and talented programs in their efforts to increase the participation of minority stu-dents. It includes the following: (1) statistics reflect-ing underrepresentation of minority students; (2) ing underrepresentation of minority students; (2) definitions of giftedness; (3) identification issues and recommendations; (4) descriptions of suggested practices and alternative procedures; (5) recommendations for increasing the participation of minority students; (6) a 38-item bibliography; (7) a 23-item service of expected predictions (9) bits of 32-item matrix of selected readings; (8) a list of professional training programs in gifted education; and (9) five charts that illustrate the text. (MYM)

Subject Index

This index lists titles of documents under the major subject terms that have been assigned to characterize their contents. The subjects, which conform to those presented in the Thesaurus of ERIC Descriptors and the Identifier Authority List, are in word-by-word alphabetical order.

As shown in the examples below, the accession number is displayed below and to the right of the document title. Additional information about the document can be found under that number in the resume section.

The symbol // appearing after an accession number identifies a document that is not available from the ERIC Document Reproduction Service and that is not in the ERIC Microfiche Collection.

Author Index

This index lists documents under the name(s) of their author(s). The index is arranged in alphabetical order by the person's last name.

As shown in the example below, the accession number is displayed below and to the right of the title. Additional information about the document can be found under that number in the resume section.

The symbol // appearing after an accession number identifies a document that is not available from the ERIC Document Reproduction Service and that is not in the ERIC Microfiche Collection .

Institution Index

This index lists the titles of documents under the institution responsible for them and/or the agency sponsoring them. The index is arranged in alphabetical sequence by the name of the university, agency, association, etc. Names beginning with the word "University" have generally been inverted in order to provide a more distinctive entry, e.g. Wisconsin University (for the University of Wisconsin).

As shown in the example below, the accession number is displayed below and to the right of the title. Additional information about the document can be found under that number in the resume section.

The symbol // appearing after an accession number identifies a document that is not available from the ERIC Document Reproduction Service and that is not in the ERIC Microfiche Collection.

Publication Type Index

This index lists documents under the Publication Type that has been assigned to them to characterize their form or organization, as contrasted to their subject matter.

As shown in the example below, the accession number is displayed below and to the right of the document title. Additional information about the document can be found under that number in the resume section. The symbol // appearing after an accession number identifies a document that is not available from the ERIC Document Reproduction Service and that is not in the ERIC Microfiche Collection.

The Publication Types are displayed in a classified index arrangement, according to the outline below.

Policy and Pro-cedural Guidelines for the Education of Students with Special Needs in the Public School System Education de l'enfance en difficulte au Mani-toba. Lignes directrices concernant les eleves qui ovt des besions speciaux et qui frequentent les ecoles publiques.

ED 323 694

Clearinghouse Number/ED Number Cross-Reference Index

This index cross-reference the temporary ERIC Clearinghouse accession number to the permanent ERIC Document (ED) accession numbers by which resumes are arranged in *Resources in Education* (*RIE*). Readers who have only Clearinghouse numbers for a given document may use this index to trace the item to this ED number and hence to its location in *RIE*.

The symbol // appearing after an accession number identifies a document that is not available from the ERIC Document Reproduction Service and that is not in the ERIC Microfiche Collection.

The following Clearinghouse prefixes are used in this index.

AA	_	ERIC Processing and Reference Facility	JC	_	Junior Colleges
		Adult, Career, and Vocational Education			Elementary and Early Childhood Education
CG	-	Counseling and Personnel Services			Rural Education and Small Schools
CS	-	Reading and Communication Skills			Science, Mathematics, and Environmental

THESAURUS ADDITIONS AND **CHANGES**

All new Descriptors and other *Thesaurus* changes previously listed here are now included in the new 1990 *Thesaurus of ERIC Descriptors* (12th edition). The 1990 edition reflects all updates to the *Thesaurus* file through April 1990, including 282 new Descriptors and many other changes since the 1987 (11th) edition was published. New Descriptors, deleted Descriptors, scope note modifications, etc., implemented in the *Thesaurus* beyond April 1990 will continue to be listed in this *Thesaurus* Additions and Changes section in order to bring them to the attention of users.

Significant features of the new edition are:

Sturdy cloth, reinforced binding, designed to withstand continuous, heavy use.
 282 new Descriptors and 264 new USE references.

HOW TO ORDER RESOURCES IN EDUCATION (RIE)

Resources in Education (RIE) is a monthly abstract journal covering the document literature of education. It is published for the U.S. Department of Education by the U.S. Government Printing Office (GPO). RIE consists of twelve (12) monthly issues (each announcing over 1000 documents and indexing them by Subject, Institution, Personal Author, and Publication Type) and two (2) cumulative semiannual indexes (Jan-June, July-Dec). RIE is sold by GPO on subscription or as individual issues on-demand. Stock is retained for only approximately six months; issues older than that are generally not available from GPO. Orders from foreign sources cost 25% additional, as shown in the table below.

RIE Product (Master Stock No. 756-003-00000-8)	Domestic	Foreign
Subscription to Monthly Issues (12 iss.) — Single Copy On-Demand (1 iss.)	\$66.00 15.00	\$82.50 18.75
Subscription to Semiannual Index (2 iss.) — Single Index On-Demand (1 iss.)	20.00 15.00	25.00 18.75

Mail Orders: Check or money order (full remittance required) made payable to

"Superintendent of Documents."

Mail to: Superintendent of Documents U.S. Government Printing Office Washington, DC 20402-9371

Telephone Acceptable credit cards are: Choice, Mastercard, or VISA. Orders:

You may also charge against your pre-paid GPO deposit account,

if available.

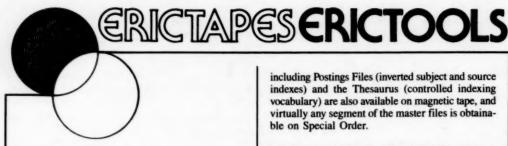

Call: 202-783-3238 (Note: This is not an FTS or AUTOVON line)

Customer Publication service section (inquiries about a publication Service: order): 202-275-3050

> Subscription research section (inquiries about a subscription order): 202-275-3054

Deposit account section (inquiries about deposit accounts): 202-275-2481

Depository libraries should contact: 202-275-1006 (Library Programs Service)

HAVE A COMPUTER?

LOOK AT ERICTAPES!

The Educational Resources Information Center (ERIC) database is available on magnetic tape in a variety of options. Under special authorization from the U.S. Department of Education, these tapes are offered at unusually low cost to encourage the widest possible dissemination.

The ERIC database provides coverage of the significant literature in the field of educational resources. Report literature (announced in Resources in Education (RIE)) is covered from 1966 to date; journal article literature (announced in Current Index to Journals in Education (CIJE)) is covered from 1969. Monthly, quarterly, and annual updates are available for both RIE and CIJE, so that the files may be kept current.

The basic files are available in the ERIC Format (IBM/OS variable length records). These files include the complete resume (document description, indexing, and abstract or annotation) of each document or journal article announced, in accession number order. A variety of peripheral files, including Postings Files (inverted subject and source indexes) and the Thesaurus (controlled indexing vocabulary) are also available on magnetic tape, and virtually any segment of the master files is obtainable on Special Order.

The files may be purchased individually or on annual subscription. The files are written on new, high quality, 9-track tapes (600, 1200, or 2400-ft., as appropriate) at either 1600 or 6250 BPI and are guaranteed. Prices per tape reel start as low as \$75.

NO COMPUTER?

LOOK AT ERICTOOLS!

For organizations without access to a computer,* ERICTOOLS provide manual access to the ERIC document collection. ERICTOOLS are a series of printed indexes, directories, and cross-reference lists, distributed internally to components of the ERIC network. The Title Index provides access by document title. The Source Directory provides access to all organizational names used in the system, i.e., corporate authors and sponsoring agencies. Crossreference lists lead the inquirer to the accession number (ED number) from: Report Number; Contract Number; and Clearinghouse Accession Number.

ERICTOOLS are available individually and on annual subscription. Prices start from as low as \$20 for some individual documents.

* Many of these documents are also valuable tools for computer searchers.

For additional information, complete and mail the reply form or call: ERICTAPES/ERICTOOLS, 2440 Research Boulevard, Suite 400, Rockville, Maryland 20850, (301) 258-5500

Toll-Free 800 Number Makes Education Information Accessible

ACCESS ERIC is your gateway to the Educational Resources Information Center (ERIC), a nationwide information service designed to make education literature readily accessible.

With its toll-free number, **1-800-USE-ERIC**, ACCESS ERIC makes it easy for you to locate and obtain education information. One call puts you in touch with information specialists who can answer questions about ERIC, refer you to subject-specific information sources, and provide education-related publications produced by ERIC.

Sponsored by the U.S. Department of Education, Office of Educational Research and Improvement, ERIC helps teachers, librarians, students, parents, researchers, and policymakers stay abreast of the most important developments in the education field. Through ERIC, you can access information on a wide range of subjects.

In addition, ACCESS ERIC recently introduced four reference and referral databases to guide you through the vast world of education information. These databases are also available as print directories.

- ERIC Digests Online--Synthesizes information for you and includes more than 470 full-text ERIC Digests (two-page summaries) on current topics in education.
- ERIC Information Service Providers--Lists nearly 1,000 agencies, such as libraries and information centers, that provide computerized searches of the ERIC database, have a sizable collection of ERIC microfiche, or subscribe to and collect ERIC hard-copy reference tools.
- Education-Related Information Centers--Helps you quickly locate agencies knowledgeable about your subject needs. Describes more than 200 resource centers that cover a broad range of education-related topics and provide user services, technical assistance, and information dissemination.
- Education-Related Conferences--Presents nearly 500 international, national, State, regional, and local education-related conferences covering the entire calendar year.

And, to help you stay up to date on a broad range of education-related issues, ACCESS ERIC offers <u>free</u> subscriptions to *The ERIC Review*. You can also order copies of *A Pocket Guide to ERIC* and other resources to help you access and use ERIC.

Gain entry to a world of education literature. For more information, call 1-800-USE-ERIC, Monday to Friday, 8:30 a.m.-5:30 p.m. (eastern time), or write:

ACCESS ERIC 1600 Research Boulevard Rockville, MD 20850

MAJOR VENDORS OF ERIC ONLINE SERVICES AND CD-ROM PRODUCTS (ADDRESSES AND TELEPHONE NUMBERS)

The ERIC database is one of the most widely used bibliographic databases in the world. Users from 90 different countries perform nearly half a million searches annually of the database.

The ERIC database currently can be searched via five major online and CD-ROM vendors (listed below). Those wishing to search ERIC online need a computer terminal that can link by telephone to the vendor's computer and a subscription with one or more vendors.

In addition, the *Directory of ERIC Information Service Providers* lists the addresses, telephone numbers, and ERIC collection status for more than 900 organizations that perform searches for ERIC users. To order a copy of the *Directory*, call any ERIC component.

ERIC Network Components

There are currently sixteen (16) ERIC Clearinghouses, each responsible for a major area of the field of education. Clearinghouses acquire, select, catalog, abstract, and index the documents announced in *Resources in Education (RIE)*. They also prepare interpretive summaries and annotated bibliographies dealing with high interest topics and based on the documents analyzed for *RIE*; these information analysis products are also announced in *Resources in Education*.

ERIC Clearinghouses:

ADULT, CAREER, AND VOCATIONAL EDUCATION (CE)
